SUBJECT: Filing of Notice of Determination in compliance with Section 21108 or 21152 of the Public Resources Code.

State Clearinghouse Number (if submitted to State Clearinghouse): 2021020329

Project Title: Lake Forest Zone B to C Pump Station Project

Project Applicant: Irvine Ranch Water District

Project Location (Include county): Lake Forest Drive and Portola Parkway/El Toro Road; City of Lake Forest/Orange County

Project Description:

IRWD is proposing to construct a new pump station to improve the water quality within IRWD's Zone B to C recycled water system. In addition to the construction of the new Zone B to C Recycled Water Pump Station, the Project would decommission the existing Zone B to C Pump Station, which is located adjacent to the existing IRWD Zone B East Reservoir. The existing pump station has exceeded its useful service life and is not a standard, fully enclosed, IRWD pump station. The demolition of the existing Lake Forest Zone B to C Pump Station would occur after the construction of the proposed new pump station. The proposed Project would also develop a new intertie between the Upper Oso Reservoir and the Lake Forest Zone C distribution system. The intertie meter would be located along Portola Parkway, between El Toro Road and Saddleback Parkway. Construction of the proposed intertie would occur within the third and fourth southbound lanes of travel along Portola Parkway. The proposed intertie would provide the ability to isolate Upper Oso Reservoir from IRWD's recycled water distribution system. The proposed intertie would be closed during normal operations, but would be available to augment recycled water supplies into IRWD's Lake Forest Zone C system during maintenance operations of the IRWD system or to deliver excess recycled water flow to Santa Margarita Water District (SMWD) during low-demand periods.

This is to advise that the Irvine Ranch Water District has approved the above
 Lead Agency or Responsible Agency

described project on April 12, 2021 and has made the following determinations regarding the above
 (date)
 described project.

1. The project [will will not] have a significant effect on the environment.
2. An Environmental Impact Report was prepared for this project pursuant to the provisions of CEQA.
 A Negative Declaration was prepared for this project pursuant to the provisions of CEQA.
3. Mitigation measures [were were not] made a condition of the approval of the project.
4. A mitigation reporting or monitoring plan [was was not] adopted for this project.
5. A statement of Overriding Considerations [was was not] adopted for this project.
6. Findings [were were not] made pursuant to the provisions of CEQA.

SECTION 1

INTRODUCTION

In accordance with the California Environmental Quality Act (CEQA) and the *Guidelines for California Environmental Quality Act (State CEQA Guidelines)*, Irvine Ranch Water District (IRWD) is the Lead Agency for the Lake Forest Zone B to Zone C Pump Station Project (proposed Project). This document is the Final Initial Study/Mitigated Negative Declaration (IS/MND) for the proposed Project.

The purpose of the Final IS/MND is to document that IRWD, as the Lead Agency, has considered all comments regarding the environmental information and analyses contained in the Draft IS/MND received during the public review process as required by the *Guidelines for State CEQA Guidelines*, Section 15074(b).

No significant changes have been made to the information contained in the IS/MND as a result of the responses to comments, and no significant new information has been added that would require recirculation of the document. Information provided in this Final IS/MND clarifies, amplifies, or makes minor modifications to the Draft IS/MND.

This document includes an introduction (Section 1), responses to comments received during the public review period (Section 2), and the final IS checklist (Section 3). Section 3 of this document provides a revised/final version of the IS/MND to make minor corrections and clarifications to the public Draft IS/MND as a result of comments received during the public review period. Revisions to the public Draft IS/MND are shown in track changes in Section 3 of this document. Text that has been added is underlined (underlined) and text that has been deleted is shown with strikeout (~~strikeout~~).

The Final IS/MND will be submitted for the consideration of the IRWD Board of Directors. The Board of Directors will have the final decision on whether to adopt the Final IS/MND and approve the proposed Project.

PUBLIC REVIEW PROCESS

Pursuant to *State CEQA Guidelines*, Section 15073, a Notice of Intent (NOI) to adopt an MND was sent to responsible agencies and trustee agencies in addition to various public agencies and interested individuals concerned with the proposed Project.

The NOI and the IS/MND were circulated for public review for a period of 30 days, from February 18, 2021 through March 19, 2021. Copies of the Draft IS/MND were made available for public review on IRWD's website. As stated above, the NOI was sent to responsible agencies and trustee agencies in addition to various public agencies and interested individuals concerned with the proposed Project.

INDEX OF COMMENTS RECEIVED

The following is a list of the written comments received on the Draft IS/MND prior to the close of the public comment period or immediately thereafter. Each comment letter received is indexed with a number. Responses to each of the comment letters are provided on the following pages. The comment index numbers are provided in the upper right corner of each comment letter, and individual points within each letter are numbered along the right-hand margin of each letter. IRWD's responses immediately follow each letter and are referenced by the index numbers in the margins.

Subject: Notice of Intent to Adopt a Mitigated Negative Declaration– Lake Forest Zone B to C Pump Station Project

Dear Jo Ann Corey:

Thank you for the opportunity to review the subject document. The Orange County Fire Authority (OCFA) provides fire protection and emergency medical services response to 23 cities in Orange County and all unincorporated areas. The OCFA operates 77 fire stations throughout Orange County, several within Irvine and Lake Forest, which includes the project area. Services include: structural fire protection, emergency medical and rescue services, education and hazardous material response. OCFA also participates in disaster planning as it relates to emergency operations, which includes high occupant areas and school sites and may participate in community disaster drills planned by others. Resources are deployed based upon a regional service delivery system, assigning personnel and equipment to emergency incidents without regard to jurisdictional boundaries. The equipment used by the department has the versatility to respond to both urban and wildland emergency conditions.

1

There are no comments. We believe this project will have Less Than Significant Impact with Fire Service.

2

Thank you for providing us with this information. Please contact me at 714-573-6253 if you have any questions.

3

Sincerely,

Robert J Distaso PE
Fire Safety Engineer

REGIONAL AGENCY: Orange County Fire Authority (OCFA)

LETTER CODE: R-1

COMMENTER: Robert Distaso, Fire Safety Engineer

DATE: March 7, 2021

RESPONSE R-1-1

This comment provides a brief summary of OCFA services.

This comment does not contain any substantive comments or questions about the Draft Initial Study/Mitigated Negative Declaration (IS/MND) or the analysis therein. No further response is necessary.

RESPONSE R-1-2

This comment states that OCFA concurs with the finding in the Draft IS/MND that the proposed Project would have a less than significant impact related to fire service.

Analysis regarding fire services can be found in Section 4.15 of the Draft IS/MND. IRWD thanks OCFA for their concurrence with the analysis in the IS/MND.

RESPONSE R-1-3

The comment concludes the letter.

This comment does not contain any substantive comments or questions about the Draft IS/MND or the analysis therein. No further response is necessary.

Mitigated Negative Declaration (MND) for the Proposed Lake Forest Zone B to C Pump Station Project (Proposed Project)

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. The following comments are meant as guidance for the Lead Agency and should be incorporated into the Final MND. 1

The Lead Agency proposes to demolish an existing water pump station, and build a 1,791-square-foot water pump station with a capacity of 2,250 gallons per minute and a water management intertie system on 0.41 acres (Proposed Project). Based on a review of the MND and supporting technical documentation, South Coast AQMD staff found that the Proposed Project would include the use of one standby emergency generator with a diesel engine of 315 brake horsepower (bhp). However, the Lead Agency did not identify South Coast AQMD as a Responsible Agency for the standby emergency generator in the MND. Internal combustion engines with a manufacture's rating of greater than 50 bhp require permits from South Coast AQMD. Therefore, the Lead Agency should identify South Coast AQMD as a Responsible Agency for the Proposed Project in the Final MND (CEQA Guidelines Section 15381). Impacts from the permits need to be fully and adequately evaluated and disclosed as required under CEQA Guidelines Section 15096(b). The assumptions in the air quality analysis in the Final MND will be used as the basis for evaluating the permits under CEQA and imposing permit conditions and limits. Questions on permits should be directed to South Coast AQMD's Engineering and Permitting staff at (909) 396-3385. 2

Conclusion

Pursuant to CEQA Guidelines Section 15074, prior to approving the Proposed Project, the Lead Agency shall consider the MND for adoption together with any comments received during the public review process. Please provide South Coast AQMD with written responses to all comments contained herein prior to the adoption of the Final MND. When responding to issues raised in the comments, responses should provide sufficient details giving reasons why specific comments and suggestions are not accepted. There should be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information do not facilitate the purpose and goal of CEQA on public disclosure and are not meaningful, informative, or useful to decision makers and the public who are interested in the Proposed Project. Please contact me at lsun@aqmd.gov, should you have any questions. 3

Sincerely,

Lijin Sun

REGIONAL AGENCY: South Coast Air Quality Management District (SCAQMD)

LETTER CODE: R-2

COMMENTER: Lijin Sun, Program Supervisor, CEQA IGR

DATE: March 16, 2021

RESPONSE R-2-1

The comment provides introductory statements. This comment does not contain any substantive comments or questions about the Draft IS/MND or the analysis therein. No further response is necessary.

RESPONSE R-2-2

The comment states that the proposed Project would include the use of one standby emergency generator with a diesel engine of 315 brake horsepower (bhp). The comment further states that internal combustion engines with a manufacturer's rating of greater than 50 bhp require permits from SCAQMD, and therefore requests that the Final IS/MND be revised to include SCAQMD as a Responsible Agency.

Section 15096(b) of the *State CEQA Guidelines* outlines the appropriate response to consultation that should be followed by Responsible Agencies during the environmental review process. It does not address analysis of permits.

As defined in Section 15381 of the *State CEQA Guidelines*, a Responsible Agency is a public agency that proposes to carry out or approve a project for which a Lead Agency is preparing or has prepared an Environmental Impact Report (EIR) or Negative Declaration. For the purposes of CEQA, the term "Responsible Agency" includes all public agencies other than the Lead Agency that have *discretionary approval* power over the proposed project. In contrast, according to Section 15369 of the *State CEQA Guidelines*, *ministerial permits* are those permits involving little or no personal judgement by the public official as to the wisdom or manner of carrying out the proposed project. The public official merely applies the law to the facts as presented but uses no special discretion or judgement in reaching a decision. A ministerial decision involves only the use of fixed standards or objective measurements, and the public official cannot use personal, subjective judgement in deciding whether or how the project should be carried out.

Although permits for construction and operation of the emergency generator will be coordinated with SCAQMD, both permits would be ministerial. Therefore, SCAQMD is not a Responsible Agency, and the IS/MND adequately addressed ministerial actions in Section 2.9.2 and specifically addressed potential impacts associated with operation of the generator in Sections 4.3, Air Quality, 4.6, Energy, and 4.8, Greenhouse Gas Emissions.

RESPONSE R-2-3

The comment requests that SCAQMD be provided with written notices to the Response to Comments prior to the adoption of the Final IS/MND. The comment also states that responses to comments should provide sufficient detail as to why specific comments and suggestions are not

accepted, and that responses to comments should be supported by factual information in the interest of public disclosure.

Pursuant to *State CEQA Guidelines*, Section 21092.5(a), a lead agency is required to provide written responses to a public agency on comments made only on EIRs. As stated in the Notice of Determination, the responses to comments will be available with the Final IS/MND on IRWD's website: <https://www.irwd.com/doing-business/environmental-documents>. Further, the responses to comments contained herein were prepared in accordance with *State CEQA Guidelines* Section 15088(c). No further response is necessary.

SR 241 PM 22.454

Dear Ms. Corey,

Thank you for including the California Department of Transportation (Caltrans) in the review of the Mitigated Negative Declaration (MND) for the Lake Forest Zone B to C Station Project in the Irvine Ranch Water District. The mission of Caltrans is to provide a safe, sustainable, integrated and efficient transportation system to enhance California's economy and livability.

1

The Irvine Ranch Water District (IRWD) is proposing to construct a new pump station to improve the water quality within IRWD's Zone B to C recycled water system. In addition to the construction of the new Zone B to C Recycled Water Pump Station, the Project would decommission the existing Zone B to C Pump Station, which is located adjacent to the existing IRWD Zone B East Reservoir. The existing pump station has exceeded its useful service life and is not a standard, fully enclosed, IRWD pump station. The demolition of the existing Lake Forest Zone B to C Pump Station would occur after the construction of the proposed new pump station. The proposed Project would also develop a new intertie between the Upper Oso Reservoir and the Lake Forest Zone C distribution system. The proposed intertie would provide the ability to isolate Upper Oso Reservoir from IRWD's recycled water distribution system. The proposed intertie would be closed during normal operations but would be available to augment recycled water supplies into IRWD's Lake Forest Zone C system during

2

Irvine Ranch Water District
March 18, 2021
Page 2

maintenance operations of the IRWD system or to deliver excess recycled water flow to Santa Margarita Water District (SMWD) during low-demand periods.

The Project site is located in the City of Lake Forest and in the County of Orange. Regional access to the Project site is provided by State Route 241 (SR 241), located north of the proposed Project, and by Interstate 5 (I-5), located southwest of the proposed Project. The proposed pump station would be located on a 0.413-acre site between 20381 Lake Forest Drive and 20411 Lake Forest Drive at the former Lake Forest Well No. 5 site. Adjacent land uses include commercial use to the west, business park use to the east, regional park/open space to the north, and transportation corridor use to the south. In addition to the construction of the new Zone B to C Recycled Water Pump Station, the Project would decommission the existing Zone B to C Pump Station, which is located adjacent to the existing IRWD Zone B East Reservoir. The proposed Project would also develop a new intertie between the Upper Oso Reservoir and the Lake Forest Zone C distribution system. The intertie meter would be located along Portola Parkway, between El Toro Road and Saddleback Parkway. Construction of the proposed intertie would occur within the third and fourth southbound lanes of travel along Portola Parkway. SR 241 is owned and operated by Caltrans. Caltrans is a responsible agency and has the following comments:

Transportation Planning

1. This project contains three site locations (Pump Station Project Location, Existing Pump Station (to be removed), and Intertie Location). For Table 4.17 A, please consider including locations for Vehicle Trip Generation and Passenger Car Equivalence Trip Generation.
2. The proposed project would require temporary lane and sidewalk closures, Caltrans recommends maximizing the safety for all road users including drivers, bicycles and pedestrians during the closures. Please refer to Caltrans Plans Preparation Manual, Chapter 2, Section 2.16 for instructions and recommendations. <https://dot.ca.gov/-/media/dot-media/programs/design/documents/cadd/ppm-text-ch2-sect2-16-ally.pdf>

Irvine Ranch Water District
March 18, 2021
Page 3

Permits:

- 3. Please coordinate with Caltrans in order to meet the requirements for any work within or near State Right-of-Way. A fee may apply. If the cost of work within the State right of way is below one Million Dollars, the Encroachment Permit process will be handled by our Permits Branch; otherwise the permit should be authorized through the Caltrans's Project Development Department. When applying for Encroachment Permit, please incorporate all Environmental Documentation, SWPPP/ WPCP, Hydraulic Calculations, R/W certification and all relevant design details including design exception approvals. For specific details for Encroachment Permits procedure, please refer to the Caltrans's Encroachment Permits Manual. The latest edition of the Manual is available on the web site:
<http://www.dot.ca.gov/hq/traffops/developserv/permits/>

6

Please continue to coordinate with Caltrans for any future developments that could potentially impact State transportation facilities. If you have any questions, please do not hesitate to contact Julie Lugaro at Julie.lugaro@dot.ca.gov.

7

Sincerely,

Scott Shelley
Branch Chief, Regional-IGR-Transit Planning
District 12

This page intentionally left blank

REGIONAL AGENCY: Caltrans District 12

LETTER CODE: S-1

COMMENTER: Scott Shelley, Branch Chief, Regional IGR Transit Planning

DATE: March 16, 2021

RESPONSE S-1-1

The comment provides introductory statements. This comment does not contain any substantive comments or questions about the Draft IS/MND or the analysis therein. No further response is necessary.

RESPONSE S-1-2

This comment provides a brief summary of the proposed Project. This comment does not contain any substantive comments or questions about the Draft IS/MND or the analysis therein. No further response is necessary.

RESPONSE S-1-3

This comment states that Caltrans is a Responsible Agency.

No Project construction activities would be conducted nearby or within State right-of-way. Further, the intertie location is more than 2,400 feet (ft) from State Route 241 (SR-241), which is outside Caltrans's right-of-way. Therefore, because no Project construction activities would be conducted nearby or within State right-of-way and no discretionary permits or approvals from Caltrans are required for the proposed Project, Caltrans would not be a Responsible Agency as defined by *State CEQA Guidelines* Section 15381. No further response is necessary.

RESPONSE S-1-4

This comment states that the proposed Project includes three site locations: the location for the proposed pump station, the location for the existing pump station (to be removed), and the location for the proposed intertie. The comment suggests revising Table 4.17.A to include locations for Vehicle Trip Generation and Passenger Car Equivalence Trip Generation.

Table 4.17.A has been revised to specify the locations for the construction phases. Per the revised Table 4.17.A, construction phases 1 through 5 would occur at the proposed pump station, and construction phase 6 would occur at both the location for the existing pump station (to be removed) and the location for the proposed intertie.

This change does not constitute a significant change to the information contained in the Draft IS/MND. This change merely clarifies information contained in the Draft IS/MND.

RESPONSE S-1-5

This comment states that the proposed Project would require temporary lane and sidewalk closures, and recommends maximizing the safety of all road users during closures. The comment also refers

the reader to Caltrans Plans Preparation Manual, Chapter 2, Section 2.16 for lane and sidewalk closure safety instructions and recommendations.

As described in Response 4.9(f) of the IS/MND, temporary lane and sidewalk closures would occur on Portola Parkway for construction of the proposed intertie. Portola Parkway is within the City of Lake Forest's right-of-way; therefore, Caltrans requirements for lane and sidewalk closures are not applicable to the proposed Project. However, as also specified in Response 4.9(f) of the IS/MND, the proposed Project would be implemented consistent with the recommendations of the current California Temporary Traffic Control Handbook (CATTCH) (previously known as the California Joint Utility Traffic Control Manual). The CATTCH provides basic standards for the safe movement of all road users (including emergency responders) through construction zones in accordance with Section 21400 of the California Vehicle Code and the California Manual on Uniform Traffic Control Devices. Mitigation Measure TRA-1 also requires that a Construction Traffic Management Plan (CTMP) is prepared based on the recommendations of the CATTCH. Consistency with the recommendations of the CATTCH would therefore maximize the safety of all road users during temporary lane and sidewalk closures on Portola Parkway.

RESPONSE S-1-6

This comment requests coordination with Caltrans to meet the requirements for work within or near State right-of-way.

No Project construction activities would be conducted nearby or within State right-of-way. As stated in the Draft IS/MND, temporary lane and sidewalk closures would occur within City of Lake Forest right-of-way on Portola Parkway for construction of the proposed intertie. In addition, the intertie location is more than 2,400 ft from SR-241, which is outside Caltrans's right-of-way. Therefore, an encroachment permit is not required to be obtained from Caltrans for the proposed Project. Instead, an encroachment permit would be obtained from the City of Lake Forest for temporary lane and sidewalk closures on Portola Parkway. This comment does not contain any substantive comments or questions about the Draft IS/MND or the analysis therein. No further response is necessary.

RESPONSE S-1-7

The comment provides conclusory statements. This comment does not contain any substantive comments or questions about the Draft IS/MND or the analysis therein. No further response is necessary.

1.0 PROJECT INFORMATION

1.1 PURPOSE OF THIS INITIAL STUDY

The purpose of this Initial Study/Mitigated Negative Declaration (IS/MND) is to: (1) describe the proposed Lake Forest Zone B to C Pump Station Project (proposed Project), which would occur in the City of Lake Forest; and (2) provide an evaluation of potential environmental effects associated with the Project's construction and operation.

This IS/MND has been prepared pursuant to the California Environmental Quality Act (CEQA), as amended (Public Resources Code [PRC] §21000 et seq.) and in accordance with the *State CEQA Guidelines* (California Code of Regulations [CCR] §15000 et seq.). Consistent with *State CEQA Guidelines* Section 15071, this IS/MND includes a description of the proposed Project, an evaluation of the potential environmental impacts associated with implementation of the proposed Project, and findings from the environmental analysis.

Pursuant to Section 15367 of the *State CEQA Guidelines*, Irvine Ranch Water District (IRWD) is the Lead Agency for the Project. The Lead Agency is the public agency that has the principal responsibility for carrying out or approving a project that may have a significant effect on the environment. IRWD, as the Lead Agency, has the authority for Project approval and adoption or certification of the accompanying environmental documentation.

1.2 SUMMARY OF FINDINGS

Based on the environmental checklist form prepared for the Project (Chapter 4.0), the proposed Project would have no impact or less than significant impacts in the following environmental areas: Aesthetics, Agriculture and Forest Resources, Air Quality, Energy, Greenhouse Gas Emissions, Hydrology and Water Quality, Land Use and Planning, Mineral Resources, Population and Housing, Public Services, Recreation, and Utilities and Service Systems. The proposed Project has the potential to have significant impacts on Biological Resources, Cultural Resources, Geology and Soils, Hazards and Hazardous Materials, Noise, Transportation, Tribal Cultural Resources, Wildfire, and Mandatory Findings of Significance unless the recommended mitigation measures described herein are incorporated into the Project.

According to the *State CEQA Guidelines*, it is appropriate to prepare a Mitigated Negative Declaration (MND) for the proposed Project because, after incorporation of the recommended mitigation measures, potentially significant environmental impacts would be eliminated or reduced to a level considered less than significant.

1.3 ORGANIZATION OF THIS INITIAL STUDY

This IS/MND is organized into chapters, as described below.

- **Chapter 1.0: Project Information.** This section provides an introduction and overview of the conclusions in this IS/MND.

- **Chapter 2.0: Project Description.** This chapter provides a brief description of the Project location, relevant background information, and a description of the existing conditions of the Project site and vicinity. This section also provides a description of the proposed Project and necessary discretionary approvals.
- **Chapter 3.0: Environmental Factors Potentially Affected.** This chapter provides a list of the environmental factors that would be potentially affected by this Project and a determination by IRWD as to the appropriate environmental document.
- **Chapter 4.0: Environmental Checklist and Evaluation of Environmental Impacts.** This chapter contains an analysis of environmental impacts identified in the environmental checklist and identifies mitigation measures that have been recommended to eliminate any potentially significant effects or to reduce them to a level considered less than significant.
- **Chapter 5.0: Mitigation Monitoring and Reporting Program.** Consistent with the requirements of PRC Section 21081.6, a mitigation monitoring and reporting program has been prepared for the proposed Project. The program describes the requirements and procedures to be followed by IRWD to ensure that all mitigation measures adopted as part of the proposed Project would be carried out as described in this IS/MND.
- **Chapter 6.0: List of Preparers.** This chapter identifies the personnel who were responsible for preparing the environmental document and technical studies.
- **Chapter 7.0: References.** This chapter identifies the references used to prepare this IS/MND.

1.4 CONTACT PERSON

Any questions or comments regarding the preparation of this IS/MND, its assumptions, or its conclusions should be referred to:

Irvine Ranch Water District
Water Resources & Environmental Compliance Department

2.0 PROJECT DESCRIPTION

2.1 PROJECT OVERVIEW

Irvine Ranch Water District (IRWD) proposes to construct a new pump station (proposed Project) located between 20381 Lake Forest Drive and 20411 Lake Forest Drive at the former Lake Forest Well No. 5 site in Lake Forest.

The purpose of the proposed Project is to improve the water quality within IRWD's Zone B to C recycled water system by constructing a new recycled water pump station. In addition to the construction of the new Zone B to C Recycled Water Pump Station, the Project would decommission the existing Zone B to C Pump Station, which is located adjacent to the existing IRWD Zone B East Reservoir. The proposed Project would also develop a new intertie between the Upper Oso Reservoir and the Lake Forest Zone C distribution system. The proposed intertie would provide the ability to isolate Upper Oso Reservoir from IRWD's recycled water distribution system.

2.2 PROJECT SITE LOCATION

The proposed Project site is located in Lake Forest in Orange County. As shown on Figure 2.1, Project Location, regional access to the proposed pump station, existing pump station (to be removed), and the proposed intertie is provided by State Route 241 (SR-241), located north of the proposed Project, and by Interstate 5 (I-5), located southwest of the proposed Project.

The proposed pump station building would be approximately 1,791 square feet (sf) and located on a 0.413-acre (ac) (17,990.28 sf) site (Assessor's Parcel No. 612-031-04) on Lake Forest Drive in Lake Forest, California. The Project site is bounded by 20411 Lake Forest Drive to the west, 20381 Lake Forest Drive to the east, Serrano Creek Trail to the north, and Lake Forest Drive to the south. Adjacent land uses include commercial use to the west, business park use to the east, regional park/open space to the north, and transportation corridor use to the south. As shown on Figure 2.2, Proposed Zone B to C Pump Station Site Plan, the new pump station would be located on a site previously occupied by IRWD Lake Forest Well No. 5.

2.3 PROJECT HISTORY AND EXISTING SITE CONDITIONS

2.3.1 Lake Forest Well No. 5

In 2001, IRWD acquired the Los Alisos Water District and its facilities, which included Lake Forest Well No. 5. IRWD utilized water from Lake Forest Well No. 5 to supplement its recycled water system. However, due to poor water production and high salinity, IRWD ceased the operation of Lake Forest Well No. 5. To make space for the new proposed Zone B to C recycled water pump station, Lake Forest Well No. 5 has been decommissioned. The decommissioning of Lake Forest Well No. 5 was exempt from the California Environmental Quality Act (CEQA), and a Notice of Exemption (NOE) pursuant to *State CEQA Guidelines* Section 15062 was filed on February 28, 2020. Therefore, decommissioning of Lake Forest Well No. 5 and removal of the equipment associated with the well are not addressed in this IS/MND. Although construction and operation of a new well is not a currently planned project, space is being allocated on the Project site to accommodate a potential new well, as shown on Figure 2.2.

- GENERAL NOTES:**
1. WORK SHALL COMPLY WITH THE FOLLOWING: THESE GENERAL NOTES (UNLESS OTHERWISE NOTED ON PLANS OR SPECIFICATIONS), UNIFORM BUILDING CODE, LATEST EDITION.
ALL APPLICABLE LOCAL AND STATE CODES, ORDINANCES AND REGULATIONS.
ON SITE VERIFICATION OF ALL DIMENSIONS AND CONDITIONS SHALL BE THE RESPONSIBILITY OF THE SUB. NOTED DIMENSIONS SHALL TAKE PRECEDENCE OVER SCALE.
 2. APPROVAL BY THE INSPECTOR DOES NOT MEAN APPROVAL OF FAILURE TO COMPLY WITH THE PLANS AND SPECIFICATIONS.
 3. ANY DESIGN WHICH FAILS TO BE CLEAR OR IS AMBIGUOUS MUST BE REFERRED TO THE DESIGNER OR THE ENGINEER FOR INTERPRETATION OR CLARIFICATION.
 4. TEMPORARY TOILET SHALL BE INSTALLED BEFORE JOB IS STARTED AS REQUIRED BY CODE.

5. CONSTRUCT BARRICADES, ETC., WHEN REQUIRED
6. CONTRACTOR SHALL CONSULT ALL REPRESENTATIVES OF CITY, GAS, LIGHT, WATER, POWER, AND PHONE COMPANIES, CONCERNING AVAILABLE FACILITIES BEFORE STARTING WORK OR CONNECTING FACILITIES.
7. ALL WORK SHALL CONFORM TO LOCAL CODES, STATE AND FEDERAL LAWS. CONTRACTOR SHALL VERIFY ALL WORK AND DIMENSIONS ON DRAWING AND REPORT ANY DISCREPANCIES TO THE DESIGNER OR ENGINEER BEFORE COMMENCING WORK.
8. SUBCONTRACTOR SHALL AT ALL TIMES KEEP WORKMAN'S COMPENSATION INSURANCE IN FULL FORCE AND EFFECT.
9. THE SUBCONTRACTOR SHALL ALSO KEEP A COMPLETE RECORD OF SOCIAL SECURITY TAX PAYMENTS MADE, AND SUBMIT TO THE CONTRACTOR FULL EVIDENCE THAT SUCH PAYMENTS HAVE BEEN MADE AS REQUIRED.
10. THE IMPROVEMENTS SHALL BE INSURED AGAINST LOSS BY FIRE DURING THE PROGRESS OF THE WORK BY THE

- OWNER ALL MATERIALS SHALL BE OF THE BEST OF THEIR RESPECTIVE KINDS.
11. ALL LABOR AND INSTALLATION SHALL BE PERFORMED IN THE BEST POSSIBLE MANNER BY SKILLED WORKERS.
 12. CONTRACTOR SHALL BE RESPONSIBLE FOR THE CORRECTNESS OF THE WORK. EACH SUBCONTRACTOR IS RESPONSIBLE FOR HIS OWN WORK UNTIL SAME HAS BEEN COMPLETED AND ACCEPTED AND ALSO FOR HIS OWN MATERIALS.
 13. SUBCONTRACTORS SHALL KEEP THE PREMISES CLEAN OF RUBBISH CAUSED BY THEIR WORK.

Lake Forest Zone B to C Pump Station Project
Proposed Zone B to C Pump Station Site Plan

This page intentionally left blank

2.3.2 Existing Lake Forest Zone B to C Pump Station

The existing Lake Forest Zone B to C Pump Station was originally designed in 1998 and subsequently constructed adjacent to the existing IRWD Zone B East Reservoir, located between Vista Terrace and Regency Lane in Lake Forest. The existing pump station consists of two horizontal split-case pumps, suction piping, a discharge header, a pressure relief valve, miscellaneous valves, fittings, the motor control center, and a remote terminal unit cabinet. The existing pump station is an open-air, 30-foot (ft) by 19 ft concrete area surrounded by a retaining wall on three sides and enclosed by a fence in the front. The existing pump station has exceeded its useful service life and is not a standard fully enclosed IRWD pump station. The proposed Project would replace the existing pump station, as described in Section 2.4, Proposed Facilities. The existing pump station's remote terminal unit (RTU) cabinet contains equipment, signals, and logic that are critical to the operation of the Zone B East Reservoir. Additionally, the Zone B East Reservoir's Mini-Power Center is fed from the existing pump station's motor control center (MCC). This electrical and instrumentation equipment requires modification and relocation during the demolition of the existing Lake Forest Zone B to C Pump Station to keep the Zone B East Reservoir operational.

2.4 PROPOSED FACILITIES

2.4.1 New Lake Forest Zone B to C Pump Station

The proposed Lake Forest Zone B to C Pump Station would be located on the site where Lake Forest Well No. 5 was previously located and would be designed to supply IRWD Zone B recycled water to IRWD's Zone C system as a closed-loop system. The proposed pump station would have a maximum capacity of 2,250 gallons per minute (gpm) at 124 ft of total dynamic head. The proposed pump station would include variable speed pumps with a pumping range from essentially 0 gpm to the full flow of 2,250 gpm, a magnetic flow meter, a pressure relief valve, an MCC, variable frequency drives, instrumentation and controls, a standby emergency generator, and related equipment. The proposed pumping facilities would be operated on a minimum pressure requirement of 120 pounds per square inch (psi) at the pump station discharge and would engage parallel pumps in series to meet system flow demands.

2.4.2 Demolition of Existing Lake Forest Zone B to C Pump Station

The demolition of the existing Lake Forest Zone B to C Pump Station would occur after the construction of the proposed new pump station. The items to be demolished include the majority of the exposed piping, valves, fittings, gauges, sensors, pumps, and pipe stands. The pump bases and any other raised concrete surfaces would be left in place. The Zone B suction piping from the existing Zone B East Reservoir would be cut back and equipped with a flush-out. The Zone C discharge piping would be cut back and equipped with a blind flange and air and vacuum relief valve. The MCC and RTU cabinets would be protected in place until the relocation of the equipment critical to the Zone B East Reservoir has been completed. The existing retaining wall and fence would be protected in place.

2.4.3 Santa Margarita Water District Intertie

Currently, IRWD's Zone C recycled water system is floated on the Santa Margarita Water District's (SMWD) Upper Oso Reservoir to maintain operational pressure. After the construction of the

proposed new pump station, Zone C would typically be isolated from the Upper Oso Reservoir and operate as a closed-loop system. IRWD would maintain an operational connection with the Upper Oso Reservoir and construct a new proposed meter located along Portola Parkway, between El Toro Road and Saddleback Parkway. Construction of the proposed intertie would occur within the third and fourth southbound lanes of travel along Portola Parkway. The proposed intertie would be closed during normal operations but is available to augment recycled water supplies into the IRWD Lake Forest Zone C system during maintenance operations of the IRWD system or a request from SMWD for IRWD to provide recycled water flows into the Upper Oso Reservoir. The proposed intertie would also be used by IRWD to deliver excess recycled water flow to SMWD during low-demand periods.

2.5 UTILITIES

2.5.1 Electrical, Instrumentation, and Controls

The existing Zone B to C Pump Station is fed by a 480-volt, Southern California Edison (SCE) padmount transformer at the Zone B East Reservoir. The existing pump station metering switchboard is also located at the Zone B East Reservoir. To maintain power to the Zone B East Reservoir, prior to demolition of the existing pump station, a fused switch would be added to the side of the existing 480-volt metering switchboard. The fused switch would repower the reservoir site panel board (mini-power center). In addition, the reservoir signals are wired to the pump station programmable logic controller (PLC) enclosure (the RTU). The pump station RTU would be relocated to the Zone B East Reservoir, and the reservoir signals would be routed to the new RTU location. A new radio antenna would be added adjacent to the relocated RTU. The design of the pump station and intertie facilities would be coordinated with SCE.

2.5.2 Yard Piping

To avoid construction conflicts and provide the necessary separation between the recycled water, sanitary sewer, and future potable water pipelines from a new groundwater well, both the suction and discharge piping for the proposed new pump station would be constructed along the southern perimeter of the site. Pipelines, under construction within the public right-of-way (under a separate contract), would connect to the new suction and discharge pipelines within the site. The new pump station's recycled water suction and discharge pipelines would be approximately 12- to 16-inch-diameter steel with a pressure rating of 150 psi. Aboveground suction and discharge piping within the new pump station shall be stainless steel and cement mortar lined and painted and below ground suction, and discharge piping would be cement mortar lined and coated.

The existing 6-inch-diameter domestic water pipeline would be redirected around the dedicated space for the possible future well and reduced to a 3-inch service to provide domestic water for various uses within the new pump station.

A new proposed 10-inch-diameter sanitary sewer line would be installed from the west side of the property and connected to a 10-inch-diameter sewer line (being constructed under a separate contract). Two lateral connections would also be provided for the new pump station drains and surge tank sump pump with a clean-out at the pipe termination. All pipelines currently under construction within the public right-of-way under a separate contract are exempt from CEQA, and

an NOE pursuant to *State CEQA Guidelines* Section 15602 was filed on December 11, 2019. Therefore, installation of the pipeline is not addressed in this IS/MND.

2.6 OPERATION

Generally, operation of the proposed Project would be conducted remotely, and there would not be any full-time dedicated staff at the new pump station site. However, it is likely that staff would visit the site for routine maintenance or in the event of an emergency. It is anticipated that any visit by staff would last for no more than approximately 2 hours, depending on the maintenance. In the event of larger maintenance activities or emergencies, the need for additional staff after normal business hours may be required.

2.7 SITE SECURITY AND ACCESS

2.7.1 Site Exterior (Security) Lighting

Exterior pole-mounted or building-mounted fixtures with light skirts would be installed on the new pump station. The site lighting fixtures would be a cutoff design to keep illumination within the property and prevent light from spilling over onto the neighboring properties or interfering with drivers on Lake Forest Drive.

2.7.2 Site Access

Site access would not be changed as part of the proposed Project. In the existing condition, access to the new pump station is provided via Lake Forest Drive. Site access for the existing pump station is controlled by a gate located on the access road near its intersection with Regency Lane, and site access for the SMWD intertie is provided via Portola Parkway.

2.8 PROJECT IMPLEMENTATION

Pending weather conditions, Project construction is anticipated to take approximately 12 months, beginning in May 2021, and would include the following construction phases:

- **Phase 1: Earthwork** (8 workers for 4 weeks)
- **Phase 2: Steel Pipe and Yard Piping** (8 workers for 3 weeks)
- **Phase 3: Concrete** (12 workers for 7 weeks)
- **Phase 4: Installation of Concrete Masonry Units (CMU)** (8 workers for 8 weeks)
- **Phase 5: Installation of Steel Girders and Construction CMU Pump Station Building** (8 workers for 20 weeks)
- **Phase 6: Intertie Construction and Demolition of the Existing Pump Station** (4 to 6 workers for 6 weeks)

The construction trips that would be generated on a daily basis throughout each phase of construction would be based on the number of construction workers and delivery of construction materials. The overlap of Phase 5 (Installation of Steel Girders and Construction CMU Pump Station

Building) and Phase 6 (Intertie Construction and Demolition of the Existing Pump Station) would have the highest construction trip generation.

2.9 DISCRETIONARY ACTIONS

This initial Study/Mitigated Negative Declaration (IS/MND) is intended to serve as the primary CEQA environmental document for all actions associated with the proposed Project, including all discretionary approval requested or required of IRWD to implement the proposed Project. In addition, this is the primary reference document for the formulation and implementation of a Mitigation Monitoring and Reporting Program for the proposed Project (Chapter 5.0 of this IS/MND).

2.9.1 Probable Future Actions by Responsible Agencies

The proposed Project may require approvals, permits, or authorization from other agencies, classified as “Responsible Agencies” under CEQA. According to Section 15381 of the *State CEQA Guidelines*, a Responsible Agency is defined as a public agency other than the Lead Agency that would have discretionary approval power over the proposed Project or some component of the Project, including mitigation. These agencies include, but are not limited to, the agencies identified in Table 2.A. It should be noted that while a water district is exempt from compliance with building ordinances of the county or city in which it is located, the proposed Project would be designed to meet the appropriate city codes and standards, as well as the current California Building Code (CBC).

Table 2.A: Probable Future Actions by Responsible Agencies

Agency	Action
Local	
City of Lake Forest	<ul style="list-style-type: none"> • Encroachment Permit • Plan approval for facilities being constructed in the City’s right-of-way on Portola Parkway for the proposed intertie

2.9.2 Other Ministerial Actions

If necessary, ministerial permits/approvals may be issued by the City or Lake Forest or another appropriate agency to allow site preparations, curb cuts (if necessary), connections to the utility infrastructure, and other Project features subject to ministerial permits.

3.0 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this Project, involving at least one impact that is "Less than Significant with Mitigation Incorporated" as indicated by the checklists on the following pages.

- | | | |
|----------------------------------------------------------|-------------------------------------------------------------|------------------------------------------------------------------------|
| <input type="checkbox"/> Aesthetics | <input type="checkbox"/> Agriculture and Forestry Resources | <input type="checkbox"/> Air Quality |
| <input checked="" type="checkbox"/> Biological Resources | <input checked="" type="checkbox"/> Cultural Resources | <input type="checkbox"/> Energy |
| <input checked="" type="checkbox"/> Geology & Soils | <input type="checkbox"/> Greenhouse Gas Emissions | <input checked="" type="checkbox"/> Hazards & Hazardous Materials |
| <input type="checkbox"/> Hydrology/Water Quality | <input type="checkbox"/> Land Use & Planning | <input type="checkbox"/> Mineral Resources |
| <input checked="" type="checkbox"/> Noise | <input type="checkbox"/> Population & Housing | <input type="checkbox"/> Public Services |
| <input type="checkbox"/> Recreation | <input checked="" type="checkbox"/> Transportation | <input checked="" type="checkbox"/> Tribal Cultural Resources |
| <input type="checkbox"/> Utilities/Service Systems | <input checked="" type="checkbox"/> Wildfire | <input checked="" type="checkbox"/> Mandatory Findings of Significance |

DETERMINATION. On the basis of this initial evaluation:

1. I find that the Project **could not** have a significant effect on the environment, and a **NEGATIVE DECLARATION** will be prepared.
2. I find that although the proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the Project have been made by or agreed to by the Project proponent. A **MITIGATED NEGATIVE DECLARATION** will be prepared.
3. I find the proposed Project **may have a significant effect** on the environment, and an **ENVIRONMENTAL IMPACT REPORT** is required.
4. I find that the proposed Project **may have a "potentially significant impact" or "potentially significant unless mitigated impact"** on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An **ENVIRONMENTAL IMPACT REPORT** is required, but it must analyze only the effects that remain to be addressed.
5. I find that although the proposed Project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or Negative Declaration pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or Negative Declaration, including revisions or mitigation measures that are imposed upon the proposed Project, nothing further is required.

IRWD Representative

Date

This page intentionally left blank

4.0 ENVIRONMENTAL CHECKLIST AND EVALUATION OF ENVIRONMENTAL IMPACTS

1. A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a Lead Agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to Projects like the one involved (e.g., the Project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on Project-specific factors as well as general standards (e.g., the Project will not expose sensitive receptors to pollutants, based on a Project-specific screening analysis).
2. All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as Project-level, indirect as well as direct, and construction as well as operational impacts.
3. Once the Lead Agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect may be significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an Environmental Impact Report (EIR) is required.
4. “Negative Declaration: Less Than Significant with Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less Than Significant Impact”. The Lead Agency must describe the mitigation measures and briefly explain how they reduce the effect to a less than significant level (mitigation measures from earlier analyses may be cross referenced, as discussed below).
5. Earlier analyses may be used where, pursuant to the tiering, Program EIR, or other California Environmental Quality Act (CEQA) process, an effect has been adequately analyzed in an earlier EIR or Negative Declaration (Section 15063 (c)(3)(D)). In this case, a brief discussion should identify the following:
 - a. **Earlier Analysis Used:** Identify and state where they are available for review.
 - b. **Impacts Adequately Addressed:** Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c. **Mitigation Measures:** For effects that are “Less Than Significant with Mitigation Measures Incorporated,” describe the mitigation measures that were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the Project.

6. Lead Agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
7. Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.
8. This is only a suggested form, and Lead Agencies are free to use different formats; however, Lead Agencies should normally address the questions from this checklist that are relevant to a Project's environmental effects in whatever format is selected.
9. The explanation of each issue should identify:
 - a. The significance criteria or threshold, if any, used to evaluate each question; and
 - b. The mitigation measure identified, if any, to reduce the impact to less than significant.

4.1 AESTHETICS

<i>Except as provided in Public Resources Code Section 21099, would the project:</i>		Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b)	Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c)	In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d)	Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

4.1.1 Impact Analysis

a) *Except as provided in Public Resources Code (PRC) Section 21099, would the Project have a substantial adverse effect on a scenic vista?*

California State Government Code Section 65560(b)(3) stipulates that city and county General Plans address "...Open space for outdoor recreation, including but not limited to, areas of outstanding scenic, historical and cultural value; areas particularly suited for park and recreation purposes, including access to lakeshores, beaches, and rivers and streams; and areas that serve as links between major recreation and open-space reservations, including utility easements, banks of rivers and streams, trails, and scenic highway corridors..."

A scenic vista is generally defined as a viewpoint that provides expansive views of a highly valued landscape for the benefit of the general public. There are no designated scenic vistas within Lake Forest; however, according to the City of Lake Forest's (City's) Final Environmental Impact Report (EIR) for the 2040 Lake Forest General Plan,¹ the City identifies Serrano Creek as a significant visual resource.

The existing Project site is vacant and filled with dirt and gravel. The Project site is bounded by 20411 Lake Forest Drive to the west, 20381 Lake Forest Drive to the east, Serrano Creek Trail to the north, and Lake Forest Drive to the south. Respective adjacent land uses include commercial use to the west, business park use to the east, regional park/open space to the north, and transportation corridor use to the south.

¹ City of Lake Forest. 2020. Final Environmental Impact Report for the 2040 Lake Forest General Plan. April.

Project improvements for the proposed pump station would be confined to the 0.413-acre (ac) property owned by Irvine Ranch Water District (IRWD), and would not extend into the Serrano Creek Trail. Because Lake Forest Well No. 5 was previously decommissioned and removed from the Project site under a separate Notice of Exemption (NOE), no buildings or structures are currently located on the Project site. The proposed pump station building would be approximately 19 feet (ft) 10 inches at its highest point, which is well below the maximum allowable height of 35 ft within the General Business (C2) District. A retaining wall will be constructed around the perimeter of the Project site that will be a maximum of 6 ft in height.

Due to the relatively low heights of the proposed building and retaining wall, the proposed Project would not substantially reduce views to the north from Lake Forest Drive. In addition, it would not substantially reduce or impair views of the Serrano Creek Trail to the north because a group of trees bordering the northern perimeter of the Project site blocks views of the Serrano Creek Trail in the existing condition. Similarly, the proposed Project would not substantially reduce or impair views of mountains to the northeast that are not already being impaired by the surrounding commercial development, and views of the mountains would remain visible from Lake Forest Drive.

Project improvements for the removal for the existing pump station located between Vista Terrace and Regency Lane would not substantially reduce or impair views of surrounding mountains. While the existing fencing around the pump station would remain after demolition, no new structures or buildings would be constructed. Project improvements for the proposed intertie located along Portola Parkway between El Toro Road and Saddleback Parkway would occur underground and therefore would not reduce or impair views. Above-grade utility cabinets for remote radio communication and control and for SCE metering will be located behind and adjacent to the sidewalk on Portola Parkway within a parkway area, and will be typical of other utility cabinets along the street. In addition, small air-exchange vents will be located within the same area, adjacent to the utility cabinets, which are typical for ventilating underground vaults.

No other potentially scenic resources are located within the vicinity of the locations for the removal of the existing pump station or proposed intertie. Therefore, because there are no designated scenic vistas within Lake Forest and because the proposed Project would not substantially impair views of Serrano Creek or mountains to the northeast, the proposed Project would have a less than significant impact to scenic vistas, and no mitigation would be required.

Significance Determination: Less Than Significant Impact.

Mitigation Measures: No mitigation is required.

b) Except as provided in PRC Section 21099, would the Project substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State Scenic Highway?

The California Department of Transportation (Caltrans) Landscape Architecture Program administers the Scenic Highway Program contained in the Streets and Highways Code, Sections 260–263. State Highways are classified as either Officially Listed or Eligible. The City of Lake Forest does not contain any State-designated scenic highways within its jurisdictional limits, as designated by Caltrans under

the California Scenic Highway Program.¹ The nearest State highway that is eligible for official designation as a State Scenic Highway is State Route 74 (SR-74), which is located approximately 9.5 miles (mi) southeast of the Project site and is not visible from the Project site. Therefore, the proposed Project would have no impact related to scenic resources within a State Scenic Highway corridor. No mitigation is required.

Significance Determination: No Impact.

Mitigation Measures: No mitigation is required.

c) Except as provided in PRC Section 21099, would the project, in non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point.) If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

The proposed pump station and location of the proposed intertie are within urbanized areas. Adjacent land uses to the proposed pump station include commercial use to the west, business park use to the east, regional park/open space to the north, and transportation corridor use to the south. Adjacent land uses to the proposed intertie include commercial use to the north and west, regional park/open space to the south, and transportation corridor use to the east. Lake Forest Drive provides access to the proposed pump station, and site access for the proposed intertie is provided via Portola Parkway. The existing pump station (to be removed) is located adjacent to the existing IRWD Zone B East Reservoir and is surrounded by vacant land designated as regional park/open space to the west and east, and community park/open space to the south. Site access for the existing pump station (to be removed) is controlled by a gate located on the existing access road near its intersection with Regency Lane. As discussed below, the proposed Project would not conflict with applicable zoning or General Plan regulations governing scenic quality.

Construction. Construction of the proposed pump station and proposed intertie would involve on-site construction activities that would be visible to customers or employees of respective adjacent commercial uses and would be visible to travelers along Lake Forest Drive and Portola Parkway, respectively. Construction activities for the existing pump station (to be removed) would be obstructed by adjacent slopes, vegetation, and trees, and would not substantially degrade the existing visual character or quality of public views as viewed from Regency Lane. Furthermore, construction activities for the proposed Project would be short term. In addition, all construction vehicles for the proposed pump station would be staged on site for the duration of the construction period. Visual impacts during construction would be temporary in nature and would cease upon Project completion. Therefore, construction impacts would be less than significant, and no mitigation is required.

Operation. The proposed pump station would be consistent with the visual quality and character of the surrounding area. Since the majority of the improvements for the proposed intertie would be

¹ California Department of Transportation. 2019. California State Scenic Highway System Map. Website: <https://www.arcgis.com/apps/webappviewer/index.html?id=2e921695c43643b1aaf7000dfcc19983> (accessed December 9, 2020).

located underground, and the above-grade utility cabinets and vents are commonly found along streets, the proposed intertie would not degrade public views. Therefore, the proposed Project would not conflict with applicable zoning and other regulations governing scenic quality and there would be no impact. No mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

d) Except as provided in PRC Section 21099, would the project create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

The impact of nighttime lighting depends upon the type of use affected, the proximity to the affected use, the intensity of specific lighting, and the background or ambient level of the combined nighttime lighting. Nighttime ambient light levels may vary considerably depending on the age, condition, and abundance of point-of-light sources present in a particular view. The use of exterior lighting for security and aesthetic illumination of architectural features may contribute to ambient nighttime lighting conditions.

Nighttime illumination impacts are evaluated in terms of the Project's net change in ambient lighting conditions and proximity to light-sensitive land uses. The site for the proposed pump station is currently vacant. Existing sources of light on or adjacent to the proposed pump station site include security and exterior lighting from adjacent properties, streetlights, and vehicle headlights. Sensitive uses in the vicinity of the proposed pump station site include the Serrano Creek Trail.

Construction of the proposed Project would be limited to daytime hours, generally from 7:00 a.m. to 8:00 p.m., in accordance with City of Lake Forest policies.¹ Any construction-related illumination during evening and nighttime hours would be shielded to the extent feasible, would consist of the minimum lighting required for safety and security purposes only, and would occur only for the duration required for the temporary construction process. Due to its limited scope and short duration, light resulting from construction activities would not substantially impact sensitive uses, substantially alter the character of off-site areas surrounding the construction area, or interfere with the performance of an off-site activity. Therefore, construction of the proposed Project would not create a new source of substantial light or glare that would adversely affect day or nighttime views in the area, and light impacts associated with construction would be less than significant. No mitigation would be required.

The proposed pump station would include the installation of pole-mounted or building-mounted fixtures with light skirts that would be a cutoff design to keep illumination within the site and prevent light from spilling over onto the neighboring properties or interfering with drivers on Lake Forest Drive. The proposed pump station would also include interior lighting that would consist of surface-mounted light-emitting diode (LED) fixtures. The proposed Project would comply with the City's lighting policies, which generally require that light be directed away from adjoining properties and public rights-of-way and that lighting comply with security lighting regulations.

¹ City of Lake Forest. 2019. Lake Forest Municipal Code, Section 11.16.060(H).

Exterior building materials and façades would not be constructed with highly reflective materials (e.g., windows or glass with mirror-like tints), thereby eliminating any glare associated with the proposed pump station. Additionally, the proposed Project does not include a formal parking lot where glare from the sunlight's reflection off vehicle windshields could be prevalent. The proposed pump station building would be shielded by the 6 ft wall.

Therefore, lighting provided as part of the proposed Project would be fairly minimal and would be largely consistent with the type and intensity of existing lighting in the Project vicinity. The final lighting for the proposed Project would be subject to review and approval by IRWD as part of the site plan review process to ensure compliance with the City's Municipal Code and to ensure that the lighting is sufficient for safety purposes. As such, the proposed Project would not create a new source of substantial light or glare that would adversely affect day or nighttime views in the area. No mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

4.2 AGRICULTURE AND FORESTRY RESOURCES

In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state’s inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Result in the loss of forest land or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

4.2.1 Impact Analysis

a) Would the Project convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

The California Natural Resources Agency Farmland Mapping and Monitoring Program (FMMP) produces maps and statistical data used for analyzing impacts on California’s agricultural resources. Agricultural land is rated according to soil quality and irrigation status, with the best quality land being Prime Farmland. The maps are updated every 2 years with the use of a computer mapping system, aerial imagery, public review, and field reconnaissance; however, the most current available Farmlands Map for Orange County is dated 2014–2016.

According to the 2014–2016 FMMP, the proposed Project site (including the locations for the removal of the existing pump station and proposed intertie) is in an area classified as Urban and

Built-Up Land, and is not designated as farmland.¹ Additionally, no agricultural uses exist on the site, and the Project site is generally surrounded by urban development. Because the Project site is not designated as farmland pursuant to the FMMP, the proposed Project would not result in the conversion of farmland to a non-agricultural use. No mitigation is required.

Significance Determination: No Impact
Mitigation Measures: No mitigation is required.

b) Would the Project conflict with existing zoning for agricultural use, or a Williamson Act contract?

The proposed pump station site is zoned within the General Business (C2) District. The existing pump station (to be removed) is zoned as Open Space, and the proposed intertie is zoned within the Community Commercial (CC) District. Therefore, the proposed Project would not conflict with existing zoning for agricultural use. The Project site is also not under a Williamson Act Contract.² Consequently, no impact would occur given that the proposed Project would not conflict with existing zoning for agricultural use and is not under a Williamson Act Contract.

Significance Determination: No Impact
Mitigation Measures: No mitigation is required.

c) Would the Project conflict with existing zoning for, or cause rezoning of, forest land (as defined in PRC section 12220(g)), timberland (as defined by PRC section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?

The proposed pump station site is zoned within the General Business (C2) District. The existing pump station (to be removed) is zoned as Open Space, and the proposed intertie is zoned within the Community Commercial (CC) District. The Project site is not used for timberland production, is not zoned as forest land or timberland, and does not contain forest land or timberland. Therefore, no impacts to forest land or timberland would occur, and no mitigation is required.

Significance Determination: No Impact
Mitigation Measures: No mitigation is required.

d) Would the Project result in the loss of forest land or conversion of forest land to non-forest use?

The Project site was previously graded, and the proposed Project would not convert forest land to a non-forest use. Likewise, the Project site would not contribute to environmental changes that could result in conversion of forest to non-forest use. Therefore, no impacts to forest land would occur, and no mitigation is required.

Significance Determination: No Impact
Mitigation Measures: No mitigation is required.

¹ California Department of Conservation (DOC). 2018. California Important Farmland Finder. Website: <https://maps.conservation.ca.gov/DLRP/CIFF/> (accessed December 9, 2020).

² Natural Resources Agency. 2014. Department of Conservation, Division of Land Resource Protection, California Williamson Act Contract Land Map.

e) Would the Project involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?

The Project site is not located in the vicinity of any existing agricultural land or forest land or land zoned for an agricultural use. The proposed Project would not contribute to environmental changes that could result in conversion of farmland to non-agricultural use or forest land to a non-forest use. Therefore, no impacts to farmland or forest land would occur, and no mitigation is required.

Significance Determination: No Impact

Mitigation Measures: No mitigation is required.

4.3 AIR QUALITY

Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

4.3.1 Impact Analysis

The proposed Project site is located in Lake Forest, California, which is part of the South Coast Air Basin (Basin) and is managed by the South Coast Air Quality Management District (SCAQMD), which is the agency principally responsible for comprehensive air pollution control in the Basin. The Basin includes Orange County and the non-desert regions of Los Angeles, Riverside, and San Bernardino Counties.

Both the United States Environmental Protection Agency (EPA) and the California Air Resources Board (CARB) have established health-based ambient air quality standards (AAQS) for common air pollutants: carbon monoxide (CO), ozone (O₃), nitrogen dioxide (NO₂), sulfur dioxide (SO₂), lead (Pb), and suspended particulate matter (PM). These standards are designed to protect the health and welfare of the populace with a regional margin of safety. These AAQS are levels of contaminants that represent safe levels that avoid specific adverse health effects associated with each criteria pollutant. The Basin is in nonattainment for the federal and State standards for O₃ and particulate matter less than 2.5 microns in diameter (PM_{2.5}). In addition, the Basin is in nonattainment for the State particulate matter less than 10 microns in diameter (PM₁₀) standards and in attainment/maintenance for the federal PM₁₀, as well as federal and State attainment for Pb, SO₂, CO, and NO₂ standards.

To meet these standards, SCAQMD has established project-level thresholds for volatile organic compounds (VOCs), nitrogen oxides (NO_x), and PM_{2.5}.

VOCs are formed from the combustion of fuels and evaporation of organic solvents. VOCs are an O₃ precursor and a prime component of the photochemical reaction that forms O₃. NO_x refers to the compounds of NO₂, a reddish-brown gas, and nitric oxide (NO), a colorless, odorless gas that is formed from fuel combustion under high temperature or pressure. NO_x is a primary component of the photochemical smog reaction. NO_x also contributes to other pollution problems, including a high concentration of fine particulate matter, poor visibility, and acid deposition.

The proposed Project would generate temporary air emissions during Project construction. Specific criteria for determining whether the potential air quality impacts of a project are significant are set forth in the SCAQMD *CEQA Air Quality Handbook*.¹ The daily thresholds for construction emissions established by the SCAQMD, and which are used in the analysis of air quality impacts for the proposed Project, are presented in Table 4.3.A.

Table 4.3.A: SCAQMD Construction and Operation Thresholds of Significance (lbs/day)

	VOC	NO _x	CO	SO ₂	PM ₁₀	PM _{2.5}
Construction Thresholds	75	100	550	150	150	55
Operation Thresholds	55	55	550	150	150	55

Source: *CEQA Air Quality Handbook* (SCAQMD 1993).

CO = carbon monoxide

lbs/day = pounds per day

NO_x = nitrogen oxides

PM₁₀ = particulate matter less than 10 microns in size

PM_{2.5} = particulate matter less than 2.5 microns in size

SCAQMD = South Coast Air Quality Management District

SO₂ = sulfur dioxide

VOC = volatile organic compounds

Projects in the Basin with construction-related emissions that exceed any of the emission thresholds in Table 4.3.A are considered potentially significant by the SCAQMD.

In addition, the SCAQMD published its *Final Localized Significance Threshold Methodology* in July 2008b, recommending that all air quality analyses include an assessment of air quality impacts to nearby sensitive receptors.² This guidance was used to analyze potential localized air quality impacts associated with construction of the proposed Project. Localized significance thresholds (LSTs) are developed based on the size or total area of the emission source, the ambient air quality in the Source Receptor Area (SRA), and the distance to the Project. The SCAQMD defines structures that house persons (e.g., children, the elderly, persons with pre-existing respiratory or cardiovascular illness, and athletes and others who engage in frequent exercise) or places where they gather as sensitive receptors (i.e., residences, schools, playgrounds, child-care centers, convalescent centers, retirement homes, and athletic fields).

LSTs are based on the ambient concentrations of that pollutant within the Project’s SRA and the distance to the nearest sensitive receptor. For the proposed Project, the appropriate SRA for the LST is the Saddleback Valley area (SRA 19). The SCAQMD provides LST screening tables for 25-, 50-, 100-, 200-, and 500-meter source-receptor distances.

a) Would the Project conflict with or obstruct implementation of the applicable air quality plan?

An Air Quality Management Plan (AQMP) describes air pollution control strategies to be taken by the SCAQMD to meet air quality standards. On March 3, 2017, the SCAQMD adopted the 2016 AQMP, which is a regional and multi-agency effort (i.e., SCAQMD, CARB, Southern California

¹ South Coast Air Quality Management District (SCAQMD). 1993. *CEQA Air Quality Handbook*. April.

² South Coast Air Quality Management District (SCAQMD). 2008b. *Final Localized Significance Threshold Methodology*. July.

Association of Governments [SCAG], and the EPA). The main purpose of an AQMP is to bring an area into compliance with the requirements of federal and State air quality standards. CEQA requires that certain proposed projects be analyzed for consistency with an AQMP. The two principal criteria for conformance to an AQMP are:

1. Whether the project would result in an increase in the frequency or severity of existing air quality violations; cause or contribute to new violations; or delay timely attainment of air quality standards; and
2. Whether the project would exceed the assumptions in the AQMP.

For a project to be consistent with the SCAQMD AQMP, the pollutants emitted from the proposed Project should not exceed the SCAQMD daily emission threshold or cause a significant impact on air quality. As shown in Sections 4.3(b) through 4.3(d) below, the proposed Project would not generate emissions that exceed SCAQMD thresholds. Therefore, regarding the first criterion for conformance to an AQMP, the proposed Project would not (1) generate short-term or long-term emissions of VOCs, NO_x, PM_{2.5}, or PM₁₀ that could potentially cause an increase in the frequency or severity of existing air quality violations; (2) cause or contribute to new violations; or (3) delay timely attainment of air quality standards.

With respect to the second criterion, the proposed Project would not increase or modify the City's population, housing, or employment projections. The proposed Project would provide the water infrastructure needed to serve the current and future demand for water. Therefore, the proposed Project would not conflict with the SCAQMD AQMP and would not conflict with or obstruct implementation of the SCAQMD AQMP. No mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

b) Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard?

CEQA defines a cumulative impact as two or more individual effects that, when combined, are considerable or that compound or increase other environmental impacts. The construction and operational emissions associated with the proposed Project are analyzed below. If the combined construction and operational criteria pollutant emissions are less than the SCAQMD thresholds, there would not be a cumulatively considerable net increase. The proposed Project would not generate operation- or construction-period emissions in excess of established standards, as described below. Therefore, the proposed Project would not result in a cumulative considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or State AAQS.

Short-Term Construction Emissions. During construction, short-term degradation of air quality may occur due to the release of particulate matter emissions (i.e., fugitive dust) generated by excavating, paving, and building activities. Emissions from construction equipment are also anticipated and

would include CO, NO_x, VOCs, directly-emitted particulate matter (PM_{2.5} and PM₁₀), and toxic air contaminants (TACs) such as diesel exhaust particulate matter.

Construction would involve demolition, site preparation, grading, trenching, building construction, paving, and architectural coatings (painting). The proposed Project would include an additional demolition phase at the end of project construction to represent the removal of the decommissioned pump station located adjacent to the IRWD Zone B East Reservoir. As previously mentioned in the Project Description, the demolition of the existing Lake Forest Zone B to C Pump Station would occur after the construction of the new pump station. The Zone B piping from the existing Zone B East Reservoir would be cut back and equipped with a flushout. The Zone C discharge piping would be cut back and equipped with a blind flange and air and vacuum relief valve. The trenching phase assumes the short-term excavation and construction of a subterranean enclosure at the proposed intertie location.

Construction-related effects on air quality would be greatest during the grading phase, due to the disturbance of soils. If not properly controlled, these activities would temporarily generate particulate emissions. A source of fugitive dust would come from the disturbance of soil during excavation or handling. Unless properly controlled, vehicles leaving the site would deposit dirt and mud on local streets, which could be an additional source of airborne dust after it dries. PM₁₀ emissions would vary from day to day, depending on the nature and magnitude of construction activity and local weather conditions. PM₁₀ emissions would depend on soil moisture, silt content of soil, wind speed, and the amount of operating equipment. Larger dust particles would settle near the source, while fine particles would be dispersed over greater distances from the construction site.

Water or other soil stabilizers can be used to control dust, resulting in emission reductions of 50 percent or more. The SCAQMD has established Rule 403: Fugitive Dust, which would require the applicant to implement measures that would reduce the amount of particulate matter generated during the construction period.

In addition to dust-related PM₁₀ emissions, heavy trucks and construction equipment powered by gasoline and diesel engines would generate CO, SO_x, NO_x, VOCs, and some soot particulate (PM_{2.5} and PM₁₀) in exhaust emissions. If construction activities were to increase traffic congestion in the area, CO and other emissions from traffic would increase slightly while those vehicles are delayed. These emissions would be temporary and limited to the immediate area surrounding the construction site.

Construction emissions were estimated for the proposed Project using the California Emissions Estimator Model Version 2016.3.2 (CalEEMod), consistent with SCAQMD recommendations. The proposed Project would require demolition and removal of approximately 4 tons of debris from the existing Project site, which was accounted for in the CalEEMod analysis during each demolition phase. The Project would require cut-and-fill quantities of soil during grading and trenching to incorporate the new pump station infrastructure. Approximately 519 cubic yards (cy) of soil would be imported to the new pump station site, and approximately 350 cy of soil would be exported from the intertie meter located along Portola Parkway, between El Toro Road and Saddleback Parkway. The removal of debris and soil would require approximately 190 total truck trips over the

demolition, grading, and trenching phases. Emissions associated with vehicle and haul truck trips, in combination with anticipated construction equipment, were estimated using CalEEMod. For the purpose of this analysis, the construction schedule for all improvements was evaluated over a 12-month period, based on the construction schedule provided by IRWD. Construction-related emissions are presented in Table 4.3.B. CalEEMod output sheets are included in Appendix A.

Table 4.3.B: Short-Term Regional Construction Emissions

Construction Phase	Maximum Daily Regional Pollutant Emissions (lbs/day)							
	VOCs	NO _x	CO	SO _x	Fugitive PM ₁₀	Exhaust PM ₁₀	Fugitive PM _{2.5}	Exhaust PM _{2.5}

SO_x = sulfur oxides

VOCs = volatile organic compounds

As shown in Table 4.3.B, construction emissions would not exceed the SCAQMD thresholds for maximum daily construction emissions. Also, the proposed Project would comply with SCAQMD Rule 403, a measure required to reduce the amount of particulate matter generated during the construction period. Therefore, the proposed Project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or State AAQS.

Operational Emissions. Long-term air pollutant emissions associated with operation of the proposed Project include emissions from area, energy, and mobile sources. Area sources include architectural coatings and landscaping. Energy source emissions result from activities on site that use electricity. Mobile-source emissions are from vehicle trips associated with operation of the proposed Project.

PM₁₀ emissions result from running exhaust, tire and brake wear, and the entrainment of dust into the atmosphere from vehicles traveling on paved roadways. Entrainment of PM₁₀ occurs when vehicle tires pulverize small rocks and pavement and the vehicle wakes generate airborne dust. The contribution of tire and brake wear is small compared to the other PM emission processes. Gasoline-powered engines have small rates of particulate matter emissions compared with diesel-powered vehicles.

Long-Term Regional Air Quality Impacts. The Project’s long-term operation consists of a remotely monitored and operated Zone B to C Pump Station that would improve water quality within IRWD’s Zone B to Zone C recycled water system. The new facility would contain an enclosed pump station with an associated air-conditioned electrical room and an elevated surge tank platform adjacent to the pump building on site.

The proposed Project would include a back-up generator for emergency use that would be the only permanent piece of on-site equipment that would produce stationary source emissions. Typical operational emissions associated with the Project would be from off-site mobile sources (i.e., worker trips to the site) for on-site inspections or maintenance. Operation of the proposed Project would be conducted remotely and there would not be any full-time dedicated staff at the site. The proposed Project would not generate vehicle trips for normal day-to-day operations. However, in order to be conservative and capture any maintenance trips that do occur, this analysis assumes that the Project operations would generate 5 average daily trips (ADT). Air emissions associated with these trips and other emissions sources (i.e., building maintenance) were calculated using CalEEMod, and results are shown in Table 4.3.C.

Table 4.3.C: Project Operational Air Quality Emissions

Emissions Category	Pollutant Emissions (lbs/day)					
	VOCs	NO _x	CO	PM ₁₀	PM _{2.5}	SO _x
Area Sources	0.06	0.00	<0.01	0.00	0.00	0.00
Energy Sources	0.00	0.00	0.00	0.00	0.00	0.00
Mobile Sources	<0.01	0.04	0.14	0.05	0.01	0.01
Stationary Sources	0.01	0.04	0.03	<0.01	<0.01	<0.01
Total Project Emissions	0.07	0.04	0.17	0.05	0.01	0.01
SCAQMD Threshold	75.00	100.00	550.00	150.00	55.00	150.00
Exceeds?	No	No	No	No	No	No

Source: Compiled by LSA Associates, Inc. (December 2020).

CO = carbon monoxide

lbs/day = pounds per day

NO_x = nitrogen oxides

PM_{2.5} = particulate matter less than 2.5 microns in size

PM₁₀ = particulate matter less than 10 microns in size

SCAQMD = South Coast Air Quality Management District

SO_x = sulfur oxides

VOCs = volatile organic compounds

As indicated in Table 4.3.C, the proposed Project would not lead to any exceedances of air quality thresholds for operational emission criteria pollutants set forth by the SCAQMD; therefore, no mitigation would be required.

As discussed above, the proposed Project would not exceed construction or operational emission thresholds for the criteria pollutants established by the SCAQMD. Therefore, the proposed Project would not contribute a considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or State AAQS. No mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

c) Would the Project expose sensitive receptors to substantial pollutant concentrations?

Sensitive receptors are defined as people that have an increased sensitivity to air pollution or environmental contaminants. Sensitive receptor locations include schools, parks and playgrounds, day-care centers, nursing homes, hospitals, and residential dwelling units. The proposed Project has three components: the intertie site, the demolition of the existing Zone B Pump Station, and the proposed Zone B to C Pump Station. Sensitive receptors at each respective construction location were evaluated to identify the nearest sensitive receptors. The closest sensitive receptors are the single-family residences located approximately 525 ft south of the proposed intertie site. There are single-family homes approximately 897 ft to the southwest of the existing Zone B to C Pump Station adjacent to the IRWD Zone B East Reservoir. The proposed pump station would be located approximately 1,232 feet south of the closest sensitive receptors.

Local Significance Analysis. As discussed above, LSTs are developed based on the size or total area of the emission source, the ambient air quality in the SRA, and the distance to the Project. The proposed Project is located within the Saddleback Valley SRA (SRA 19). The nearest sensitive receptors to the Project site are single-family residences located south of the Intertie. The proposed Project construction emissions were compared to the LST screening tables in SRA 19 based on a 525 ft distance to the nearest sensitive receptor on 1 ac as defined by the SCAQMD.

LSTs apply to CO, NO₂, PM₁₀, and PM_{2.5} emissions during construction and operation at the discretion of the lead agency. Screening-level analysis of LSTs is only recommended for construction activities at project sites that are approximately 5 ac or less. The proposed Project site has an overall area of 0.413 ac. Therefore, to be conservative, the screening-level analysis of 1 ac was used for construction and operational LST comparisons.

Localized significance is determined by comparing the on-site-only portion of the construction and operational emissions with emissions thresholds derived by the SCAQMD to ensure that pollutant concentrations at nearby sensitive receptors would be below the LST thresholds established by the SCAQMD. Tables 4.3.D and 4.3.E compare the estimated construction and operational emissions to the LST thresholds set forth by the SCAQMD. Results of the LST analysis indicate that on-site emissions during the construction and operation periods would be well below the SCAQMD LSTs.

Table 4.3.D: Localized Significance Thresholds for Construction Emissions

	Emission Rates (lbs/day)			
	NO _x	CO	PM ₁₀	PM _{2.5}
On-Site Project Emissions	8.0	8.5	0.7	0.6
Localized Significance Thresholds	127.0	1,919.0	38.0	15.0
Exceeds?	No	No	No	No

Source: Compiled by LSA Associates, Inc. (December 2020).
 Note: SRA 19, 525-foot distance, based on 1-acre construction disturbance daily area.
 CO = carbon monoxide PM_{2.5} = particulate matter less than 2.5 microns in size
 lbs/day = pounds per day PM₁₀ = particulate matter less than 10 microns in size
 NO_x = nitrogen oxides SRA = Source Receptor Area

Table 4.3.E: Localized Significance Thresholds for Operational Emissions

	Emission Rates (lbs/day)			
	NO _x	CO	PM ₁₀	PM _{2.5}
On-Site Project Emissions	<0.1	<0.1	<0.1	<0.1
Localized Significance Thresholds	127.0	1,919.0	9.6	3.8
Exceeds?	No	No	No	No

Source: Compiled by LSA Associates, Inc. (December 2020).
 Note: SRA 19, 525-foot distance, based on 1-acre construction disturbance daily area.
 CO = carbon monoxide PM_{2.5} = particulate matter less than 2.5 microns in size
 lbs/day = pounds per day PM₁₀ = particulate matter less than 10 microns in size
 NO_x = nitrogen oxides SRA = Source Receptor Area

The proposed Project would also include a backup emergency generator. Emergency generators are regulated by the SCAQMD permitting process. IRWD would be required to obtain applicable permits from the SCAQMD to operate an emergency generator. Although emergency generators are intended only to be used in periods of power outages, monthly testing of the generator would be required. The air district limits testing to no more than 200 hours per year. The proposed generator would be located approximately 1,232 ft from the nearest residential receptor. Given the distance from the generator to the receptor location, due to dispersion, emissions would not result in any significant impacts to receptor locations.

Therefore, sensitive receptors would not be exposed to substantial criteria pollutant concentrations during the proposed Project’s construction or operation. No mitigation is required.

Significance Determination: Less Than Significant Impact
Mitigation Measures: No mitigation is required.

d) Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

The SCAQMD *CEQA Air Quality Handbook* (1993) identifies various secondary significance criteria related to odorous air contaminants. Substantial odor-generating sources include land uses such as agricultural activities, feedlots, wastewater treatment facilities, landfills, or heavy manufacturing uses. The proposed Project would not construct any such uses or include other activities that would result in potentially significant odor impacts. Some objectionable odors may emanate from the operation of diesel-powered construction equipment during construction of the proposed Project. However, objective odors, if any, would be temporary and are not likely to be noticeable for extended periods of time beyond the Project site. Therefore, no significant impacts related to objectionable odors would result from the proposed Project, and no mitigation is required.

Significance Determination: Less Than Significant Impact
Mitigation Measures: No mitigation is required.

4.4 BIOLOGICAL RESOURCES

<i>Would the project:</i>	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

The following analysis summarizes the potential impacts of the proposed Project on biological resources. The potential impacts to biological resources were evaluated using the Project Description, a literature search (i.e., California Natural Diversity Database [CNDDDB], California Native Plant Society [CNPS], and Information for Planning and Consultation [IPaC] database), and existing conditions and land use designations. In addition, a site visit was conducted on December 7, 2020 to assess the existing biological resources associated with the approximately 0.413 ac proposed pump station site. Refer to Appendix B for the Biological Resources Assessment prepared for the proposed Project.¹

¹ LSA Associates, Inc. 2020a. Biological Resources Assessment for the Lake Forest Zone B to C Pump Station Project. December 9.

4.4.1 Impact Analysis

- a) *Would the Project have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?*

The Project site consists primarily of bare ground and dirt pads surrounding an enclosed dirt and gravel area that was previously occupied by Lake Forest Well No. 5. The Project site is surrounded by Serrano Creek Trail to the north, commercial uses to the west and east, and Lake Forest Drive to the south. Although several special-status plant species were identified in the records searches and literature review as occurring or potentially occurring in the Project vicinity and surrounding areas, there are no special-status plant species within or adjoining the Project site. Of the special-status animal species identified in the records searches and literature review, none were observed on site at the time of the site survey. While it is more likely that certain special-status bats (i.e., western mastiff bat [*Eumops perotis californicus*] and western red bat [*Lasiurus blossevillii*]) and raptors (i.e., Cooper's hawk [*Accipiter cooperii*] and white-tailed kite [*Elanus leucurus*]) may roost/nest in the more densely forested areas of the nearby creek and trail, these species could potentially forage within the vegetated areas on site. However, since the existing conditions associated with the Project site are highly disturbed and degraded and the quantity of impacts is small, the loss of this small quantity of disturbed habitat is not likely to result in a substantial adverse impact to these species. Therefore, impacts to habitat as a result of the proposed Project would be less than significant, and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

- b) *Would the project have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?*

As described in the Biological Resources Assessment for the Lake Forest Zone B to C Pump Station Project,¹ no riparian habitat exists within the Project site. However, riparian habitat associated with Serrano Creek is located adjacent to the Project site. Project construction would occur within the limits of the 0.413 ac Project site and would not result in the removal of, or other direct impacts to, this riparian habitat or any other sensitive natural communities. However, indirect impacts due to noise and vibration disturbances during construction work could potentially disrupt or otherwise impact bat roosting and/or bird nesting activities in adjacent habitat associated with Serrano Creek, which is approximately 100 ft from the Project site. Adhering to Mitigation Measure BIO-1, General Nesting Bird Surveys and Avoidance of Active Nests, and Mitigation Measure BIO-2, Roosting Bat Survey, will avoid potential indirect impacts to the species. With implementation of Mitigation Measures BIO-1 and BIO-2, impacts would be less than significant.

¹ LSA Associates, Inc. 2020a. Biological Resources Assessment for the Lake Forest Zone B to C Pump Station Project. December 9.

Significance Determination: Less Than Significant with Mitigation Incorporated

Mitigation Measures:

BIO-1 General Nesting Bird Surveys and Avoidance of Active Nests. In the event that any construction, vegetation clearing, or grading activities (including disking and demolition) should occur between February 1 and September 1, a qualified biologist shall conduct a nesting bird survey within 5 days of commencement of construction activities to confirm the absence of nesting birds. If active nesting of birds is observed within 500 feet (ft) of the designated construction area during surveys, the biologist, in consultation with Irvine Ranch Water District (IRWD), will determine suitable buffers around the active nests (e.g., a minimum of 50 ft for passerines and 250 ft for raptors). The buffer areas must be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests. Prior to commencement of grading activities, IRWD shall verify that all Project grading and construction plans include specific documentation of compliance with the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code Section 3503. This would include completion of pre-construction survey reports that have been reviewed by staff and verification that appropriate buffers (if needed) have been noted on the plans and established in the field using orange snow fencing.

BIO-2 Roosting Bat Survey. A qualified bat biologist shall conduct a pre-construction roosting bat survey of the Project site and adjacent habitat to determine if any bats are present and to identify the need for any appropriate protective measures. This pre-construction roosting bat survey, consisting of a nighttime exit count and acoustic data collection, should be conducted during the bat maternity season (April 1 through August 31) well in advance of construction in order to provide adequate time for potential mitigation planning. To the greatest extent feasible, tree trimming/removal activities should be conducted outside the bat maternity season, which occurs from April 1 through August 31, to avoid direct impacts to nonvolant (flightless) young that may roost in trees within and adjacent to the Project site. If trimming or removal of trees during the bat maternity season (April 1 through August 31) cannot be avoided, a qualified biologist shall monitor the tree removal or trimming activities.

c) Would the project have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Although Serrano Creek is located approximately 100 ft from the Project site, there are no jurisdictional wetlands or other State and/or federally regulated waterbodies within or adjoining the Project site. As a result, the proposed Project would not impact any jurisdictional waterbodies, including wetlands. Therefore, no mitigation would be required.

Significance Determination: No Impact

Mitigation Measures: No mitigation is required.

- d) *Would the project interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?*

While wildlife use Serrano Creek and the Serrano Creek Trail for movement purposes, the proposed Project would not substantially interfere with wildlife movement in the vicinity of the Project site. Although artificial lighting during construction activities could potentially impede or alter wildlife movement activities, implementation of Mitigation Measure BIO-3, Construction Lighting, would avoid impacts to nocturnal wildlife using Serrano Creek and the Serrano Creek Trail during nighttime hours. With implementation of Mitigation Measure BIO-3, impacts to wildlife movement would be reduced to less than significant.

Significance Determination: Less Than Significant with Mitigation Incorporated

Mitigation Measure:

- BIO-3 Construction Lighting.** No nighttime construction work shall occur within 200 ft of Serrano Creek, and no construction lighting shall be placed within 200 ft of Serrano Creek unless a qualified biologist confirms that the lighting does not illuminate Serrano Creek.

- e) *Would the project conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?*

The proposed Project is not expected to conflict with any local policies or ordinances protecting biological resources. In compliance with the City of Lake Forest Municipal Code (Section 6.20.025), if any eucalyptus trees on the Project site are to be removed or trimmed between April 1 and November 1, IRWD must first obtain a permit from the City for the transportation of any logs, branches, or trunks to an off-site location for disposal. In addition, the removal and/or trimming of trees could inadvertently result in the spread of Invasive Shot Hole Borers (ISHBs), if present in the trees to be removed or trimmed. However, with implementation of Mitigation Measure BIO-4, impacts would be reduced to less than significant.

Significance Determination: Less Than Significant with Mitigation Incorporated

Mitigation Measure:

- BIO-4 Invasive Shot Hole Borers (ISHBs).** A designated biologist familiar with the signs of ISHBs shall survey trees on the Project site that are designated for removal or trimming. Surveys should be conducted at least 30 days prior to removal or trimming activities. If any tree is determined to be infested/infected by ISHBs, a control plan should be prepared and submitted to CDFW for review and approval. At a minimum, the control plan should include methods of control, removal, and appropriate disposal techniques to prevent the spread of ISHBs.

f) Would the project conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

The Project site is located within the Orange County Central and Coastal Natural Communities Conservation Plan/Habitat Conservation Plan (NCCP/HCP) planning area but outside the boundaries of the NCCP/HCP Reserve System. The Reserve System boundary is located approximately 0.8 mi northeast of the Project site. The Project site is in an area identified in the NCCP/HCP as urbanized and is located in an area designated for development. Development of the proposed Project would not result in the removal of any sensitive habitat species identified in the Orange County Central and Coastal NCCP/HCP. The proposed Project would not conflict with local ordinances or the adopted HCP, NCCP, or other approved local, regional, or State HCP. Therefore, the proposed Project would result in a less than significant impact related to local ordinances and the adopted NCCP/HCP, and no mitigation is required.

Significance Determination: No Impact

Mitigation Measures: No mitigation is required.

4.5 CULTURAL RESOURCES

<i>Would the project:</i>		Less Than Significant			
		Potentially Significant Impact	With Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b)	Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c)	Disturb any human remains, including those interred outside of dedicated cemeteries?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

4.5.1 Impact Analysis:

a) *Would the Project cause a substantial adverse change in the significance of a historical resource pursuant to §15064.5?*

CEQA defines a “historical resource” as a resource that meets one or more of the following criteria: (1) listed in, or determined eligible for listing in, the California Register of Historical Resources (California Register); (2) listed in a local register of historical resources as defined in PRC Section 5020.1(k); (3) identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1(g); or (4) determined to be a historical resource by a project’s Lead Agency (PRC Section 21084.1 and *State CEQA Guidelines* Section 15064.5[a]).

The California Register defines a “historical resource” as a resource that meets one or more of the following criteria: (1) associated with events that have made a significant contribution to the broad patterns or local or regional history of the cultural heritage of California or the United States; (2) associated with the lives of persons important to local, California, or national history; (3) embodies the distinctive characteristics of a type, period, region, or method of construction or represents the work of a master or possesses high artistic values; or (4) has yielded, or has the potential to yield, information important to the prehistory or history of the local area, California, or the nation.

Implementation of the proposed Project would not cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5 of the *State CEQA Guidelines* or the California Register. As detailed in the Cultural Resources Study for the Lake Forest Zone B to C Pump Station Project (Appendix C),¹ a records search was conducted on December 4, 2020, to identify historic resources in the Project area. There are no structures on the Project site that are eligible for listing in the California Register, listed in a local register of historic places, or identified as or determined to be a historic resource by the City. Therefore, the proposed Project would not cause a substantial adverse change in the significance of a historical resource, and no mitigation is required.

¹ LSA Associates, Inc. 2020b. Cultural Resources Study for the Lake Forest Zone B to C Pump Station Project. December 11.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

b) Would the project cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5?

As detailed in the Cultural Resources Study for the Lake Forest Zone B to C Pump Station Project (Appendix C),¹ a records search was conducted on December 4, 2020, to identify historic resources in the Project area. The records search was conducted by Michelle Galaz at the South Central Coastal Information Center (SCCIC) of the California Historical Resources Information System (CHRIS) at California State University, Fullerton. The SCCIC houses the pertinent archaeological and historic site and survey information necessary to determine whether cultural resources are known to exist within the Project area. In addition, the Built Environment Resources Directory, California Historical Landmarks, California Points of Historical Interest, *Five Views: An Ethnic Historic Site Survey for California*, and California Inventory of Historic Resources were reviewed.

The record search results indicate that eight previous cultural resources studies have included the Project site. There have been 20 additional studies conducted within 0.25 mi of the Project site. In addition, 11 pre-contact archaeological resources have been previously recorded within 0.25 mi of the Project site.

The cultural resources study, consisting of a record search and a field survey, did not identify archaeological cultural resources within the Project site. In addition, the two Project component locations with proposed ground disturbance (i.e., the proposed new pump station and proposed intertie locations) have been monitored for archaeological resources during previous ground-disturbing activities with negative findings for cultural resources.^{2,3} Given the previous disturbance of the Project site and the negative findings during archaeological monitoring of the previous ground disturbance, the likelihood of encountering subsurface archaeological cultural resources during ground-disturbing construction activities is low.

However, due to the number of pre-contact cultural resources that have been recorded within 0.25 mi of the Project site, IRWD should verify that all construction and grading plans include requirements specifying that if archaeological resources are discovered during excavation, grading, or construction activities, work shall cease within 50 ft of the find until a qualified archaeologist can evaluate the find. Compliance with Mitigation Measure CUL-1 would ensure that potential impacts to unknown buried archaeological resources would be reduced to a less than significant level.

¹ LSA Associates, Inc. 2020b. Cultural Resources Study for the Lake Forest Zone B to C Pump Station Project. December 11.

² Brock, James P. 1991. Report on Archaeological Monitoring of Rough Grading of Portola Parkway at Aliso Creek, El Toro, California (Station 13+67 to El Toro Road). Archaeological Advisory Group. On file, South Central Coastal Information Center, California State University, Fullerton (Accession No. OR-01156).

³ Gust, Sherri. 1999. Archaeological and Paleontological Monitoring Report for Serrano Creek Business Center, Lake Forest, California. RMW Paleo Associates, Inc. On file, South Central Coastal Information Center, California State University, Fullerton (Accession No. OR-04358).

Significance Determination: Less Than Significant with Mitigation Incorporated**Mitigation Measure:**

CUL-1 Cultural Resources. Prior to commencement of construction activities, Irvine Ranch Water District shall verify that the Project includes requirements specifying that if archaeological resources are discovered during excavation, grading, or construction activities, work shall cease within 50 feet (ft) of the find until a qualified archaeologist from the Orange County List of Qualified Archaeologists has evaluated the find in accordance with federal, State, and local guidelines to determine whether the find constitutes a “unique archaeological resource,” as defined in Section 21083.2(g) of the California Public Resources Code (PRC). Personnel of the proposed Project shall not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the Project site. The found deposits shall be treated in accordance with federal, State, and local guidelines, including those set forth in PRC Section 21083.2.

c) Would the project disturb any human remains, including those interred outside of dedicated cemeteries?

As stated in Response 4.5(c), given the previous disturbance of the Project site and the negative findings during archaeological monitoring of the previous ground disturbance, the likelihood of encountering subsurface archaeological cultural resources during ground-disturbing construction activities is very low. In the unlikely event that human remains are encountered during Project excavation, the proper authorities would be notified, and standard procedures for the respectful handling of human remains during the earthmoving activities would be adhered to. Construction contractors are required to adhere to California Code of Regulations (CCR) Section 15064.5(e), PRC Section 5097, and Section 7050.5 of the State’s Health and Safety Code. To ensure proper treatment of burials, in the event of an unanticipated discovery of a burial, human bone, or suspected human bone, the law requires that all excavation or grading in the vicinity of the find halt immediately, the area of the find be protected, and the contractor immediately notify the County Coroner of the find. All parties are required to comply with the provisions of CCR Section 15064.5(e), PRC Section 5097.98, and Section 7050.5 of the State’s Health and Safety Code. Furthermore, compliance with these provisions (specified in Mitigation Measure CUL-2), would ensure that any potential impacts to unknown buried human remains would be less than significant by ensuring appropriate examination, treatment, and protection of human remains as required by State law.

Significance Determination: Less than Significant with Mitigation Incorporated**Mitigation Measure:**

CUL-2 Human Remains. In the unlikely event that human remains are encountered on the Project site, California Health and Safety Code 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to California PRC Section 5097.98. The County Coroner shall be notified immediately if any human remains are found. If the remains are determined to be prehistoric, the coroner shall notify the Native American Heritage Commission, which will determine and notify the Most Likely Descendant. With the

permission of Irvine Ranch Water District (IRWD) or an authorized representative, the Most Likely Descendant may inspect the site of discovery. IRWD shall meet and confer with the Most Likely Descendant regarding their recommendations prior to disturbing the site with further construction activity.

4.6 ENERGY

		Less Than Significant			
		Potentially Significant Impact	With Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>					
a)	Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b)	Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

4.6.1 Impact Analysis

a) *Would the project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation?*

The proposed Project’s consumption of energy during construction and operation is calculated via CalEEMod Version 2016.3.2, as detailed in Appendix A.

Construction-Period Energy Use. The tentative construction schedule shows the proposed Project construction would last approximately 12 months. Construction would require energy for the manufacture and transportation of building materials, preparation of the site and excavation activities, utility installation, paving, construction, and architectural coatings (painting). Petroleum fuels (e.g., diesel and gasoline) would be the primary sources of energy for these activities. However, energy usage on the project site during construction would be temporary in nature.

The CalEEMod output for energy consumption incorporates project compliance with SCAQMD Rule 431.2, Title 13-Section 2449 of the CCR, and the California Department of Resources Recycling and Recovery (CalRecycle) Green Building Program regulations, which include implementation of standard control measures for equipment emissions and materials recycling. Adherence to these regulations, including the implementation of Best Available Control Measures (BACMs), is a standard requirement for any construction or ground disturbance activity occurring within the Basin. BACMs include, but are not limited to:

- Requirements that the project proponent utilize only low-sulfur fuel having a sulfur content of 15 parts per million by weight or less;
- Ensure off-road vehicles (i.e., self-propelled diesel-fueled vehicles 25 horsepower and up that were not designed to be driven on road) limit vehicle idling to 5 minutes or less;
- Register and label vehicles in accordance with the CARB Diesel Off-Road Online Reporting System;
- Restrict the inclusion of older vehicles into fleets; and

- Retire, replace, or repower older engines or install Verified Diesel Emission Control Strategies (i.e., exhaust retrofits).

Additionally, the construction contractor must recycle/reuse at least 65 percent of the construction material (including, but not limited to, proposed aggregate base, soil, mulch, vegetation, concrete, lumber, metal, and cardboard) and use “Green Building Materials” (e.g., those materials that are rapidly renewable or resource efficient and recycled and manufactured in an environmentally friendly way) for at least 10 percent of the project in accordance with CalRecycle regulations. Through compliance with SCAQMD Rule 431.2, Title 13-Section 2449 of the CCR, and the CalRecycle Green Building Program as a matter of regulatory policy, construction of the project would demand only the energy required, and impacts from wasteful, inefficient, or unnecessary energy consumption would be less than significant. No mitigation is required for short-term construction impacts.

Operational Energy Use. During Project operation, electricity would be the main form of energy consumed on site. Natural gas would not be available at the proposed Project site as a source of energy. Electricity would be used primarily for lighting and water pumping. A stand-by backup diesel powered 200-kilowatt (kW) emergency generator would be installed and maintained on site. Estimated energy, natural gas, and employee gasoline-usage estimates are shown in Table 4.6.A.

Table 4.6.A: Estimated Annual Project Energy Use

Land Use	Electricity Use (kWh/yr)	Natural Gas (Btu/yr)	Employee Vehicle Gasoline (gal/yr)
General Light Industrial Total	19,300	0	996

Source: Compiled by LSA Associates, Inc. (December 2020).

¹ The land use type General Light Industrial is the best representation for the proposed Project based on projected function and energy uses.

Btu/yr = British thermal units per year

gal/yr = gallons per year

kWh/yr = kilowatt-hours per year

As identified in Table 4.6.A, demand from proposed uses would generate 19,300 kilowatt-hours (kWh) of electricity. No on-site natural gas usage would occur. The Project would result in energy usage through consumption of gasoline for project-related motor vehicle trips. Using the 2017 fuel economy estimate of 22.3 miles per gallon (mpg),¹ the proposed Project would consume approximately 996 gallons of gasoline annually using an estimated 22,212 annual vehicle miles traveled.

The State of California provides a minimum standard for building design and construction standards through Title 24 of the CCR, known as the California Building Code (CBC). The CBC is updated every 3 years, and the current 2019 CBC went into effect on January 1st, 2020. Compliance with CCR Title 24 is mandatory at the time new building permits are issued by local governments. The California

¹ United States Department of Transportation (USDOT), Bureau of Transportation Statistics. Table 4-23, Average Fuel Efficiency of U.S. Light Duty Vehicles. Website: <https://www.bts.gov/content/average-fuel-efficiency-us-light-duty-vehicles> (accessed November 2020).

Building Standards Commission adopted Part 11 of the Title 24 Building Energy Efficiency Standards (also referred to as the California Green Building Standards Code, or CALGreen) in 2010 as part of the State's efforts to reduce greenhouse gas (GHG) emissions and energy consumption from residential and nonresidential buildings. CALGreen code covers the following five categories: (1) planning and design, (2) energy efficiency, (3) water efficiency and conservation, (4) material conservation and resource efficiency, and (5) indoor environmental quality. The County of Orange (County) has adopted both the CBC and CALGreen Code pertaining to energy conservation. The projected energy use of the project is representative of a worst-case scenario because the estimates do not account for energy efficiency measures that would be incorporated into the proposed Project.

Electricity is provided in the State through a complex grid of power plants and transmission lines. In 2018, California's in-state electric generation totaled 194,842 gigawatt-hours (GWh); the State's total system electric generation, which includes imported electricity, totaled 285,488 GWh.¹ Population growth is the primary source of increased energy consumption in the State. Due to population projections, annual electricity use is anticipated to increase by approximately 1 percent per year through 2027.² The Project's net electricity usage would be a minimal fraction of the total energy use in the State and would not represent a substantial demand on available electricity resources.

The average fuel economy for light-duty vehicles (autos, pickups, vans, and sport utility vehicles [SUVs]) in the United States has steadily increased from about 14.9 mpg in 1980 to 22.3 mpg in 2017.³ As stated previously, implementation of the proposed Project would increase the project-related annual gasoline demand by 996 gallons of gasoline. Automobiles operated by construction workers and employees are subject to fuel economy and efficiency standards applied throughout the State. As such, the fuel efficiency of vehicles associated with the project site would increase throughout the life of the project as the fuel efficiency of vehicles continues to improve in order to meet the State's 2050 GHG emission reduction goals. In addition, as the price and efficiency of electric passenger vehicles improve, more people will buy them, thereby reducing the number and use of fossil fuel-dependent vehicles on the road. The result is a decrease in the gasoline fuel demand in the transportation sector, which includes transit busses and passenger vehicles.

Increasingly stringent electricity and fuel efficiency standards combined with compliance with the latest building code standards and improved alternative transportation infrastructure throughout the region would ensure that operation of the project would demand only the energy required, and impacts from wasteful, inefficient, or unnecessary energy consumption would be less than significant.

³ United States Department of Transportation (USDOT), Bureau of Transportation Statistics. Table 4-23, Average Fuel Efficiency of U.S. Light Duty Vehicles. Website: <https://www.bts.gov/content/average-fuel-efficiency-us-light-duty-vehicles> (accessed November 2020).

Construction and operation of the proposed Project would not result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources. Impacts would be less than significant, and mitigation is not required.

Significance Determination: Less Than Significant Impact

Mitigation Measure: No mitigation is required.

b) Would the project conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

The proposed Project would comply with the CBC and CALGreen Code pertaining to energy conservation standards in effect at the time of construction and during operation at the facility. Therefore, the proposed Project would be consistent with State and local applicable plans related to renewable energy and energy efficiency. No impact would occur, and no mitigation is required.

Significance Determination: No Impact

Mitigation Measure: No mitigation is required.

4.7 GEOLOGY AND SOILS

f)	Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

4.7.1 Impact Analysis

- a) *Would the Project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:*
 - i) *Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.*

The Alquist-Priolo Fault Zoning Act was signed into law in 1972 and went into effect in 1973. The purpose of this Act was to require the State Geologist to delineate “Earthquake Fault Zones” (EFZs) along known active faults in California. If a city or county was affected by the EFZs, they would be required to regulate certain development projects within the zones. As with all of Southern California, the Project site is subject to strong ground motion resulting from earthquakes on nearby faults. According to the Geotechnical Study¹ prepared for the Project, the San Joaquin Hills Blind Thrust Fault and the Newport-Inglewood-Rose Canyon Fault Zone are the two closest, active fault zones to the Project site, and are located approximately 3.5 mi and 10.5 mi southwest of the Project

¹ Kleinfelder. 2020. Draft Geotechnical Study. April 15.

site, respectively. There are, however, no known faults crossing the Project site. Furthermore, compliance with the CBC and the recommendations in the Final Geotechnical Study would further minimize impacts with regards to exposure to a known earthquake fault. Therefore, impacts related to the rupture of a known earthquake fault as depicted on the most recent Alquist-Priolo Earthquake Fault Zoning Map would be less than significant. No mitigation is required.

Significance Determination: Less than Significant Impact

Mitigation Measures: No mitigation is required.

ii) Would the Project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving strong seismic ground shaking?

The Project site, like all of Southern California, is in an active seismic region. Ground shaking resulting from earthquakes associated with both nearby and more distant faults is likely to occur. The proposed Project would be required to comply with the most current CBC standards, which stipulate appropriate seismic design provisions that shall be implemented with Project design and construction. Compliance with the CBC and the recommendations in the Final Geotechnical Study would reduce any potential impacts related to on-site seismic ground shaking to a less than significant level. While the Project site would be exposed to seismic ground shaking, the proposed Project would not cause or exacerbate strong seismic ground shaking that would expose people or structures to significant risk of injury or loss of property. No mitigation is required.

Significance Determination: Less than Significant Impact

Mitigation Measures: No mitigation is required.

iii) Would the Project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving seismic-related ground failure, including liquefaction?

Liquefaction commonly occurs when three conditions are present simultaneously: (1) high groundwater; (2) relatively loose, cohesion-lacking (sandy) soil; and (3) earthquake-generated seismic waves. Liquefaction effects can manifest in several ways, including loss of bearing, lateral spread, dynamic settlement, and flow failures.

According to the California Geological Survey, the Project site is within a liquefaction zone.¹ Additionally, as discussed in the Draft Geotechnical Study,² due to the presence of groundwater at 40 ft and 46.5 ft below ground surface (bgs) and the presence of nearby, active faults that may produce strong ground shaking during an earthquake, liquefaction and its adverse effects (e.g. dynamic settlement and lateral spreading) may occur at the Project site. However, compliance with the CBC and the recommendations in the Final Geotechnical Study would reduce any potential impacts related to liquefaction to a less than significant level. Therefore, impacts involving seismic-

¹ California Department of Conservation. 2019. CGS Information Warehouse. Website: <https://maps.conservation.ca.gov/cgs/informationwarehouse/regulatorymaps/> (accessed December 10, 2020).

² Kleinfelder. 2020. Draft Geotechnical Study. April 15.

related ground failure, including liquefaction, would be less than significant, and no mitigation is required.

Significance Determination: Less than Significant Impact

Mitigation Measures: No mitigation is required.

iv) Would the Project directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving landslides?

Seismically induced landslides and other slope failures are common occurrences during or soon after earthquakes in areas with significant ground slopes. According to the California Geological Survey, the Project site is located within a landslide zone.¹ However, the Project site is relatively flat and lacks significant slopes, and no significant slopes would be constructed as part of the proposed Project. Therefore, the potential for project impacts involving seismically induced landslides is less than significant, and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

b) Would the Project result in substantial soil erosion or the loss of topsoil?

During construction activities, excavated soil would be exposed, and there would be an increased potential for soil erosion and sedimentation compared to existing conditions. However, as discussed in Response 4.10(c)(i), because construction of the Project would disturb less than 1 ac of soil, the proposed Project is not subject to the requirements of the State Water Resources Control Board (SWRCB) Construction General Permit. Therefore, preparation of a Storm Water Pollution Prevention Plan (SWPPP) and implementation of Erosion Control and Sediment Control best management practices (BMPs) are not required. Because of the small amount of ground disturbance during construction, Project construction activities have a low potential to result in substantial soil erosion or loss of topsoil. In the proposed condition, the majority of the Project site would be an impervious surface area that would not be prone to erosion or loss of topsoil; therefore, substantial on-site erosion and loss of topsoil would not occur. For these reasons, impacts related to erosion or loss of topsoil would be less than significant, and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

¹ California Department of Conservation. 2019. CGS Information Warehouse. Website: <https://maps.conservation.ca.gov/cgs/informationwarehouse/regulatorymaps/> (accessed December 10, 2020).

- c) Would the Project be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?*

Landslides and other forms of mass wasting, including mud flows, debris flows, and soil slips, occur as soil moves downslope under the influence of gravity. Landslides are frequently triggered by intense rainfall or seismic shaking. Lateral spreading is a phenomenon that can be associated with liquefaction when sloping ground is present. As discussed in Response 4.7(a)(iv), because the Project site is in a relatively flat area, landslides or other forms of natural slope instability do not represent a significant hazard to the Project or the surrounding area. Additionally, as discussed in Response 4.7(a)(iii), although liquefaction and its adverse effects (e.g., dynamic settlement and lateral spreading) could occur at the Project site, compliance with the CBC and the recommendations in the Final Geotechnical Study would reduce any potential impacts related to liquefaction to a less than significant level. Therefore, the Project would not be located on a geologic unit or soil that is unstable or that would become unstable, and no mitigation is required.

Significance Determination: Less Than Significant Impact
Mitigation Measures: No mitigation is required.

- d) Would the Project be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?*

As described in the Draft Geotechnical Study,¹ the near surface soils consist of primarily silty to clayey sands with varying amounts of gravel within the artificial fill, which is located approximately 4 ft to 6 ft bgs. These near surface soils have a low to medium expansion potential. Therefore, impacts related to expansive soils would be less than significant, and no mitigation is required.

Significance Determination: Less Than Significant Impact
Mitigation Measures: No mitigation is required.

- e) Would the Project have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?*

The proposed Project does not include construction of septic tanks or connections to septic systems or alternative wastewater disposal systems. Therefore, the proposed Project would not result in impacts related to the soils capability to adequately support the use of septic tanks or alternative wastewater disposal systems, and no mitigation is required.

Significance Determination: Less Than Significant Impact
Mitigation Measures: No mitigation is required.

¹ Kleinfelder. 2020. Draft Geotechnical Study. April 15.

f) *Would the Project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*

According to the Paleontological Analysis of the Lake Forest Zone B to C Pump Station Project (Appendix D), the Project area contains Artificial Fill, which has no paleontological sensitivity; Young Alluvial Fan Deposits, which have low paleontological sensitivity from the surface to a depth of 10 ft and high paleontological sensitivity below that mark; and Very Old Axial Channel Deposits and the Oso Member of the Capistrano Formation, both of which have high paleontological sensitivity. However, excavation for this proposed Project is expected to be limited in terms of location, as well as vertical and horizontal extent. At the existing pump station, which is the only place where the Oso Member of the Capistrano Formation is mapped, there would be no excavation. At the proposed intertie location, excavation is expected to extend to a depth of 6.5 ft and remove only 370 cy. At the proposed pump station site, excavation for the building and retaining wall will extend to a depth of 3 ft, but those facilities appear to be located in the area mapped with Young Alluvial Fan Deposits. Therefore, the only activity that has the potential to impact paleontological resources is in the area of the proposed intertie; however, as noted above, this activity is limited in depth and extent, making the potential for paleontological resources to be present and impacted by Project development very low. As such, in the unlikely event that paleontological resources are encountered during Project construction, work in the immediate area of the discovery shall be halted, and IRWD shall retain a professional paleontologist to assess the discovery (as specified in Mitigation Measure PALEO-1). With implementation of Mitigation Measure PALEO-1, potential impacts to paleontological resources would be reduced to a less than significant level.

At the completion of Project construction, the proposed Project would not result in further disturbance of native soils on the Project site. Therefore, operation of the proposed Project would not result in a substantial adverse change in the significance of a paleontological resource as defined in Section 15064.5 of the *State CEQA Guidelines*, and no additional mitigation is required.

Significance Determination: Less Than Significant with Mitigation Incorporated
Mitigation Measure:

PALEO-1 Paleontological Resources. In the event that paleontological resources are encountered, work in the immediate area of the discovery shall be halted, and Irvine Ranch Water District (IRWD) shall retain a professional paleontologist who meets the qualifications established by the Society of Vertebrate Paleontology to assess the discovery. The qualified professional paleontologist shall make recommendations regarding the treatment and disposition of the discovered resources, as well as the need for subsequent paleontological mitigation, which may include, but not be limited to, paleontological monitoring; collection of observed resources; preservation, stabilization, and identification of collected resources; curation of scientifically significant resources into a museum repository, and preparation of a monitoring report of findings.

4.8 GREENHOUSE GAS EMISSIONS

		Less Than Significant			
		Potentially Significant Impact	With Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>					
a)	Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b)	Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

4.8.1 Technical Background

GHGs (so called because of their role in trapping heat near the surface of the Earth) emitted by human activity are implicated in global climate change, commonly referred to as “global warming.” These GHGs contribute to an increase in the temperature of the Earth’s atmosphere by transparency to short wavelength visible sunlight, but near opacity to outgoing terrestrial long wavelength heat radiation in some parts of the infrared spectrum. The principal GHGs are carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), O₃, and water vapor. For the purposes of planning and regulation, Section 15364.5 of the CCR defines GHGs to include, but are not limited to, CO₂, CH₄, N₂O, hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), nitrogen trifluoride (NF₃), and sulfur hexafluoride (SF₆). Fossil fuel consumption in the transportation sector (on-road motor vehicles, off-highway mobile sources, and aircraft) is the single largest source of GHG emissions, accounting for approximately half of GHG emissions globally. Industrial and commercial sources are the second-largest contributors of GHG emissions with about one-fourth of total emissions.

Certain gases, such as water vapor, are short-lived in the atmosphere. Others remain in the atmosphere for significant periods of time, contributing to climate change in the long term. Water vapor is excluded from the list of GHGs above because it is short-lived in the atmosphere and its atmospheric concentrations are largely determined by natural processes, such as oceanic evaporation.

These gases vary considerably in terms of global warming potential (GWP), which is a concept developed to compare the ability of each GHG to trap heat in the atmosphere relative to another gas. GWP is based on several factors, including the relative effectiveness of a gas to absorb infrared radiation and the length of time that the gas remains in the atmosphere (“atmospheric lifetime”). The GWP of each gas is measured relative to CO₂, the most abundant GHG. The definition of GWP for a particular GHG is the ratio of heat trapped by 1 unit mass of the GHG to the ratio of heat trapped by 1 unit mass of CO₂ over a specified time period. GHG emissions are typically measured in terms of pounds or tons of “CO₂ equivalents” (CO₂e).

On June 1, 2005, Governor Arnold Schwarzenegger signed Executive Order (EO) S-3-05, which proclaims that California is vulnerable to the impacts of climate change. It declares that increased temperatures could reduce snowpack in the Sierra Nevada Mountains; could further exacerbate

California's air quality problems; and could potentially cause a rise in sea levels. In an effort to avoid or reduce the impacts of climate change, EO S-3-05 calls for a reduction in GHG emissions to the year 2000 level by 2010, to year 1990 levels by 2020, and to 80 percent below 1990 levels by 2050.

Assembly Bill (AB) 32, the California Global Warming Solutions Act of 2006 (California Health and Safety Code §38501) establishes a State goal of reducing GHG emissions to 1990 levels by the year 2020. On September 8, 2016, the Governor signed Senate Bill (SB) 32 to codify the GHG reduction goals of EO B-30-15, requiring the State to reduce GHG emissions by 40 percent below 1990 levels by 2030 (Health and Safety Code Section 38566). This goal is expected to keep the State on track to meeting the goal set by EO S-3-05 of reducing GHG emissions by 80 percent below 1990 levels by 2050.

Orange County has not formally adopted a quantitative GHG emissions significance criterion to date. In October 2008, the SCAQMD released a *Draft Guidance Document – Interim CEQA Greenhouse Gas Significance Threshold*¹ (Draft Guidance Document) that suggested a tiered approach to analyzing GHG emissions in a project level analysis. In the Draft Guidance Document, the SCAQMD provided numerical thresholds that can be applied to smaller projects (like the proposed Project). The interim GHG significance threshold is 3,000 metric tons (MT) of CO₂e per year for all residential and commercial land uses under CEQA. If the project emissions are less than the applicable numerical threshold, then the project's effects related to GHG emissions would be less than significant and the analysis is complete. This 3,000 MT CO₂e per year threshold is selected by IRWD as appropriate for the proposed Project.

For the purpose of this technical analysis, the concept of CO₂e is used to describe how much global warming a given type and amount of GHG may cause, using the functionally equivalent amount or concentration of CO₂ as the reference. Individual GHGs have varying global warming potentials and atmospheric lifetimes. CO₂e is a consistent methodology for comparing GHG emissions because it normalizes various GHGs to the same metric. The GHG emissions estimates were calculated using CalEEMod. CalEEMod is an air quality modeling program that estimates air pollution emissions in pounds per day or tons per year for various land uses, area sources, construction projects, and project operations. Mitigation measures can also be specified to analyze the effects of mitigation on Project emissions.

4.8.2 Impact Analysis

a) *Would the Project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?*

Construction and operation of the proposed Project would generate GHG emissions, with the majority of energy consumption (and associated generation of GHG emissions) occurring during the Project's construction period (as opposed to its operation). Operational emissions would be minimal due to the Project's automated equipment, which allows for remote operation.

¹ South Coast Air Quality Management District. 2008a. *Draft Guidance Document – Interim CEQA Greenhouse Gas (GHG) Significance Threshold*. October. Website: [http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-\(ghg\)-ceqa-significance-thresholds/ghgattachmente.pdf](http://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/ghgattachmente.pdf) (accessed December 2020).

Construction Emissions. Construction activities, such as site preparation, excavation, on-site heavy-duty construction vehicles, equipment hauling materials to and from the site, and motor vehicles transporting the construction crew would produce combustion emissions from various sources. During construction of the proposed Project, GHGs would be emitted through the operation of construction equipment and from worker and builder supply vendor vehicles, each of which typically uses fossil-based fuels to operate. The combustion of fossil-based fuels creates GHGs such as CO₂, CH₄, and N₂O. Furthermore, CH₄ is emitted during the fueling of heavy equipment. Exhaust emissions from on-site construction activities would vary daily as construction activity levels change.

The SCAQMD does not have an adopted threshold of significance for construction-related GHG emissions. However, lead agencies are required to quantify and disclose GHG emissions that would occur during construction. The SCAQMD then requires the construction GHG emissions to be amortized over the life of the Project (defined as 30 years), added to the operational emissions, and compared to the applicable interim GHG significance threshold tier.

Construction activities produce combustion emissions from various sources, such as site grading, utility engines, on-site heavy-duty construction vehicles, equipment hauling materials to and from the site, asphalt paving, and motor vehicles transporting the construction crew. Exhaust emissions from on-site construction activities would vary daily as construction activity levels change. The construction GHG emission estimates are shown in Table 4.8.A.

Table 4.8.A: Construction Greenhouse Gas Emissions

Construction Phase	Greenhouse Gas Emissions, CO ₂ e (Metric Tons)
Demolition 2021	2.85
Site Preparation 2021	4.55
Grading 2021	15.49
Building Construction 2021	75.32
Building Construction 2022	11.56
Paving 2022	8.34
Architectural Coating 2022	0.69
Intertie Trenching	18.95
Demolition 2022	11.38
Total Project Emissions	149.14
Total Construction Emissions Amortized over 30 years	4.97

Source: Compiled by LSA Associates, Inc. (December 2020).

Note: Numbers may appear to sum incorrectly due to rounding.

CO₂e = carbon dioxide equivalent

As indicated in Table 4.8.A, Project construction would result in total emissions of 149.14 MT CO₂e, which would be amortized to 4.97 MT CO₂e per year over the 30-year life of the project.

Operational Emissions. Long-term operation of the Project would generate GHG emissions from mobile, area, and water sources as well as indirect emissions from sources associated with energy consumption. Mobile-source GHG emissions would include Project-generated vehicle trips. Area-source emissions would be associated with activities such as landscaping, routine maintenance, and occasional running of the emergency generator. Energy source emissions would be generated by

off-site utility providers as the demand for electricity remains reliable to ensure continuous water supply to IRWD. In addition, water source emissions associated with the proposed Project are generated by water supply and conveyance, water treatment, and water distribution. GHG emissions associated with the proposed Project were estimated using the latest version of CalEEMod. Model output sheets are included in Appendix A.

Once operational, the proposed Project would generate minimal long-term regional GHG emissions associated with the limited vehicular traffic and other minimal sources. The on-site emissions generated by the Project would be a result of maintenance and the occasional testing of the emergency standby generator. The proposed Project would result in an increase of 30.57 MT CO₂e per year, which is below the SCAQMD's annual threshold of 3,000 MT CO₂e. Therefore, the project would not generate substantial GHG emissions, either directly or indirectly, that may have a significant impact on the environment. This impact would be less than significant and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

b) Would the Project conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

The California Climate Action Team and CARB have developed several reports to achieve the State's GHG targets that rely on voluntary actions of California businesses, local government and community groups, and State incentive and regulatory programs. The CARB released the First Update to the Climate Change Scoping Plan. The report identifies strategies to reduce California's emissions to the levels proposed in EO S-3-05 and AB 32. The CARB released a second update to the Scoping Plan, the 2017 Scoping Plan, to reflect the target of 40 percent below 1990 levels by 2030, as set by EO B-30-15 and codified by SB 32.

The adopted Scoping Plan includes proposed GHG reductions from direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, and market-based mechanisms such as cap-and-trade systems.

The City of Lake Forest City Council adopted the 2040 General Plan¹ in June of 2020. The General Plan addresses the City's blueprints for growth and improvements such as traffic patterns, housing, and resource conservation. Air quality and GHGs are addressed in the Resource Conservation Element, including the adopted policies for reduction of carbon emissions, and transportation reduction for improved air quality and decreasing GHG emissions. The 2040 General Plan outlines the goals and policies set forth to reduce GHGs in accordance with statewide targets. The goals include reducing the citywide vehicle miles traveled per capita through improved planning, transportation networks, and infrastructure design. Planning would coordinate efforts with the SCAQMD, SCAG, and CARB to meet local and regional air quality standards and ensure attainment of established goals.

¹ City of Lake Forest. 2020a. City of Lake Forest 2040 General Plan. June.

The proposed Project would be consistent with the City's 2040 General Plan measures implemented to enhance energy efficiency of the new Zone B to C Pump Station, which in turn would reduce GHG emissions. Using methods to decrease future energy dependency, the Project is consistent with the goals and policies contained in the 2040 General Plan. The methods and equipment being implemented meet and exceed the AB 32 reduction goals, aligning with IRWD's plan for energy efficiency and sustainability. Similarly, the proposed Project supports the GHG reduction goals of SB 32, EO S-3-05, and EO B-30-15. The proposed Project would not conflict with any applicable plans, policies, or regulations adopted for the purpose of reducing GHG emissions. Therefore, the Project would result in a less than significant impact.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

4.9 HAZARDS AND HAZARDOUS MATERIALS

<i>Would the project:</i>		Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b)	Create a significant hazard to the public or the environment through reasonable foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c)	Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d)	Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

4.9.1 Impact Analysis

a) Would the Project create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials?

Hazardous materials are chemicals that could potentially cause harm during an accidental release or mishap and are defined as being toxic, corrosive, flammable, reactive, and irritant, or a strong sensitizer.¹ Hazardous substances include all chemicals regulated under the United States Department of Transportation (USDOT) “hazardous materials” regulations and the EPA “hazardous waste” regulations. Hazardous wastes require special handling and disposal because of their potential to damage public health and the environment. The probable frequency and severity of consequences from the routine transport, use, or disposal of hazardous materials is affected by the type of substance, the quantity used or managed, and the nature of the activities and operations.

Construction activities associated with the proposed Project would use a limited amount of hazardous and flammable substances (e.g., oils) during heavy equipment operation for site

¹ A “sensitizer” is a chemical that can cause a substantial proportion of people or animals to develop an allergic reaction in normal tissue after repeated exposure to a chemical.

excavation and construction. Potentially hazardous substances such as chemical agents, solvents, and paints would also be used during construction. However, the amount of hazardous chemicals present during construction is limited and would be in compliance with existing government regulations. In addition, the potential for the release of hazardous materials during Project construction is low. Even if a release would occur, it would not result in a significant hazard to the public, surrounding land uses, or environment due to the small quantities of these materials associated with construction vehicles; therefore, no mitigation is required.

The proposed Project includes the operation and maintenance of a pump station, the removal of the existing pump station, and the installation of a proposed intertie. Operation of the proposed pump station would include the use of common hazardous materials including, but not limited to, lubricants and cooling fluids. Therefore, in addition to maintenance and custodial supplies, Project operation may include the routine use of hazardous materials typical of pump stations that, when used correctly and in compliance with existing laws and regulations, would not result in significant hazards to workers in the vicinity of the proposed Project. Use of hazardous materials by businesses is regulated by California Certified Unified Program Agency (CUPA) programs (California Health and Safety Code Chapter 6.11). CUPA programs include Hazardous Materials Business Plan (HMBP) requirements, hazardous waste generator requirements, underground and aboveground storage tank requirements, and the California Accidental Release Prevention (CalARP) Program. These existing programs would ensure protection of human health and the environment during operation of the proposed Project. Impacts would be less than significant, and no mitigation is required.

Therefore, impacts associated with the disposal of hazardous materials and/or the potential release of hazardous materials that could occur with the implementation of the proposed Project are considered less than significant, and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

b) Would the Project create a significant hazard to the public or the environment through reasonable foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

As previously stated in Response 4.9 (a), construction activities would involve the use of chemical agents, oils, solvents, paints, and other hazardous materials that are associated with construction activities. The amount of these chemicals present during construction is limited and would be in compliance with existing government regulations. Therefore, construction activities would not create a significant hazard to the public or the environment through reasonable foreseeable upset and accident conditions involving the release of hazardous materials into the environment. No mitigation is required.

The proposed Project would consist of a pump station that would be housed within a secured structure that would be operated from a remote location. Operation of the pump station would include the use of common hazardous material including, but not limited to, lubricants and cooling fluids. Therefore, in addition to maintenance and custodial supplies, Project operation may include the routine use of hazardous materials typical of pump stations that, when used correctly and in

compliance with existing laws and regulations, would not result in a significant hazard to the public or environment through upset or accidental release of hazardous materials into the environment. Use of hazardous materials by businesses is regulated by CUPA programs, which include HMBP requirements, hazardous waste generator requirements, underground and aboveground storage tank requirements, and CalARP. These existing programs would ensure protection of human health and the environment during operation of the proposed Project. Impacts would be less than significant, and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

c) Would the Project emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

The closest school to the Project site is New Thought Montessori Preschool, which is located approximately 0.3 mi southwest of the proposed pump station. There are no proposed schools within 0.25 mi of the Project site. Due to the nature of the Project as a pump station, the Project is not of the type to emit hazardous emissions or handle hazardous or acutely hazardous materials or substances, as described above in Responses 4.9(a) and 4.9(b). Furthermore, because there are no existing or proposed schools within 0.25 mi of the Project site, there would be no significant impact, and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

d) Would the Project be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

A search of available environmental records documenting hazardous materials sites compiled pursuant to Government Code Section 65962.5 for the Project site and properties up to 1.0 mi away from the Project site was conducted on December 10, 2020 using the Environmental Data Resources, Inc. (EDR) Radius Map Report¹ (Appendix E). According to the EDR report, several properties surrounding the Project site are listed in various environmental databases. Within 0.21 mi of the Project site, the EDR Report identified one Resource Conservation and Recovery Act (RCRA) Large Quantity Generator (LQG) site. Within 0.25 mi of the Project site, the EDR Report identified two RCRA Small Quantity Generator (SQG) sites, four underground storage tank (UST) sites, 10 California Environmental Reporting System (CERS) Hazardous Waste sites, 3 Statewide Environmental Evaluation and Planning System (SWEEPS) UST sites, 2 CERS Tanks sites, 1 California Facility Inventory Database (FID) UST site, 11 RCRA non-generator (NonGen/NLR) sites, and 2 drycleaner sites. Within 0.5 mi of the Project site, the EDR Report identified four Leaking Underground Storage Tank (LUST) sites, 3 Cortese Sites, and one Hazardous Waste and Substance Sites List (HIST CORTESE) site.

¹ Environmental Data Resources, Inc. (EDR). 2020. EDR Radius Map Report with Geocheck for Lake Forest Zone B to C Pump Station. December 10.

Although there are hazardous waste sites listed within the surrounding vicinity of the proposed Project, the Project site is not included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5. Since the Project would not be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and would not create a significant hazard to the public or the environment, impacts would be less than significant and no mitigation is required.

Significance Determination: Less Than Significant Impact
Mitigation Measures: No mitigation is required.

e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

The proposed Project is not located within an airport land use plan or within 2 mi of a public airport or public use airport. The nearest public airport is the John Wayne Airport at 18601 Airport Way, which is located approximately 11.5 mi northwest of the Project site. As a result, impacts associated with safety hazards or noise for people working in a project area that is less than 2 mi from a public airport would be less than significant. No mitigation would be required.

Significance Determination: No Impact
Mitigation Measures: No mitigation is required.

f) Would the Project impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

The Orange County Fire Authority (OCFA) is responsible for providing fire protection and suppression, inspection services, paramedic emergency medical services, and hazardous material response to citizens and visitors to Lake Forest. Roads used as response corridors/evacuation routes usually follow the most direct path to or from various parts of a community. For the Project site and the surrounding areas, the main corridors anticipated to be used by emergency services providers are Lake Forest Drive, SR-241, Portola Parkway, Regency Lane, Santa Margarita Parkway, and other arterials and freeways in this part of Lake Forest.

Construction. The proposed Project would require temporary lane and sidewalk closures on Portola Parkway to allow construction of the intertie. Temporary lane closures would be implemented consistent with the recommendations of the current California Temporary Traffic Control Handbook (CATTCH) (previously known as the California Joint Utility Traffic Control Manual). The CATTCH provides basic standards for the safe movement of all road users (including emergency responders) through construction zones in accordance with Section 21400 of the California Vehicle Code and the California Manual on Uniform Traffic Control Devices. Mitigation Measure TRA-1 requires that the preparation of a Construction Traffic Management Plan (CTMP) based on the recommendations of the CATTCH. The CTMP would further ensure that the proposed Project would not inhibit emergency response plan or an emergency evacuation plan. Adherence to applicable emergency access codes and ordinances and Mitigation Measure TRA-1 would ensure that construction and operation of the proposed Project would not impair implementation of or physically interfere with

an adopted emergency response plan or emergency evacuation plan. With incorporation of Mitigation Measure TRA-1, the Project would have a less than significant impact.

Operation. As described in Section 2.7.2, access to the Project site would not change as part of the proposed Project. Access to the new pump station is provided via Lake Forest Drive. Site access for the existing pump station is controlled by a gate located on the access road near its intersection with Regency Lane, and site access for the proposed intertie is provided via Portola Parkway. Since the Project would not change the existing configuration of the Project site, emergency access to the site would not be affected. The proposed Project would be required to comply with all applicable codes and ordinances for emergency vehicle access, which would ensure adequate access to, from, and on site for emergency vehicles. Further, the proposed Project would not reconfigure any existing roadways, result in road closures during operation of the Project, or include features that would otherwise hinder emergency response or evacuation. Therefore, operation of the proposed Project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. Potential Project impacts would be less than significant, and no mitigation would be required.

Significance Determination: Less Than Significant with Mitigation Incorporated

Mitigation Measures: Refer to Mitigation Measure TRA-1.

g) Would the Project expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

According to the Lake Forest Very High Fire Hazard Severity Zones (VHFHSZs) in the Local Responsibility Area (LRA)¹ map, the Project site is located within a non-VHFHSZ LRA.² The proposed Project includes the construction of one building for the proposed pump station. Additionally, operation of the proposed Project would be conducted remotely. Project construction and operation would not change the characteristics of the Project site in a way that would make the Project site more susceptible to wildland fires. Therefore, the proposed Project would not expose people or structures to a significant risk of loss, injury, or death involving wildland fires. No mitigation is required.

Significance Determination: No Impact

Mitigation Measures: No mitigation is required.

¹ An LRA is defined as land on which neither the state nor the federal government has the legal responsibility of providing fire protection.

4.10.1 Impact Analysis

a) Would the Project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality or otherwise substantially degrade surface or ground water quality?

Pollutants of concern during construction include sediments, trash, petroleum products, concrete waste (dry and wet), sanitary waste, and chemicals. Each of these pollutants on its own or in combination with other pollutants can have a detrimental effect on water quality. During construction activities, excavated soil would be exposed, and there would be an increased potential for soil erosion and sedimentation compared to existing conditions. In addition, chemicals, liquid products, petroleum products (for example, paints, solvents, and fuels), and concrete-related waste may be spilled or leaked and have the potential to be transported via storm runoff into receiving waters. As stated in the Preliminary Design Report (PDR),¹ because construction of the Project would disturb less than 1 ac of soil, the Project is not subject to the requirements of the SWRCB

¹ Stantec. 2020. Lake Forest Zone B to C Recycled Water Pump Station Preliminary Design Report (PDR). November 23.

(Construction General Permit). Because of the small amount of ground disturbance during construction, Project construction activities have a low potential to impact water quality. Therefore, Project construction would not violate any water quality standards or waste discharge requirements or substantially degrade surface water quality.

According to the Draft Geotechnical Study¹ prepared for the project, two exploratory borings were drilled to depths of 51.5 ft and 47 ft bgs at the proposed pump station site. Groundwater was encountered during the drilling of both borings, at 40 ft and 46.5 ft bgs, respectively. However, based on the maximum depth of excavation for the proposed pump station at 3 ft bgs, it is not anticipated that the groundwater table would be encountered at the proposed pump station site. Additionally, although excavation for the proposed intertie would extend to 6 ft bgs, the proposed intertie is not located within a designated groundwater basin. No excavation is proposed at the site for the removal of the existing pump station. Furthermore, based on the depth of groundwater and depths of excavation, it is unlikely that groundwater would be encountered during excavation activities, and groundwater dewatering would not be required during construction. Therefore, construction activities do not have the potential to directly impact groundwater quality.

Infiltration of storm water can have the potential to affect groundwater quality in areas of shallow groundwater. As discussed above, groundwater was encountered during exploratory borings at depths of 40 ft and 46.5 ft bgs. Pollutants in storm water are generally removed by soil through absorption as water infiltrates. Therefore, in areas of deep groundwater, there is more absorption potential and, as a result, less potential for pollutants to reach groundwater. Therefore, due to the depth to groundwater, it is not expected that any storm water that may infiltrate during construction or operation would affect groundwater quality because there is not a direct path for pollutants to reach groundwater.

The proposed pump station and the existing pump station (to be removed) are located within the jurisdiction of the Santa Ana Regional Water Quality Control Board (RWQCB). The proposed intertie is located within the jurisdiction of the San Diego RWQCB. During operation, pollutants of concern would be limited to those associated with vehicle operation (e.g., oil and grease). Pollutants from vehicles accessing the Project site would be minimal because of the limited traffic to and from the site. The Project would increase impervious surface area on the proposed pump station site by approximately 0.33 ac (14,375 square feet [sf]), which would increase the volume of runoff during a storm, and more effectively transport pollutants to receiving waters. Based on modeling results completed for IRWD, storm water runoff from the proposed pump station that is equivalent to 10-year storm flows will be captured on site and discharged to IRWD's sanitary sewer system. For 25-year and 100-year storm events, storm water runoff will drain from the proposed pump station site to the existing curb and gutter on Lake Forest Drive via overland flow, and will discharge to the City's existing storm drain system. Because the proposed Project is a significant redevelopment project that creates 5,000 sf or more of impervious surface, the proposed Project would comply with the requirements of the North Orange County Municipal Separate Storm Sewer System (MS4) Permit. The design of the proposed Project shall include Source Control and Low Impact Development (LID) Best Management Practices (BMPs) that would capture and retain storm water and target and remove pollutants of concern to reduce impacts to water quality during operation of the Project. In

¹ Kleinfelder. 2020. Draft Geotechnical Study. April 15.

compliance with the North Orange County MS4 Permit and implementation of BMPs, the proposed Project would not violate any water quality standards or waste discharge requirements or substantially degrade surface water quality during operation. Therefore, construction and operational impacts related to violation of water quality standards or waste discharge requirements would be less than significant, and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

b) Would the Project substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

As discussed above in Response 4.10(a), groundwater was encountered during exploratory borings at depths of 40 ft and 46.5 ft bgs. Based on the depth of groundwater and depth of excavation, excavation activities are unlikely to encounter groundwater during construction. The Project would increase the total amount of impervious surface area on site by approximately 0.33 ac, which could result in a minimal decrease in on-site infiltration. However, due to the depth to groundwater, it is unlikely that groundwater recharge from storm water infiltration currently occurs on the Project site. Regardless, any decrease in infiltration at the proposed pump station site would be minimal in comparison to the size of the Coastal Plain of Orange County Groundwater Basin, which underlies the proposed pump station site and has a storage capacity of 38,000,000 acre-feet.¹ As the proposed intertie is not located within a designated groundwater basin and is not located on land designated for groundwater recharge, the proposed intertie would not substantially decrease groundwater supplies or interfere with groundwater recharge. Additionally, because no excavation would occur at the site for the removal of the existing pump station, the decommissioning of the existing pump station does not have the potential to affect groundwater supplies or interfere with groundwater recharge. Furthermore, Project operation would not include groundwater extraction. For these reasons, a less than significant impact related to depletion of groundwater supplies or interference with groundwater recharge during project operation would occur, and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required

c) Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

i) Result in substantial erosion or siltation on- or off-site?

During construction activities, soil would be exposed and disturbed, drainage patterns would be temporarily altered during grading and other construction activities, and there could be an

¹ California Department of Water Resources (DWR). 2004. Bulletin 118, Coastal Plain of Orange County Groundwater Basin. February 27.

increased potential for soil erosion and siltation compared to existing conditions. Additionally, during a storm event, soil erosion and siltation may occur at an accelerated rate. However, as discussed above in Response 4.10(a), because of the small amount of ground disturbance during construction, Project construction activities have a low potential to result in substantial erosion or siltation that would negatively impact water quality. Therefore, construction impacts related to on- or off-site erosion or siltation would be less than significant, and no mitigation is required.

During operation, the proposed Project would generally maintain the existing drainage pattern on the Project site. As discussed in Response 4.10(a), the proposed Project would slightly increase the total impervious surface area on the Project site by approximately 0.33 ac, which would increase on-site storm water flows. Increases in on-site runoff could lead to downstream erosion. However, as discussed in Response 4.10(a), BMPs will be implemented in compliance with the North Orange County MS4 Permit. These BMPs will be designed to capture storm water runoff to reduce runoff volume and velocity for the 25-year and 100-year storm events in compliance with the requirements of the North Orange County MS4 Permit. Additionally, although the proposed Project would increase impervious surface area, impervious surface areas associated with the development of the Project site are not prone to erosion or siltation, because no loose soil would be included in these areas. Therefore, because the proposed Project would not substantially change the storm water runoff from the Project site, the proposed Project would not contribute to downstream erosion or siltation. As such, operational impacts related to on-site or off-site erosion or siltation would be less than significant, and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

ii) Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?

During construction activities, soil would be compacted and drainage patterns would be temporarily altered during grading and other construction activities. However, because of the small amount of ground disturbance during construction, any increase in flooding resulting from the drainage alterations would be minimal. In addition, construction activities would be temporary, and much of the disturbed ground would be restored during operation. Therefore, construction impacts related to on- or off-site flooding would be less than significant, and no mitigation is required.

Although the proposed Project would increase the amount of impervious surface at the Project site by approximately 0.33 ac, the proposed Project would not substantially alter the existing on-site drainage patterns. However, the increase in impervious surface area would slightly increase storm water runoff compared to existing conditions. As discussed in Response 4.10 (c)(i), the proposed Project would include BMPs to capture storm water runoff to reduce runoff volume and velocity for the 25-year and 100-year storm events. Therefore, the proposed Project would not exceed the capacity of the downstream storm drain system or result in off-site flooding. In addition, BMPs and on-site storm drain facilities included in the design of the proposed Project would be sized to accommodate storm water runoff from the Project site so that on-site flooding would not occur.

Therefore, the addition of 0.33 ac of impervious surfaces at the Project site would not result in on- or off-site flooding. As such, operational impacts related to on- or off-site flooding would be less than significant, and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

iii) Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would create or contribute runoff water which would exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff?

As discussed previously, construction of the proposed Project has the potential to introduce pollutants to the storm drainage system from erosion, siltation, and accidental spills. However, as discussed above in Response 4.10(a), because of the small amount of ground disturbance during construction, Project construction activities have a low potential to impact water quality and would not result in a substantial increase in the rate or amount of storm water runoff. Therefore, Project construction would not exceed the capacity of existing or planned storm water drainage systems or provide substantial additional sources of polluted runoff.

As discussed previously, the proposed Project would generally maintain the existing drainage pattern on the Project site during operation. In addition, the proposed Project would increase the impervious surface area compared to existing conditions that would increase the volume of storm water runoff and more effectively transport pollutants to receiving waters. However, as described in Response 4.10(c)(ii) above, the proposed Project would increase the impervious surface area compared to existing conditions, which would increase the volume of storm water runoff and more effectively transport pollutants to receiving waters. However, the proposed Project would include BMPs to target and remove pollutants of concern and capture storm water runoff to reduce runoff volume and velocity for the 25-year and 100-year storm events. Further, the proposed Project would not exceed the capacity of existing or planned sewer systems for the 10-year storm event. Storm water runoff discharged to the sanitary sewer system would ultimately be conveyed and treated at IRWD's Los Alisos Water Recycling Plant. Additionally, the project would result in minimal new source pollutants in storm water runoff (e.g., limited to pollutants from vehicles accessing the Project site for routine maintenance and to periodically check on facilities). Therefore, Project operation would not substantially increase the amount of pollutants transported by storm water runoff to receiving waters. Therefore, impacts related to the creation or contribution of storm water runoff that would exceed the capacity of existing or planned storm water drainage systems or the provision of substantial additional sources of polluted runoff would be less than significant and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

- iv) Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would impede or redirect flood flows?*

According to Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Nos. 06059C0316J and 06059c0317J, the Project site is located within Zone X, Area of Minimal Flood Hazard. Because the Project would not place improvements or structures directly within a 100-year floodplain, the project would not impede or redirect flood flows. Therefore, no impact would occur related to impeding or redirecting of flood flows, and no mitigation is required.

Significance Determination: No Impact

Mitigation Measures: No mitigation is required.

- d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?*

As discussed in Response 4.10(c)(iv), the Project site is located within Zone X, Area of Minimal Flood Hazard. Additionally, the Project site is not within a direct dam inundation zone.¹ Therefore, the Project site is not subject to inundation from flooding, and there is no risk of release of pollutants due to inundation from flooding. No mitigation is required.

Tsunamis are generated ocean wave trains generally caused by tectonic displacement of the seafloor associated with shallow earthquakes, seafloor landslides, rockfalls, and exploding volcanic islands. The Project site is located approximately 11 mi from the ocean shoreline. In addition, according to the Tsunami Inundation Map for Emergency Planning, the Project site is not in a tsunami inundation area. Therefore, there is no risk of release of pollutants due to a tsunami. No mitigation is required.

Seiching occurs when seismic ground shaking induces standing waves (seiches) inside water retention facilities (e.g., reservoirs and lakes). Such waves can cause retention structures to fail and flood downstream properties. The existing pump station (to be removed) is located near the IRWD Zone B East Reservoir; however, the pump station is being removed as part of the proposed Project and no impacts would occur should the site be flooded. In addition, although the Upper Oso Reservoir is located approximately 1.2 mi east of the proposed intertie, the Project site is not within the inundation pathway of the Upper Oso Reservoir. As stated in Section 4.9, Hazards and Hazardous Materials, potentially hazardous substances such as chemical agents, solvents, and paints would be used during construction. Operation of the pump station would include the use of common hazardous materials including, but not limited to, lubricants and cooling fluids. Potentially hazardous materials from routine project maintenance may also be used during operation of the proposed Project. However, the amount of these chemicals present during Project construction and operation would be limited and would be in compliance with existing government regulations. Therefore, in the unlikely event of inundation from a seiche, the proposed Project would not

¹ California Department of Water Resources, Division of Safety of Dams. 2020. California Dam Breach Inundation Maps. Website: https://fmds.water.ca.gov/webgis/?appid=dam_prototype_v2 (accessed December 10, 2020).

substantially increase the risk of release of pollutants due to inundation from seiche, and impacts would be less than significant. No mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

The Project is within the jurisdiction of the Santa Ana RWQCB and the San Diego RWQCB. The Santa Ana RWQCB adopted a Water Quality Control Plan (i.e., Basin Plan) (January 1995, with amendments effective on or before February 2016) and the San Diego RWQCB adopted a Water Quality Control Plan (i.e., Basin Plan) (September 1994, with amendments effective on or before May 2016) that designates beneficial uses for all surface and groundwater within their jurisdiction and establishes the water quality objectives and standards necessary to protect those beneficial uses. As discussed in Response 4.10(a), because of the small amount of ground disturbance during construction, project construction has a low potential to impact water quality. Because the Project would only slightly increase the total impervious surface area on the Project site, storm water runoff during operation would remain similar to existing conditions. Additionally, the design of the proposed Project would include Source Control and LID BMPs to capture and retain storm water and target and remove pollutants of concern to reduce impacts to water quality during operation of the Project. As such, the proposed Project would not result in water quality impacts that would conflict with the Basin Plan. Impacts conflicting with a Water Quality Control Plan would be less than significant and no mitigation is required.

The Sustainable Groundwater Management Act (SGMA) was enacted in September 2014. The SGMA requires governments and water agencies of high- and medium-priority basins to halt overdraft of groundwater basins. Specifically, SGMA requires the formation of local Groundwater Sustainability Agencies (GSAs), which are required to adopt Groundwater Sustainability Plans (GSPs), or an approved alternative to a GSP, to manage the sustainability of groundwater basins in California. The Project site is located within the Coastal Plain of the Orange County Groundwater Basin, which is managed by the Orange County Water District (OCWD). The Coastal Plain is identified by the Department of Water Resources as a medium-priority basin;¹ therefore, development of a GSP or an approved GSP alternative is required. In lieu of a GSP, OCWD, IRWD, and the City of La Habra developed the Basin 8-1 Alternative, which establishes objectives and criteria for groundwater management within the Coastal Plain of the Orange County Groundwater Basin, and is designed to be functionally equivalent to a GSP.² As described in Responses 4.10(a) and 4.10(b), due to the depth to groundwater and depth of excavation at the proposed pump station site, it is unlikely groundwater would be encountered during construction, and it is not expected that any storm water that may infiltrate during construction or operation would affect groundwater quality because there is not a direct path for pollutants to reach groundwater. Furthermore, any decrease in

¹ California Department of Water Resources (DWR). 2020. SGMA Basin Prioritization Dashboard, Groundwater Basins. Website: <https://gis.water.ca.gov/app/bp-dashboard/p2/> (accessed December 10, 2020).

² Orange County Water District. 2017. *Basin 8-1 Alternative*. January 1.

infiltration at the proposed pump station site would be minimal in comparison to the size of the Coastal Plain of Orange County Groundwater Basin. Additionally, because no excavation is proposed at the site for the removal of the existing pump station and the proposed intertie is not located within a designated groundwater basin, the removal of the existing pump station and proposed intertie would not affect groundwater quality. Therefore, the project would not conflict with or obstruct the implementation of the Basin 8-1 Alternative, which is functionally equivalent to a sustainable groundwater management plan, and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

4.11 LAND USE AND PLANNING

<i>Would the project:</i>		Less Than Significant			
		Potentially Significant Impact	With Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b)	Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

4.11.1 Impact Analysis

a) *Would the Project physically divide an established community?*

The proposed pump station site and site of the existing pump station (to be removed) are located within areas owned and operated by IRWD. In general, the proposed pump station and existing pump station (to be removed) are surrounded by existing commercial development and open space use. The proposed intertie would be located underground, and therefore would not divide an established community. Given the existing urbanized setting, the proposed Project would not physically divide an established community, and no impact would occur. No mitigation is required.

Significance Determination: No Impact

Mitigation Measures: No mitigation is required.

b) *Would the Project cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?*

The proposed pump station site is zoned General Business (C2) District. The existing pump station (to be removed) is zoned Open Space, and the proposed intertie is zoned Community Commercial (CC) District. Water facilities are not subject to city zoning regulations per Government Code 53091. The proposed Project does not propose changes to the land use or zoning designations of the site and would not require any variances. Therefore, the Project would not conflict with any applicable land use plan, policy, or regulation and no impact would occur.

Significance Determination: No Impact

Mitigation Measures: No mitigation is required.

4.12 MINERAL RESOURCES

<i>Would the project:</i>		Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b)	Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

4.12.1 Impact Analysis

a) *Would the Project result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?*

In 1975, the California Legislature enacted the Surface Mining and Reclamation Act (SMARA), which, among other things, provided guidelines for the classification and designation of mineral lands. Areas are classified on the basis of geologic factors without regard to existing land use and land ownership. The areas are categorized into four Mineral Resource Zones (MRZs):

- **MRZ-1:** An area where adequate information indicates that no significant mineral deposits are present, or where it is judged that little likelihood exists for their presence.
- **MRZ-2:** An area where adequate information indicates that significant mineral deposits are present, or where it is judged that a high likelihood exists for their presence.
- **MRZ-3:** An area containing mineral deposits, the significance of which cannot be evaluated.
- **MRZ-4:** An area where available information is inadequate for assignment to any other MRZ.

Of the four categories, lands classified as MRZ-2 are of the greatest importance. Such areas are underlain by demonstrated mineral resources or are located where geologic data indicate that significant measured or indicated resources are present. MRZ-2 areas are designated by the Mining and Geology Board as being “regionally significant”. Such designations require that a Lead Agency’s land use decisions involving designated areas be made in accordance with its mineral resource management policies and that it consider the importance of the mineral resource to the region or the State as a whole, not just to the Lead Agency’s jurisdiction.

According to California Department of Conservation, Division of Mines and Geology, the proposed pump station site, the existing pump station (to be removed), and the proposed intertie site are located within MRZ-3 (areas containing mineral deposits of undetermined significance).¹ Implementation of the proposed Project would not result in the loss of availability of known mineral

¹ California Department of Conservation, Division of Mines and Geology. 1995. Generalized Mineral Land Classification of Orange County, California.

resources or a locally important mineral resource recovery site. No impact would occur, and no mitigation is required.

Significance Determination: No Impact

Mitigation Measures: No mitigation is required.

b) Would the Project result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

As stated in Response 4.12(a), no known valuable mineral resources exist on or near the Project site. In addition, the Project site is not identified on a local General Plan, Specific Plan, or other land use plan as a location of a locally important mineral resource. The proposed Project would not result in the loss of a locally important mineral resource recovery site. Therefore, no significant impacts related to mineral resources would result from Project implementation, and no mitigation is required.

Significance Determination: No Impact

Mitigation Measures: No mitigation is required.

4.13 NOISE

<i>Would the project result in:</i>		Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less than Significant Impact	No Impact
a)	Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b)	Generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c)	For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

4.13.1 Technical Background

The discussion and analysis provided in this section describes the potential short-term construction noise and vibration impacts associated with the proposed Project, as well as long-term operational noise impacts.

The following provides an overview of the characteristics of sound and vibration as well as the regulatory framework that applies to noise and vibration in the vicinity of the Project site.

Characteristics of Sound. Noise is usually defined as unwanted sound. Noise consists of any sound that may produce physiological or psychological damage and/or interfere with communication, work, rest, recreation, or sleep.

Several noise measurement scales exist that are used to describe noise in a particular location. A decibel is a unit of measurement that indicates the relative intensity of a sound. Sound levels in decibels are calculated on a logarithmic basis. An increase of 10 decibels (dB) represents a tenfold increase in acoustic energy, while 20 dB is 100 times more intense, and 30 dB is 1,000 times more intense. Each 10 dB increase in sound level is perceived as approximately a doubling of loudness; similarly, each 10 dB decrease in sound level is perceived as half as loud.

A-weighted decibels (dBA) are an expression of the relative loudness of sounds in air as perceived by the human ear. That is, an A-weighted noise level de-emphasizes low and very high frequencies of sound similar to the human ear’s de-emphasis of these frequencies. Unlike linear units (e.g., inches or pounds), decibels are measured on a logarithmic scale representing points on a sharply rising curve.

As noise spreads from a source, it loses energy; therefore, the farther away the noise receiver is from the noise source, the lower the perceived noise level would be. Geometric spreading causes

the sound level to attenuate or be reduced, resulting in a 6 dB reduction in the noise level for each doubling of distance from a single point source of noise to the noise-sensitive receptor of concern.

There are many ways to rate noise for various time periods, but an appropriate rating of ambient noise affecting humans also accounts for the annoying effects of sound. The equivalent continuous sound level (L_{eq}) is the total sound energy of time-varying noise over a sample period. However, the predominant rating scales for human communities in the State of California are the L_{eq} , the Community Noise Equivalent Level (CNEL), and the day-night average level (L_{dn}) based on A-weighted decibels. CNEL is the time-varying noise over a 24-hour period, with a 5 dBA weighting factor applied to the hourly L_{eq} for noise occurring from 7:00 p.m. to 10:00 p.m. (defined as relaxation hours) and a 10 dBA weighting factor applied to noise occurring from 10:00 p.m. to 7:00 a.m. (defined as sleeping hours). L_{dn} is similar to the CNEL scale, but without the adjustment for events occurring during the evening relaxation hours. CNEL and L_{dn} are within 1 dBA of each other and are normally interchangeable. The City uses the CNEL noise scale for long-term noise impact assessment.

Characteristics of Vibration. Vibration refers to ground-borne noise and perceptible motion. Ground-borne vibration is almost exclusively a concern inside buildings and is rarely perceived as a problem where the motion may be discernible, but there is less adverse reaction without the effects associated with the shaking of a building. Vibration energy propagates from a source through intervening soil and rock layers to the foundations of nearby buildings. The vibration then propagates from the foundation throughout the remainder of the structure. Building vibration may be perceived by occupants as motion of building surfaces, the rattling of items on shelves or hanging on walls, or a low-frequency rumbling noise, otherwise referred to as ground-borne noise. Typically, sources that have the potential to generate ground-borne noise are likely to produce airborne noise impacts that mask the radiated ground-borne noise. The rumbling noise is caused by the vibrating walls, floors, and ceilings radiating sound waves. Annoyance from vibration often occurs when the vibration exceeds the threshold of perception by 10 dB or less. This is an order of magnitude below the damage threshold for normal buildings.

Typical sources of ground-borne vibration are construction activities (e.g., blasting, pile driving, and operating heavy-duty earthmoving equipment) and occasional traffic on rough roads. Problems with ground-borne vibration and noise from these sources are usually localized to areas within approximately 100 ft of the vibration source, although there are examples of ground-borne vibration causing interference out to distances greater than 200 ft. When roadways are smooth, vibration from traffic, even heavy trucks, is rarely perceptible. For most projects, it is assumed that the roadway surface will be smooth enough that ground-borne vibration from street traffic will not exceed the impact criteria; however, construction of the Project could result in ground-borne vibration that could be perceptible and annoying.

Ground-borne vibration has the potential to disturb people as well as damage buildings. Ground-borne vibration is usually measured in terms of vibration velocity, either the root-mean-square (RMS) velocity or peak particle velocity (PPV). RMS is best for characterizing human response to building vibration, and PPV is used to characterize the potential for damage. Decibel notation acts to compress the range of numbers required to describe vibration. Vibration velocity level in decibels is defined as:

$$L_v = 20 \log_{10} [V/V_{ref}]$$

where L_v is the velocity in decibels (VdB), “ V ” is the RMS velocity amplitude, and “ V_{ref} ” is the reference velocity amplitude, or 1×10^{-6} inches per second used in the United States.

Applicable Noise Standards. The City regulates noise based on the criteria presented in the Noise Element of the General Plan as well as the Municipal Code. As discussed below, the City does not have adopted construction noise thresholds; therefore, Federal Transit Administration (FTA) criteria will be used to assess potential construction noise impacts.

City of Lake Forest Noise Element of the General Plan. The noise standards specified on Table PS-1 of the City’s General Plan Noise Element are used as a guideline to evaluate the acceptability of the noise levels at sensitive uses. These standards are for the assessment of long-term vehicular traffic noise impacts. The City has exterior noise criteria for outdoor living areas associated with single-family and multifamily residential uses such that exterior active-use areas should not exceed 60 dBA CNEL. Additionally, the City has exterior noise criteria for office uses and parks such that exterior activity areas should not exceed 65 dBA CNEL and 70 dBA CNEL, respectively.

City of Lake Forest Municipal Code. Section 11.16.040, Exterior Noise Standards, of the Municipal Code identifies a maximum permissible exterior ambient noise level for residential uses of no greater than 55 dBA during daytime hours (7:00 a.m. to 10:00 p.m.) and no greater than 50 dBA during nighttime hours (10:00 p.m. to 7:00 a.m.).

In order to properly assess the impact of events at the exterior living area that occur for periods of time less than 30 minutes within a given hour, Section 11.16.040 B provides the following additions based on duration:

1. The noise standard for a cumulative period of more than 30 minutes in any hour; or
2. The noise standard plus 5 dBA for a cumulative period of more than 15 minutes in any hour; or
3. The noise standard plus 10 dBA for a cumulative period of more than 5 minutes in any hour; or
4. The noise standard plus 15 dBA for a cumulative period of more than 1 minute in any hour; or
5. The noise standard plus 20 dBA for any period of time.

If the ambient noise level exceeds any of the first four noise limit categories above, the cumulative period applicable to said category shall be increased to reflect that ambient noise level. If the ambient noise level exceeds the fifth noise limit category, the maximum allowable noise level under the fifth category shall be increased to reflect the maximum ambient noise level.

In order to properly assess the impact of events in the interior living area that occur for periods of less than 30 minutes within a given hour, Section 11.16.050 B provides the following additions based on duration:

1. The noise standard for a cumulative period of more than 5 minutes in any hour; or
2. The noise standard plus 5 dBA for a cumulative period of more than 1 minute in any hour; or
3. The noise standard plus 10 dBA for any period of time.

In the event the ambient noise level exceeds either of the first two noise limit categories above, the cumulative period applicable to said category shall be increased to reflect that ambient noise level. In the event the ambient noise level exceeds the third noise limit category, the maximum allowable noise level under the third category shall be increased to reflect the maximum ambient noise level.

In regard to the regulation of construction noise impacts, the City's Municipal Code, Section 11.16.060 Exemptions, states the following activities shall be exempted from the provisions of this chapter:

Part H. Noise sources associated with construction, repair, remodeling, or grading of any real property, provided said activities do not take place between the hours of 8:00 p.m. and 7:00 a.m. on weekdays, including Saturday, or at any time on Sunday or a legal City of Lake Forest holiday.

Because the City's Municipal Code does not establish construction noise thresholds, for the purposes of analyzing significance under CEQA, the FTA's criteria¹ are used. The general assessment criteria for construction noise identifies a 1-hour noise level of 90 dBA L_{eq} for residential uses during daytime hours and a 1-hour noise level of 100 dBA L_{eq} for commercial and industrial uses. This provides reasonable criteria for assessing construction noise impacts based on the potential for adverse community reaction when the noise criteria are exceeded.

Additionally, the City's Noise Element and Municipal Code do not provide specific noise level requirements or vibration impact criteria associated with construction activities; therefore, the FTA criteria will be used in this analysis.

Federal Transit Administration. The Lake Forest Municipal Code exempts construction activities, and no standard criteria for assessing construction noise impacts are provided by the City. Therefore, for purposes of determining the significance of the noise increase experienced at noise-sensitive uses surrounding the project, the guidelines and noise criteria in the FTA *Transit Noise and Vibration Impact Assessment Manual (2018)* (FTA Manual) described above are used in this analysis for construction noise impact identification. These guidelines provide reasonable criteria for assessing construction noise impacts based on the potential for adverse community reaction when the noise criteria are exceeded.

The vibration impact criteria included in Table 6-6 of the FTA Manual are used in this analysis for ground-borne vibration impacts on human annoyance, as shown in Table 4.13.A. The criteria account for the sensitivity of the uses which may be affected, specifically those uses which have sensitive equipment.

¹ Federal Transit Administration (FTA). 2018. *Transit Noise and Vibration Impact Assessment Manual*, FTA Report No. 0123. September.

Table 4.13.A: Human Response to Different Levels of Ground-Borne Noise and Vibration

Land Use Category	Maximum L _v (VdB)	Description of Use
Workshop	90 VdB	Vibration that is distinctly felt. Appropriate for workshops and similar areas not as sensitive to vibration.
Office	84 VdB	Vibration that can be felt. Appropriate for offices and similar areas not as sensitive to vibration.
Residential (Daytime)	78 VdB	Vibration that is barely felt. Adequate for computer equipment and low power optical microscopes (up to 20X).
Residential (Nighttime), Operating Rooms	72 VdB	Vibration is not felt, but ground-borne noise may be audible inside quiet rooms. Suitable for medium-power optical microscopes (100X) and other equipment of low sensitivity.

Source: *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018).

FTA = Federal Transit Administration

VdB = vibration velocity decibels

The criteria for potential building damage from ground-borne vibration and noise are based on the maximum levels for a single event. Table 4.13.B lists the potential vibration building damage criteria associated with construction activities, as suggested in the 2018 FTA Manual.¹ FTA guidelines show that a vibration level of up to 0.5 inches per second (in/sec) PPV² is considered safe for buildings consisting of reinforced concrete, steel, or timber (no plaster), and would not result in any construction vibration damage. For a non-engineered (those not designed by an engineer or architect) timber and masonry building, the construction building vibration damage criterion is 0.2 in/sec PPV.

Table 4.13.B: Construction Vibration Damage Criteria

Building Category	PPV (in/sec)
Reinforced concrete, steel, or timber (no plaster)	0.50
Engineered concrete and masonry (no plaster)	0.30
Non-engineered timber and masonry	0.20
Buildings extremely susceptible to vibration damage	0.12

Source: *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018).

FTA = Federal Transit Administration

in/sec = inches per second

PPV = peak particle velocity

Thresholds of Significance. A project would normally have a significant effect on the environment related to noise and vibration if it would substantially increase the ambient noise levels for adjoining areas or conflict with the adopted environmental plans and the goals of the community in which the

¹ Federal Transit Administration (FTA). 2018. *Transit Noise and Vibration Impact Assessment Manual*. FTA Report No. 0123. September.

² Ibid.

Project is located. The applicable noise standards governing this project site are the criteria in the City’s Noise Ordinance and the 2018 FTA Manual.¹

Existing Noise Environment. The Project site is surrounded by existing commercial use to the west, business park use to the east, a walking trail classified as regional park/open space to the north, and transportation corridor (Lake Forest Drive) use to the south. In order to assess the existing noise environment surrounding the Project site, a combination of long-term and short-term noise measurements were gathered around the perimeter of the Project site. LSA conducted two long-term 24-hour measurements from November 17, 2020 to November 18, 2020. The locations of the noise measurements are shown on Figure 4.13.1, with the results shown in Table 4.13.C. Noise monitoring sheets are included in Appendix F.

Table 4.13.C: Existing Noise Level Measurements

Location	Date	Daytime Noise Levels ¹ (dBA L _{eq})	Nighttime Noise Levels ² (dBA L _{eq})
LT-1: Located approximately 25 ft northwest of Lake Forest Drive, near the project driveway	11/17/20 to 11/18/20	62.6-68.2	55.5-65.9
LT-2: Located near northern corner of the project site	11/17/20 to 11/18/20	52.1-61.8	47.9-55.0

Source: Compiled by LSA Associates, Inc. (December 2020).

¹ Daytime Noise Levels were measured from 7:00 a.m. to 10:00 p.m.

² Nighttime Noise Levels were measured from 10:00 p.m. to 7:00 a.m.

dBA = A-weighted decibels

L_{eq} = equivalent continuous sound level

LT = long-term measurement

Sensitive Land Uses in the Project Vicinity. The proposed Project has three components identified as the Intertie site, the decommissioning of the existing Zone B Pump Station, and the proposed Zone B to C Pump Station. Sensitive receptors at each respective location were evaluated to identify the nearest sensitive receptors. The closest sensitive receptors are shown on Figure 4.13.1.

4.13.2 Impact Analysis

a) Would the Project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Noise impacts from the proposed Project would be associated with construction and operational stationary source noise. The proposed Project would consist of the construction and operation of a new recycled water pump station and supporting equipment, the decommissioning/removal of an existing pump station, as well as the development of a new intertie between the Upper Oso Reservoir and the Lake Forest Zone C distribution system.

Construction Noise Impacts. Examples of typical construction noise sources include demolition, site preparation, excavation, building construction, and paving. Construction-related noise levels would be higher than existing ambient noise levels in the Project area today, but would no longer occur once construction of the Project is completed.

Two types of potential short-term noise impacts could occur during construction of the proposed Project: (1) noise impacts related to construction crew commutes and the transportation of construction equipment and materials to the site; and (2) noise impacts associated with demolition, site preparation, grading, building construction, paving, and architectural coating on the Project site.

Construction crew commutes and the transport of construction equipment and materials to the Project site will result in a maximum of 31 trips per day during the phase with the highest construction activity, which would incrementally increase noise levels on access roads leading to the site. Although there would be a relatively high single-event noise exposure from heavy trucks, potentially causing intermittent noise nuisance (passing pickup trucks at 50 ft would generate up to a maximum of 75 dBA), the effect on longer-term (hourly or daily) ambient noise levels would be small (i.e., less than 0.1 dBA) given that the traffic volume increase on adjacent roadways is at most 31 trips. Therefore, construction-related impacts associated with worker commutes and equipment transport to the Project site would be less than significant.

The second type of potential short-term noise impact is related to noise generated during demolition, site preparation, grading/trenching, building construction, paving, and architectural coating. Construction is completed in discrete steps, each of which has its own mix of equipment and consequently its own noise characteristics. These various sequential phases would change the character of the noise generated on the site and therefore the noise levels surrounding the site as construction progresses. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of operation allow construction-related noise ranges to be categorized by work phase. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full-power operation followed by 3 or 4 minutes at lower power settings.

Once the composite reference maximum noise level is calculated for each phase, the usage factor provided in Table 4.13.D is utilized to calculate the hourly noise level impact for each piece of equipment based on the following equation:

$$L_{eq}(equip) = E.L. + 10 \log(U.F.) - 20 \log\left(\frac{D}{50}\right)$$

- where:
- $L_{eq}(equip)$ = L_{eq} at a receiver resulting from the operation of a single piece of equipment over a specified time period
 - E.L. = noise emission level of the particular piece of equipment at a reference distance of 50 ft
 - U.F. = usage factor that accounts for the fraction of time that the equipment is in use over the specified period of time
 - D = distance from the receiver to the piece of equipment

Table 4.13.D: Typical Maximum Construction Equipment Noise Levels (L_{max})

Type of Equipment	Acoustical Usage Factor	Suggested Maximum Sound Levels for Analysis (dBA L _{max} at 50 ft)
Air Compressor	40	80
Backhoe	40	80
Cement Mixer	40	85
Concrete/Industrial Saw	20	90
Crane	16	85
Excavator	40	85
Generator	50	82
Grader	40	85
Loader	40	80
Paver	50	85
Roller	20	85
Rubber Tire Dozer	40	85
Scraper	40	85
Tractor	40	84
Truck	40	84
Welder	40	73

Source: Roadway Construction Noise Model (FHWA 2006).
dBA = A-weighted decibels
ft = feet
L_{max} = maximum instantaneous noise level

Each piece of construction equipment operates as an individual point source. Utilizing the following equation, a composite noise level can be calculated when multiple sources of noise operate simultaneously:

$$Leq (composite) = 10 * \log_{10} \left(\sum_{1}^n 10^{\frac{Ln}{10}} \right)$$

Utilizing the equations from the methodology above and the reference information in Tables 4.13.D and 4.13.E, the composite noise level of the two loudest pieces of equipment, as required by the FTA criteria, would be 85 dBA Leq at a distance of 50 ft from the construction area. This noise level would be the same for the loudest phase at each project location. Table 4.13.E provides a summary of the reference noise levels during construction by phase.

Once composite noise levels are calculated, reference noise levels can then be adjusted for distance using the following equation:

$$Leq (at distance X) = Leq (at 50 feet) - 20 * \log_{10} \left(\frac{X}{50} \right)$$

In general, this equation shows that doubling the distance would decrease noise levels by 6 dBA while halving the distance would increase noise levels by 6 dBA. Table 4.13.F shows the expected construction noise levels at the surrounding sensitive receptors.

Table 4.13.E: Noise Levels by Construction Phase

Location	Phase ¹	Type of Equipment	Reference Level at 50 ft (dBA L _{max})	Composite Reference Level at 50 ft	
				dBA L _{max}	dBA L _{eq}
Intertie Site	Trenching	Concrete Saw	90	91	85
		Excavator	85		
Existing Pump Station	Demolition	Concrete Saw	90	91	85
		Dozer	85		
Proposed Pump Station	Grading	Concrete Saw	90	91	85
		Dozer	85		

Source: Compiled by LSA Associates, Inc. (December 2020).

¹ Phases that would generate the highest noise levels

dBA = A-weighted decibels L_{eq} = equivalent continuous sound level
ft = feet L_{max} = maximum instantaneous noise level

Table 4.13.F: Noise Levels at Sensitive Receptors

Location	Sensitive Receptor		Composite Reference Level at 50 ft (dBA L _{eq})	Distance to Sensitive Receptor (ft)	Noise Level (dBA L _{eq})
	Land Use	Direction			
Intertie Site	Single Family Home	South	85	480	65
Existing Pump Station	Single Family Home	Southwest	85	890	60
Proposed Pump Station	Single Family Home	South	85	1,230	57

Source: Compiled by LSA Associates, Inc. (December 2020).

dBA = A-weighted decibels L_{eq} = equivalent continuous sound level
ft = feet

The nearest sensitive receptor would be the single-family homes located 480 ft to the south of the intertie location. It is expected that noise levels during construction at the nearest residences to the intertie location would approach 65 dBA L_{eq}. All other sensitive receptors are located farther from areas of construction and would therefore experience lower noise levels.

While construction-related, short-term noise levels have the potential to be higher than existing ambient noise levels (which range from 52.1 to 68.2 dBA L_{eq} during daytime hours) in the vicinity of the proposed Project, the noise impacts would no longer occur once project construction is completed. Furthermore, construction-related noise impacts at the nearest sensitive receptors would remain below the 90 dBA L_{eq} 1-hour construction noise level criteria as established by the FTA.¹

Compliance with the City’s Noise Ordinance would ensure that construction noise does not disturb the residential uses during hours when ambient noise levels are likely to be lower (i.e., at night). Mitigation Measure NOI-1 would limit construction hours and require the implementation of noise-

¹ Federal Transit Administration (FTA). 2018. *Transit Noise and Vibration Impact Assessment Manual*. FTA Report No. 0123. September.

reducing measures during construction. Therefore, with implementation of Mitigation Measure NOI-1, construction activity noise impacts would be less than significant.

Off-Site Operation-Related Impacts. Noise impacts associated with long-term, operation-related noise must comply with the standards presented in Section 11.16.040 of the City’s Municipal Code, which were described above. There would be no operational noise at the intertie location or the decommissioned pump station. Section 2.5 of this document provides a detailed description of the operations associated with the proposed Project. The new equipment associated with the proposed Project has the potential to generate increased noise levels to the surrounding receptors. The primary source of noise would include the operation of the new pump station. As shown in Table 4.13.G, the components of the new pump stations would include pumps, an exhaust fan, a compressor, and an AC drive that would have a composite noise level of approximately 81 dBA L_{eq} at a distance of 10 ft.

Table 4.13.G: Operational Equipment Noise Levels

Equipment	Reference Noise Level (dBA)	Reference Distance (ft)	Noise Level at 10 ft (dBA)	Quantity	Composite Noise Level at 10 ft (dBA)
Exhaust Fan (TPI-18 Direct Drive)	80	5	74	1	74
Pump (Flowserve Mark 3 Pump)	81	3.3	71	7	80
AC Drive (PowerFlex 750-Series)	72	6.7	69	1	69
Compressor (CAGI SK20T)	68	3.3	58	1	58
Heat Pump (Trane)	54	3.3	44	1	44
Heat Pump (Tran ST Series)	53	3.3	43	1	43
Combined Noise Level					81

Source: Compiled by LSA Associates, Inc. (December 2020).
dBA = A-weighted decibels
ft = feet

This level would be reduced to 39 dBA L_{eq} at the nearest residential property line to the south, approximately 1,230 ft away, due to distance attenuation. The resulting level would be well below the daytime and nighttime noise standards of 55 dBA L_{eq} and 50 dBA L_{eq} , respectively. The new pump station would also be housed within a concrete masonry unit (CMU), which would further substantially reduce noise levels generated during operation. Operational noise impacts would be less than significant and no mitigation is required.

Significance Determination: Less than Significant with Mitigation Incorporated

Mitigation Measure:

NOI-1 Construction Noise. Prior to commencement of construction activities, Irvine Ranch Water District (IRWD) shall verify the Project includes the following requirements to ensure that the greatest distance between noise sources and sensitive receptors during construction activities has been achieved:

- Construction activities occurring as part of the Project shall be subject to the limitations and requirements of the City of Lake Forest Municipal Code, which

states that construction activities are prohibited between the hours of 8:00 p.m. and 7:00 a.m. on weekdays, including Saturday, or at any time on Sunday or a legal City of Lake Forest holiday.

- During all project area excavation and on-site grading, the project contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers consistent with manufacturers’ standards.
- To the best extent possible, the project contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest the Project area.
- Construction staging areas shall be located as far away from sensitive receptors as possible during all phases of construction.

b) Would the Project result in generation of excessive ground-borne vibration or ground-borne noise levels?

Construction Vibration Impacts. Vibration generated by construction equipment can result in varying degrees of ground vibration, depending on the equipment. The operation of construction equipment causes ground vibrations that spread through the ground and diminish in strength with distance. Buildings on soil near an active construction area respond to these vibrations, which range from imperceptible to low rumbling sounds with perceptible vibrations and slight damage at the highest vibration levels. Vibration and ground-borne noise impacts tend to occur when physically forceful or ground-penetrating equipment is used (e.g., pile drivers) or where blasting is necessary.

Construction activities associated with the proposed Project would include excavation and earth-moving vehicles (i.e., excavators which would be similar to large bulldozers), but no pile driving or percussive impact construction methods would be used. Table 4.13.H shows the PPV values and vibration levels (in terms of VdB) from construction vibration sources at 25 ft from construction vibration sources for comparison purposes.

Table 4.13.H: Vibration Source Amplitudes for Construction Equipment

Equipment	Reference PPV/L _v at 25 ft	
	PPV (in/sec)	L _v (VdB) ¹
Hoe Ram	0.089	87
Large Bulldozer	0.089	87
Caisson Drilling	0.089	87
Loaded Trucks	0.076	86
Jackhammer	0.035	79
Small Bulldozer	0.003	58

Source: *Transit Noise and Vibration Impact Assessment Manual* (FTA 2018).

¹ RMS VdB re 1 μin/sec.

μin/sec = microinches per second
ft = feet

FTA = Federal Transit Administration
in/sec = inches per second

L_v = velocity in decibels
PPV = peak particle velocity
RMS = root-mean-square
VdB = vibration velocity decibels

At the intertie location, loaded trucks used for trenching would generate the highest ground-borne vibration levels. Construction equipment would be located approximately 50 feet from the southeast corner of the existing medical office building located to the north of the intertie location (29300 Portola Parkway). Based on the vibration source amplitudes for construction equipment provided in Table 4.13.H, a loaded truck would generate vibration levels of 0.031 PPV (in/sec) and 77 VdB when measured at 50 ft. With a vibration level of 0.061 PPV in/sec, vibration levels would be well below the damage threshold of 0.2 PPV in/sec. In order to account for the coupling adjustments as specified in Table 6-12 of the FTA Manual, for a 1-2 story masonry building, the vibration levels would be reduced by 7 VdB and the interior levels would approach 70 VdB which is below the 72 VdB human response criteria for buildings with operating rooms.

At the proposed pump station and the existing decommissioned pump station, loaded trucks used for construction or demolition would generate the highest ground-borne vibration levels. Based on the FTA Manual, a truck would generate vibration levels of 0.020 PPV (in/sec) and 75 VdB when measured at 60 ft, which is the approximate distance to the nearest building at either of these locations. With a vibration level of 0.020 PPV in/sec, vibration levels would be well below the damage threshold of 0.2 PPV in/sec. In order to account for the coupling adjustments as specified in Table 6-12 of the FTA Manual, for a 1-2 story masonry building, the vibration levels would be reduced by 7 VdB and the interior levels would approach 68 VdB which is below the 84 VdB human response criteria for office buildings.

Short-term construction impacts related to ground-borne vibration or ground-borne noise would be temporary in nature and would cease upon construction. Therefore, construction vibration impact areas would be considered less than significant, and no mitigation is required.

Operational Impacts. The proposed equipment to be installed is expected to generate minimal vibration levels. Due to the distance of the proposed equipment to the nearest uses, operation of the proposed Project would not generate ground-borne noise or vibration at off-site receptors. Therefore, no ground-borne noise and ground-borne vibration impacts would occur, and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

The proposed Project is not located within an airport land use plan or within 2 mi of a public airport or public use airport. The nearest public use airport is John Wayne Airport in the City of Santa Ana, approximately 11.4 mi west of the Project site.¹ As a result, the proposed Project would not expose people residing or working in the Project area to excessive noise levels from aircraft. Therefore,

¹ John Wayne Airport (JWA). 2019. Annual 60, 65, 70, and 75 CNEL Noise Contour Maps.

no noise related to the Project site's proximity to a public airport or any airport land use plan would occur, and no mitigation is required.

Significance Determination: No Impact

Mitigation Measures: No mitigation is required.

4.14 POPULATION AND HOUSING

		Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>					
a)	Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b)	Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

4.14.1 Impact Analysis

a) Would the Project induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

The proposed Project includes construction and operation of a new recycled water pump station and intertie to improve the water quality within IRWD’s Zone B to C recycled water system. Construction of the proposed Project would provide short-term jobs over an approximately 12-month period, which is anticipated to start in May 2021 and end in April 2022. Many of the construction jobs would be temporary or seasonal and would be specific to the variety of construction activities. The workforce would include a variety of craftspeople (e.g., cement finishers, ironworkers, welders, carpenters, electricians, painters, and laborers). Generally, construction workers are only at a job site for the time frame in which their specific skills are needed to complete that phase of construction. Although the proposed Project would increase the number of employees at the Project site during construction activities, it is expected that local and regional construction workers would be available to serve the proposed Project’s construction needs. Project-related construction workers would not be expected to relocate their household’s place of residence as a consequence of working on the proposed Project; therefore, Project construction would not be expected to increase the population of Lake Forest or its surrounding communities. There is no housing component proposed as part of the proposed Project; therefore, the Project would not directly induce population growth in the region. In addition, there would not be any full-time staff associated with the proposed Project, and existing IRWD employees would provide maintenance and operations for the facility. Finally, the proposed Project does not include the extension of roadways or other infrastructure that could indirectly induce substantial population growth in the area. Therefore, the proposed Project would not directly or indirectly induce substantial population growth, and no mitigation is required.

Significance Determination: No Impact

Mitigation Measures: No mitigation is required.

b) Would the Project displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Implementation of the proposed Project consists of the construction and operation of a proposed pump station located on an existing site, which was previously developed with Lake Forest Well No. 5. The proposed intertie would be located underground in and adjacent to an existing roadway and would not displace existing people or housing. The existing pump station (which will be removed) is located approximately 897 ft from the nearest residential use and would not displace existing people or housing. Therefore, implementation of the proposed Project would not result in an impact related to the displacement of substantial numbers of existing housing or people, thereby necessitating the construction of replacement housing elsewhere. No mitigation is required.

Significance Determination: No Impact.

Mitigation Measures: No mitigation is required.

4.15 PUBLIC SERVICES

		Less Than Significant			
		Potentially Significant Impact	With Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>					
a)	Result in substantial adverse physical impacts associated with the provision of or need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i)	Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii)	Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iii)	Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iv)	Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
v)	Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

4.15.1 Impact Analysis

a) Would the project result in substantial adverse physical impacts associated with the provision of or need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

- i) Fire protection?*
- ii) Police protection?*
- iii) Schools?*
- iv) Parks?*
- v) Other public facilities?*

The proposed Project is being developed for the purpose of improving the water quality within IRWD’s Zone B to C recycled water system. The proposed Project would not require additional public services (e.g., fire protection, police protection, schools, or parks) beyond what currently exists. Therefore, the proposed Project would have no impact on public services and no mitigation is required.

Significance Determination: No Impact
Mitigation Measures: No mitigation would be required.

4.16 RECREATION

		Less Than Significant			
		Potentially Significant Impact	With Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>					
a)	Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b)	Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

4.16.1 Impact Analysis

a) *Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?*

and

b) *Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?*

The proposed Project would provide new facilities that would assist with the recycled water supply in IRWD's Zone C service area. The proposed Project does not include recreational facilities and would not change the number of employees on site or increase the number of residents in Lake Forest or the surrounding communities. Therefore, the proposed Project would not result in the increased use of existing neighborhood or regional parks or other recreational facilities or create a demand for the construction or expansion of parks and recreational facilities beyond what currently exists. Therefore, there would be no impact to parks or recreation resources, and no mitigation is required.

Significance Determination: No Impact

Mitigation Measures: No mitigation is required.

4.17 TRANSPORTATION

<i>Would the project:</i>		Potentially Significant Impact	Less than Significant With Mitigation Incorporated	Less than Significant Impact	No Impact
a)	Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b)	Conflict or be inconsistent with CEQA Guidelines section 15064.3, or conflict with an applicable congestion management program, including, but not limited to, level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c)	Substantially increase hazards due to a geometric design feature (e. g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d)	Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

This section describes the existing transportation and circulation conditions in the vicinity of the Project site and addresses the potential impacts of the proposed Project in terms of transit, roadway, bicycle and pedestrian facilities, safety, and access.

4.17.1 Impact Analysis

a) Would the Project conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

The proposed Project includes the construction of a new pump station between 20381 Lake Forest Drive and 20411 Lake Forest Drive in Lake Forest. The new pump station would be constructed on a site previously occupied by the existing IRWD Lake Forest Well No. 5. Construction of the proposed Project is anticipated to take approximately 12 months, weather permitting (42 weeks).

Typical operation of the proposed Project would be conducted remotely, and there would not be any full-time dedicated staff at the site. The proposed Project will not generate vehicle trips for normal day-to-day operations.

In order to assess the impact of the proposed Project on the surrounding circulation system, the proposed Project trips that would be generated on a temporary basis throughout each phase of construction were estimated based on the anticipated number of workers and trucks.

Construction of the proposed Project will include the following six phases (phase durations and daily worker and truck estimates):

- **Phase 1: Earthwork** (8 workers and 2 haul trucks per day for 4 weeks)
- **Phase 2: Steel Pipe and Yard Piping** (8 workers per day for 3 weeks)

- **Phase 3: Concrete** (12 workers, 1 pumper truck, and 4 delivery trucks per day for 7 weeks)
- **Phase 4: Installation of Concrete Masonry Units (CMU)** (8 workers and 1 concrete truck per day for 8 weeks)
- **Phase 5: Installation of Steel Girders and Construction of CMU Pump Station Building** (8 workers and 1 concrete truck per day for 20 weeks)
- **Phase 6: Intertie Construction and Demolition of the Existing Pump Station** (6 workers and 1 truck per day for 6 weeks)

It is assumed that workers would arrive at the site in the a.m. peak hour and depart the site during the p.m. peak hour. Truck trips are anticipated to occur throughout the day, including both peak hours. A passenger car equivalent (PCE) factor of 2.0 has been applied to the trucks.

As shown in Table 4.17.A, the overlap of Phase 5 (Steel Girders and Pump Station Building) and Phase 6 (Intertie Construction and Demolition of Existing Pump Station) is the most intense period of construction (i.e., the highest construction trip generation). Over approximately 6 weeks, concurrent Phases 5 and 6 are anticipated to generate 48 ADT, including 18 inbound trips in the a.m. peak hour and 18 outbound trips in the p.m. peak hour, in PCEs. All other construction phases would generate 44 or fewer ADT, including 16 or fewer peak-hour trips, in PCEs.

The construction-related trip generation for the proposed Project is nominal (maximum of 18 or fewer peak-hour trips for any period of construction) over a duration of approximately 12 months (and a peak of only 6 weeks).

The proposed Project is not anticipated to result in any level of service (LOS) or operational deficiencies to the surrounding circulation system based on its low number of trips for a temporary duration; however, the proposed Project would require temporary lane and sidewalk closures on Portola Parkway to allow construction of the intertie. Temporary lane closures would be implemented consistent with the recommendations of the current CATTCH (previously known as the California Joint Utility Traffic Control Manual). The CATTCH provides basic standards for the safe movement of all road users (including motorists, bicyclists, and pedestrians on streets, highways, and bikeways) through construction zones in accordance with Section 21400 of the California Vehicle Code and the California Manual on Uniform Traffic Control Devices. Mitigation Measure TRA-1 requires the preparation of a CTMP based on the recommendations of the CATTCH. The CTMP would further ensure that acceptable intersection LOS and pedestrian access are maintained during peak traffic hours and that construction traffic does not queue on public roadways.

Table 4.17.A: Construction Trip Generation Summary

Phase			Daily Vehicles				Vehicle Trip Generation						PCE Trip Generation								
Description	Duration	Location	Description	Quantity	Type	PCE ¹	ADT	AM Peak Hour			PM Peak Hour			ADT	AM Peak Hour			PM Peak Hour			
								In	Out	Total	In	Out	Total		In	Out	Total	In	Out	Total

Source: Compiled by LSA Associates, Inc. (December 2020).

¹ A worker vehicle has a PCE of 1.0 and a construction truck has a PCE of 2.0.

² Workers are assumed to arrive in the a.m. peak hour and depart during the p.m. peak hour. Truck trips are assumed to occur throughout the day, including the peak hours.

³ This phase includes 4 total trucks (1 concrete, 1 dump, and 2 delivery trucks).

ADT = average daily trips

CML&C = cement mortar lined and coated

CMU = concrete masonry unit

PCE = passenger car equivalent

Although the proposed Project would generate construction (temporary) vehicles/trucks, it would not preclude alternative modes of transportation or facilities (e.g., transit, bicycle, or pedestrian). The proposed Project is consistent with the City's General Plan Mobility Element (adopted June 2020).¹ The proposed Project would not make any permanent changes to the public right-of way in the Project vicinity and would not conflict with existing or planned transit, roadway, bicycle, or pedestrian facilities. Therefore, with implementation of Mitigation Measure TRA-1, the proposed Project would not conflict with a program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.

Significance Determination: Less Than Significant with Mitigation Incorporated
Mitigation Measures:

TRA-1 Construction Traffic Management Plan (CTMP). Prior to commencement of grading activities, Irvine Ranch Water District (IRWD) shall prepare a CTMP and shall ensure that the plan is implemented during construction with the goal of maintaining acceptable intersection level of service (LOS) during peak traffic hours and ensuring that construction traffic does not queue on public roadways. The CTMP shall be consistent with the current California Temporary Traffic Control Handbook (CATTCH). At a minimum, the CTMP shall include, but not be limited to, the following:

- Provisions for temporary traffic control to improve traffic flow on public roadways and ensure the safe access into and out of the site (e.g., warning signs, lights and devices, and flag person).
- Prohibiting construction-related vehicles from parking on public streets.
- Providing safety precautions for pedestrians and bicyclists through such measures as alternate routing and protection barriers.
- Obtaining the required permits for truck haul routes from the City of Lake Forest.
- All emergency access to the Project site and adjacent areas shall be kept clear and unobstructed during all phases of demolition and construction.
- The Orange County Sheriff's Department and the Orange County Fire Authority (OCFA) shall be notified a minimum of 1 week (7 days) in advance of any lane closures or roadway work so that emergency vehicles can be rerouted during construction if deemed necessary in the expert opinion of the Orange County Sheriff's Department and/or OCFA.

¹ City of Lake Forest. 2020. Lake Forest 2040 General Plan Mobility Element. Adopted June 2020. Website: <https://www.lakeforestca.gov/DocumentCenter/View/10650/Mobility-Element> (accessed November 2020).

- The Orange County Transportation Authority (OCTA) shall be notified regarding any affected locations a minimum of 10 working days prior to construction so that transit service can be rerouted if deemed necessary in the expert opinion of OCTA.

b) *Would the Project conflict or be inconsistent with CEQA Guidelines section 15064.3, or conflict with an applicable congestion management program, including, but not limited to, level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?*

State CEQA Guidelines Section 15064.3, subdivision (b), states that transportation impacts for land use projects are to be measured by evaluating the project's vehicle miles traveled (VMT), as outlined in the following:

Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high-quality transit corridor should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be presumed to have a less than significant transportation impact.

VMT is the amount and distance of automobile travel attributable to a project. According to the Office of Planning and Research (OPR) *Technical Advisory on Evaluating Transportation Impacts in CEQA* (December 2018),¹ "automobile" refers to "on-road passenger vehicles, specifically cars and light trucks." Thus, project trucks do not need to be included in the project VMT assessment.

Additionally, the OPR technical advisory recommends VMT screening thresholds for smaller projects. The footnote on page 12 of the OPR technical advisory states the following:

Screening Thresholds for Small Projects

Many local agencies have developed screening thresholds to indicate when detailed analysis is needed. Absent substantial evidence indicating that a project would generate a potentially significant level of VMT, or inconsistency with a Sustainable Communities Strategy (SCS) or general plan, projects that generate or attract fewer than 110 trips per day generally may be assumed to cause a less-than-significant transportation impact.

The OPR technical advisory recommends that projects generating fewer than 110 trips will be assumed to cause a less than significant transportation impact. In addition, the City of Lake Forest

¹ Office of Planning and Research (OPR). 2018. Technical Advisory on Evaluating Transportation Impacts in CEQA. December. Website: http://opr.ca.gov/docs/20190122-743_Technical_Advisory.pdf (accessed November 2020).

Transportation Analysis Guidelines (July 1, 2020)¹ has established a screening criterion for projects generating up to 110 ADT. As such, a project generating 110 ADT or less is screened out of a VMT analysis due to the presumption of a less-than-significant impact.

The proposed Project is estimated to generate nominal ADT (48 passenger vehicle ADT) and peak-hour trips (18 trips) on a temporary basis for construction, and it would not generate any new vehicle trips during day-to-day operations since there would not be any full-time dedicated staff on site. As such, it is considered a small project and assumed to have a less than significant impact on transportation. Therefore, the proposed Project is not subject to a VMT analysis.

The proposed Project is not anticipated to result in any LOS or operational deficiencies to the surrounding circulation system based on its description, location, and low trip generation during temporary construction (peak of 48 ADT, including 18 trips in the a.m. and p.m. peak hours). Therefore, the proposed Project would not conflict with any congestion management program, standards, or travel demand measures for roads or highways.

Potential impacts would be less than significant, and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

c) Would the Project substantially increase hazards due to a geometric design feature (e. g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Regional access to the pump station Project site is provided by Lake Forest Drive. Site access for the existing pump station and reservoir is controlled by a gate on the access road near its intersection with Regency Lane (southeast of the intersection of Lake Forest Drive/Regency Lane). The intertie site is publicly accessible from Portola Parkway. Access would not change as part of the proposed Project. As such, the proposed Project would not substantially increase hazards for vehicles due to a geometric design feature or incompatible uses, and impacts would be less than significant. No mitigation is required.

Significance Determination: Less than Significant Impact

Mitigation Measures: No Mitigation is Required

d) Would the Project result in inadequate emergency access?

Site access would not change as part of the proposed Project and would continue to be accessed from Lake Forest Drive (pump station site) and a gated access road on Regency Lane via the intersection of Lake Forest Drive/Regency Lane (existing pump station and reservoir). Therefore, emergency access would continue to be provided from Regency Lane (access road). Since the proposed Project would not modify the existing configuration of the Project site, emergency access

¹ City of Lake Forest. 2020. City of Lake Forest Transportation Analysis Guidelines. July 1. Website: <https://lakeforestca.gov/DocumentCenter/View/823/CEQA-Significance-Thresholds-Guide-2020--Transpo-Analysis-GuidelinesPDF> (accessed November 2020).

to the site would not be affected. Impacts associated with emergency access would be less than significant. No mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

4.18 TRIBAL CULTURAL RESOURCES

		Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
<i>Would the project:</i>					
a)	Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:				
i)	Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
ii)	A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

4.18.1 Impact Analysis

- a) *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is*
- i) *Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?*
- ii) *A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1? In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?*

The following responses address Thresholds 4.18(a)(i) and 4.18(a)(ii).

Chapter 532, Statutes of 2014 (i.e., AB 52), requires that Lead Agencies evaluate a project’s potential to impact “tribal cultural resources”. Such resources include “[s]ites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are eligible for inclusion in the California Register of Historical Resources or included in a local

register of historical resources.” AB 52 also gives Lead Agencies the discretion to determine, supported by substantial evidence, whether a resource qualifies as a “tribal cultural resource”.

Also, per AB 52 (specifically, PRC 21080.3.1), a CEQA Lead Agency must consult with California Native American tribes that are traditionally and culturally affiliated with the geographic area of the proposed Project and have previously requested that the Lead Agency provide the tribe with notice of such projects.

As discussed in Section 4.5, the results of the records search indicate that eight previous cultural resource studies have included the Project site. There have been 20 additional studies conducted within 0.25 mi of the Project site. In addition, 11 pre-contact archaeological resources have been previously recorded within 0.25 mi of the Project site. However, no cultural resources have been previously recorded within the Project site. In addition, no cultural resources were identified during the field survey of the Project site conducted on December 7, 2020. Furthermore, the Project site does not contain any buildings or structures that meet any California Register criteria or qualify as “historical resources” as defined by CEQA. Therefore, the proposed Project would not cause a substantial adverse change in the significance of a historical resource as defined in Section 15064.5 of the *State CEQA Guidelines* or PRC Section 5020.1(k).

On November 19, 2020, IRWD sent letters for the purpose of AB 52 consultation to the following tribes:

- Gabrieleno Band of Mission Indians – Kizh Nation, Andrew Salas, Chairman
- Juaneño Band of Mission Indians – Acjachemen Nation, Joyce Stanfield Perry, Tribal Manager

As stated in the letters to the Kizh and Acjachemen Nations, if additional information about the Project or consultation with IRWD is requested, IRWD must be contacted within 30 days of receipt of the letter. The Acjachemen Nation did not request additional consultation with IRWD. The Kizh Nation contacted IRWD on December 18, 2020 to request that a meeting be held with IRWD. IRWD held its consultation meeting with the Kizh Nation on February 3, 2021. The Kizh Nation provided IRWD with some tribal history for the vicinity of the Project site, and indicated they would send additional information following the meeting. The Kizh Nation did indicate there have been recent tribal cultural resources found at the nearby Nakase development site in Lake Forest. Given that the Nakase site is in close proximity to the proposed site, the Kizh Nation informed IRWD that they believe there is a high probability for additional tribal indicators in the area. Given the sensitivity of the Project area, the Kizh Nation feels tribal monitoring is warranted during ground-disturbing activities associated with Project implementation.

Excavation for this proposed Project is expected to be limited in terms of location, as well as vertical and horizontal extent. At the existing pump station there would be no excavation. At the proposed intertie location, excavation is expected to extend to a depth of 6.5 ft. At the proposed pump station site, excavation for the building and retaining wall will extend to a depth of 3 ft bgs. The two Project component locations with proposed ground disturbance (i.e., the proposed new pump station and proposed intertie locations) have been monitored for archaeological resources during previous

ground-disturbing activities with negative findings for cultural resources.^{1,2} Given the previous disturbance of the Project site and the negative findings during archaeological monitoring of the previous ground disturbance, the likelihood of encountering subsurface tribal cultural resources during ground-disturbing construction activities is low. However, in the unlikely event that excavation for the proposed new pump station and proposed intertie uncovers a yet-to-be-discovered tribal cultural resource, implementation of Mitigation Measure TCR-1 would reduce any potential impacts to previously undiscovered tribal cultural resources to a less than significant level.

Significance Determination: Less than Significant with Mitigation Incorporated.

Mitigation Measure:

TCR-1 Unknown Tribal Cultural Resources. Prior to the commencement of earthwork activities in sections that are outside of a previously ground-filled area, the Irvine Ranch Water District (IRWD) shall provide written notification to the Native American representatives from the Gabrieleno Band of Mission Indians – Kizh Nation (“tribal representatives”) indicating the date of the commencement of earthwork activities. The tribal representatives shall be provided reasonable access to the Project site in a manner that does not interfere with the earthwork activities. Tribal representatives, at their own expense, and in a manner that does not interfere with earthwork activities, shall be allowed to observe subsurface ground-disturbing construction activities for the proposed pump station. If any tribal cultural resources are identified during the observation and if evidence is presented that the discovery proves to be potentially significant under the California Environmental Quality Act (CEQA), as determined by a qualified archaeologist, the tribal representatives, and the qualified archaeologist, in consultation with IRWD, shall determine the appropriate actions for exploration and/or recovery.

4.19 UTILITIES AND SERVICE SYSTEMS

<i>Would the project:</i>		Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b)	Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c)	Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project’s projected demand in addition to the provider’s existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d)	Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e)	Comply with federal, state, and local management and reduction statutes and regulations related to solid wastes?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

4.19.1 Impact Analysis

a) Would the Project require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Water and Wastewater. The Project site is within IRWD’s water and wastewater service area. IRWD provides potable water, sewer service, and recycled water to 422,000 customers in Orange County across 181 square miles. IRWD’s service area includes approximately 116,000 water connections and 20,200 sewer connections, and serves 94,381 acre-feet of water annually.¹ IRWD’s main sources of water include: (1) groundwater; (2) imported water from the Municipal Water District of Orange County, which purchases water from MWD; and (3) recycled water. Approximately 48 percent, 27 percent, and 21 percent of IRWD’s water comes from groundwater, imported water, and recycled water, respectively.²

The purpose of the proposed Project is to improve the quality of water within IRWD’s Zone B to C recycled water system by constructing a new recycled water pump station. The proposed intertie would augment recycled water supplies into the IRWD Lake Forest Zone C system during maintenance operations or a request from SMWD for IRWD to provide recycled water flows into the

¹ Irvine Ranch Water District (IRWD). “About Us.” Website: <https://www.irwd.com/about-us/> (accessed December 11, 2020).

² Irvine Ranch Water District (IRWD). Water Supply & Reliability. Website: <https://www.irwd.com/services/water-supply-reliability> (accessed December 11, 2020).

Upper Oso Reservoir. The proposed intertie would also be used by IRWD to deliver excess recycled water flow to SMWD during low demand periods. Although the Project itself includes the construction of a new recycled water facility and associated improvements, the proposed pump station would replace the existing pump station, which has exceeded its useful service life. Additionally, as described in the Project Description, the proposed Project would construct a building to house pumping facilities and would be operated remotely; therefore, there would be no staff on the site on a full-time basis. Further, overall water and wastewater demands would remain similar to existing conditions, and any increase in water demand or wastewater generation during Project construction or operation would be minimal and incidental to the overall IRWD system. Therefore, a less than significant impact would occur, and no mitigation is required.

Storm Water Drainage Facilities. As discussed in Section 4.10, Hydrology and Water Quality, the proposed Project would generally maintain the existing drainage pattern on the Project site and would not substantially increase the volume of storm water runoff from the Project site. Therefore, the proposed Project would not contribute additional runoff to the downstream storm water drainage facilities or cause the expansion of existing facilities. Impacts to storm water drainage facilities would be less than significant, and no mitigation is required.

Electric Power. Refer to Section 4.6, Energy, for further discussion related to the proposed Project's impacts with respect to existing and projected supplies of electricity. As discussed further in Section 4.6, the Project would not require or result in the relocation or construction of new or expanded electric power facilities, the construction of which could cause significant environmental effects. No mitigation would be required.

Natural Gas. The proposed Project does not include any utility improvements related to natural gas. Therefore, the proposed Project would not require or result in the relocation or construction of new or expanded natural gas facilities, the construction of which could cause significant environmental effects. No mitigation would be required.

Telecommunications. Construction activities associated with the proposed Project would not increase the demand for telecommunications facilities. In addition, the proposed Project would not involve the construction or relocation of new or expanded telecommunications facilities. Therefore, implementation of the proposed Project would not result in impacts related to the construction or relocation of existing telecommunications facilities, and no mitigation would be required.

Summary. The proposed Project would not require or result in the relocation or construction of new or expanded facilities for water, wastewater treatment, storm drainage, electric power, natural gas, or telecommunications. Existing facilities have the capacity to serve the anticipated uses, and the Project would not substantially increase demand upon these facilities as compared to historic and existing conditions at the Project site. Therefore, impacts to these utility facilities would be less than significant, and no mitigation would be required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

b) Would the Project have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

As previously stated in Response 4.10(a) above, overall water demand would remain similar to existing conditions because the proposed pump station would replace the existing pump station, which has extended its useful service life. Any increase in water demand during Project construction or operation would be minimal and incidental to the overall IRWD system. Therefore, water demand from the proposed Project would be within IRWD's current and projected water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years. Impacts related to water supplies would be less than significant, and no mitigation would be required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

c) Would the Project result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

The purpose of the proposed Project is to improve the quality of water within IRWD's Zone B to C recycled water system by constructing a new recycled water pump station. As described in the Project Description, the proposed Project would construct a building to house pumping facilities and would be operated remotely; therefore, staff visits to the site would be limited to periods of routine maintenance and to periodically check on facilities. Furthermore, because the existing site for the proposed pump station is not currently served by a wastewater treatment provider and the proposed Project would not include new wastewater connections, impacts related to a wastewater treatment provider having adequate capacity to serve the proposed Project's demands are not applicable. Therefore, a less than significant impact would occur, and no mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

d) Would the Project generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

The existing site for the proposed pump station is vacant and has already been mass graded as a result of a previous project. Therefore, construction at the proposed pump station site is not expected to generate significant amounts of solid waste during construction given that there are no structures or features to demolish. Although the removal of the existing pump station would generate waste associated with the disposal of the interior piping, valves, fittings, gauges, sensors, pumps, bases, and pipe stands, the pump bases and any other raised concrete surfaces would be left in place. Further, no buildings would be demolished as part of the decommissioning of the existing pump station, and Project wastes during construction would not likely be significant enough to have a meaningful impact, if at all, on nearby landfills. Further, because operation of the Project would occur remotely and there would be no full-time staff on the site, the Project would not

generate substantial amounts of solid waste during its operational phase. Therefore, solid waste generated by the proposed Project would not cause the capacity of the Frank Bowerman Landfill, which is the closest landfill to the Project site, to be exceeded. The proposed Project would result in a less than significant impact to solid waste and landfill facilities, and no mitigation would be required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

e) Would the Project comply with federal, state, and local management and reduction statutes and regulations related to solid wastes?

The California Integrated Waste Management Act (AB 939) changed the focus of solid waste management from landfill to diversion strategies (e.g., source reduction, recycling, and composting). The purpose of the diversion strategies is to reduce dependence on landfills for solid waste disposal. AB 939 established mandatory diversion goals of 25 percent by 1995 and 50 percent by 2000.

Although the proposed Project is not expected to generate substantial amounts of solid waste during construction or operation, some solid waste could be generated. As such, the proposed Project would be required to comply with applicable federal, State, and local regulations related to solid waste disposal.

The proposed Project would comply with existing and future statutes and regulations, including waste diversion programs mandated by City, State, or federal law. In addition, as discussed above, the proposed Project would not result in an excessive production of solid waste that would exceed the capacity of the existing landfill serving the Project site. Therefore, the proposed Project would not result in an impact related to federal, State, and local statutes and regulations related to solid wastes, and no mitigation would be required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

4.20 WILDFIRE

<i>If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:</i>		Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a)	Impair an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b)	Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c)	Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d)	Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

4.20.1 Impact Analysis

a) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project impair an adopted emergency response plan or emergency evacuation plan?

According to the Lake Forest VHFHSZs in the LRA¹ map, the Project site is located within a non-VHFHSZ LRA.² Furthermore, as discussed in Section 4.9, Hazards and Hazardous Materials, and Section 4.17, Transportation, the proposed Project would require temporary lane and sidewalk closures on Portola Parkway to allow construction of the intertie. Temporary lane closures would be implemented consistent with the recommendations of the current CATTCH (previously known as the California Joint Utility Traffic Control Manual). The CATTCH provides basic standards for the safe movement of all road users (including emergency responders) through construction zones in accordance with Section 21400 of the California Vehicle Code and the California Manual on Uniform Traffic Control Devices. Mitigation Measure TRA-1 requires the preparation of a CTMP based on the recommendations of the CATTCH. The CTMP would further ensure that the proposed Project would not inhibit emergency response plan or an emergency evacuation plan. Operation of the proposed Project does not include any characteristics (e.g., permanent road closures or the long-term blocking of road access) that would physically impair or otherwise conflict with an adopted emergency response plan or emergency evacuation plan. The proposed Project would be required to comply with all applicable codes and ordinances for emergency vehicle access, which would ensure adequate access to, from, and on site for emergency vehicles. Adherence to these codes and

¹ An LRA is defined as land on which neither the state nor the federal government has the legal responsibility of providing fire protection.

² California Department of Forestry and Fire Protection (CAL FIRE), Fire and Resource Assessment Program. 2011. Lake Forest Very High Fire Hazard Severity Zones in LRA as Recommended by CAL FIRE. October.

ordinances, and Mitigation Measure TRA-1 would ensure that construction and operation of the proposed Project would not impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan. Therefore, incorporation of Mitigation Measure TRA-1 would ensure that the proposed Project would not inhibit an emergency response plan or an emergency evacuation plan during construction.

Significance Determination: Less Than Significant with Mitigation Incorporated

Mitigation Measures: Refer to Mitigation Measure TRA-1.

b) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

The proposed pump station site is surrounded by regional park/open space area associated with Serrano Creek Trail to the north, commercial development to the east and west, and Lake Forest Drive to the south. The proposed pump station would be developed on a concrete pad, which would reduce the amount of vegetation/combustible materials on site. The proposed pump station site is predominantly flat with no significant slopes adjacent to the site. The proposed intertie site is located along Portola Parkway and does not feature any significant slopes or open space. The existing pump station (to be removed) is located adjacent to the existing IRWD Zone B East Reservoir, and is surrounded by vacant land designated as regional park/open space to the west and east, and community park/open space to the south. Due to the nature of the project (i.e., small demolition project in a paved area) and the small size of the existing pump station, it is not anticipated to exacerbate wildfire risk. Furthermore, no portion of the Project site is located within a VHFHSZ. Therefore, the proposed Project would neither increase nor exacerbate wildfire risks nor expose project occupants to pollutant concentrations from a wildfire within a VHFHSZ, and impacts would be less than significant. No mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

c) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

The proposed Project would require the installation of a new intertie connection located along Portola Parkway, between El Toro Road and Saddleback Parkway. In addition, the proposed Project would require connection and improvements to existing on-site infrastructure systems. Although these utility connections and improvements would be extended throughout the Project site, they would primarily be located underground and would not exacerbate fire risk. Furthermore, the Project site is not located in or near State Responsibility Areas, and is not located within a VHFHSZ. Therefore, the proposed Project would not include infrastructure (e.g., roads, fuel breaks, emergency water sources, power lines, or other utilities) that would exacerbate fire risk or that

would result in impacts to the environment, and impacts would be less than significant. No mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

d) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the Project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

In its existing condition, the Project site is predominantly flat. According to the FEMA FIRM, the Project site is located within Zone X, Area of Minimal Flood Hazard. As described in Response 4.20 (a), the Project site is not located within a VHFHSZ. Additionally, as described in Response 4.7 (a) (iv), although the Project site is within a landslide zone,¹ the Project site is relatively flat and lacks significant slopes, and no significant slopes will be constructed as part of the Project. Therefore, downslope flooding as a result of runoff, post-fire slope instability, or drainage changes are unlikely to occur at the site. Furthermore, due to the developed nature of the Project site and distance from the nearest VHFHSZ, risks associated with wildfires are considered less than significant. The proposed Project would not expose people or structures to significant risks (including downslope or downstream flooding or landslides) as a result of runoff, post-fire slope instability, or drainage changes, and impacts would be less than significant. No mitigation is required.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

¹ California Geological Survey. 1998. Laguna Beach Quadrangle Seismic Hazard Zones. April 15.

4.21 MANDATORY FINDINGS OF SIGNIFICANCE

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

4.21.1 Impact Analysis

a) Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

The existing Project site consists primarily of bare ground and dirt pads surrounding an enclosed gravel area that was previously occupied by IRWD’s Lake Forest Well No. 5. The purpose of the proposed Project is to improve the quality of water within IRWD’s Zone B to C recycled water system. As described throughout the analysis in Chapter 4, with the incorporation of the identified mitigation measures, implementation of the proposed Project: (a) would not degrade the quality of the environment; (b) would not substantially reduce the habitats of fish or wildlife species; (c) would not cause a fish or wildlife population to drop below self-sustaining levels; (d) would not threaten to eliminate a plant or animal; and (e) would not eliminate important examples of major periods of California history or prehistory. With respect to the quality of the environment, the Project would not preclude the ability to achieve long-term environmental goals.

Significance Determination: Less than Significant with Mitigation Incorporated

Mitigation Measures: Refer to Mitigation Measures BIO-1, BIO-2, BIO-3, BIO-4, CUL-1, CUL-2, and PALEO-1.

- b) *Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)*

The existing Project site consists primarily of bare ground and dirt pads surrounding an enclosed gravel area that was previously occupied by IRWD's Lake Forest Well No. 5. The purpose of the proposed Project is to improve the quality of water within IRWD's Zone B to C recycled water system. Based on the Project Description and the preceding responses, impacts related to the proposed Project are less than significant or can be reduced to less than significant levels with incorporation of mitigation measures. The proposed Project's contribution to any significant cumulative impacts would be less than cumulatively considerable.

Significance Determination: Less Than Significant Impact

Mitigation Measures: No mitigation is required.

- c) *Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?*

The existing Project site consists primarily of bare ground and dirt pads surrounding an enclosed gravel area that was previously occupied by IRWD's Lake Forest Well No. 5. The purpose of the proposed Project is to improve the quality of water within IRWD's Zone B to C recycled water system. Based on the Project Description and the preceding responses, development of the proposed Project would not cause substantial adverse effects to human beings because all potentially significant impacts of the proposed Project can be mitigated to a less than significant level.

Significance Determination: Less than Significant with Mitigation Incorporated

Mitigation Measures: Refer to Mitigation Measures BIO-1, BIO-2, BIO-3, BIO-4, CUL-1, CUL-2, PALEO-1, TRA-1, and TCR-1.

5.0 MITIGATION MONITORING AND REPORTING PROGRAM

5.1 MITIGATION MONITORING REQUIREMENTS

Public Resources Code (PRC) Section 21081.6 (enacted by the passage of Assembly Bill [AB] 3180) mandates that the following requirements shall apply to all reporting or mitigation monitoring programs:

- The public agency shall adopt a reporting or monitoring program for the changes made to the Project or conditions of Project approval in order to mitigate or avoid significant effects on the environment. The reporting or monitoring program shall be designed to ensure compliance during Project implementation. For those changes which have been required or incorporated into the Project at the request of a Responsible Agency or a public agency having jurisdiction by law over natural resources affected by the Project, that agency shall, if so requested by the Lead Agency or a Responsible Agency, prepare and submit a proposed reporting or monitoring program.
- The Lead Agency shall specify the location and custodian of the documents or other material which constitute the record of proceedings upon which its decision is based. A public agency shall provide the measures to mitigate or avoid significant effects on the environment that are fully enforceable through permit conditions, agreements, or other measures. Conditions of Project approval may be set forth in referenced documents which address required mitigation measures or in the case of the adoption of a plan, policy, regulation, or other Project, by incorporating the mitigation measures into the plan, policy, regulation, or Project design.
- Prior to the close of the public review period for a draft Environmental Impact Report (EIR) or Mitigated Negative Declaration (MND), a Responsible Agency, or a public agency having jurisdiction over natural resources affected by the Project, shall either submit to the Lead Agency complete and detailed performance objectives for mitigation measures which would address the significant effects on the environment identified by the Responsible Agency or agency having jurisdiction over natural resources affected by the Project, or refer the Lead Agency to appropriate, readily available guidelines or reference documents. Any mitigation measures submitted to a Lead Agency by a Responsible Agency or an agency having jurisdiction over natural resources affected by the Project shall be limited to measures which mitigate impacts to resources which are subject to the statutory authority of, and definitions applicable to, that agency. Compliance or noncompliance by a Responsible Agency or agency having jurisdiction over natural resources affected by a Project with that requirement shall not limit that authority of the Responsible Agency or agency having jurisdiction over natural resources affected by a Project, or the authority of the Lead Agency, to approve, condition, or deny Projects as provided by this division or any other provision of law.

5.2 MITIGATION MONITORING PROCEDURES

The mitigation monitoring and reporting program has been prepared in compliance with PRC Section 21081.6. The program describes the requirements and procedures to be followed by IRWD to ensure that all mitigation measures adopted as part of the proposed Project would be carried out as described in this Initial Study/Mitigated Negative Declaration (IS/MND). Table 5.A lists each of the mitigation measures specified in this IS/MND and identifies the party or parties responsible for implementation and monitoring of each measure.

Table 5.A: Mitigation and Monitoring Reporting Program

Mitigation Measures	Responsible Party	Timing for Mitigation Measure
4.1 Aesthetics		
The proposed Project would not result in significant adverse impacts related to aesthetics. No mitigation would be required.		
4.2 Agriculture and Forestry Resources		
The proposed Project would not result in significant adverse impacts related to agriculture and forestry resources. No mitigation would be required.		
4.3 Air Quality		
The proposed Project would not result in significant adverse impacts related to air quality. No mitigation would be required.		
4.4 Biological Resources		
BIO-1 General Nesting Bird Surveys and Avoidance of Active Nests. In the event that any construction, vegetation clearing, or grading activities (including disking and demolition) should occur between February 1 and September 1, a qualified biologist should conduct a nesting bird survey within 5 days of commencement of construction activities to confirm the absence of nesting birds. If active nesting of birds is observed within 500 feet (ft) of the designated construction area during surveys, the biologist, in consultation with IRWD, will determine suitable buffers around the active nests (e.g., a minimum of 50 ft for passerines and 250 ft for raptors). The buffer areas must be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests. Prior to commencement of grading activities, IRWD shall verify that all Project grading and construction plans include specific documentation of compliance with the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code Section 3503. This would include completion of pre-construction survey reports that have been reviewed by staff and verification that appropriate buffers (if needed) have been noted on the plans and established in the field using orange snow fencing.	Construction Contractor and Project Biologist	During construction
BIO-2 Roosting Bat Survey. A qualified bat biologist should conduct a pre-construction roosting bat survey of the Project site and adjacent habitat to determine if any bats are present and to identify the need for any appropriate protective measures. This pre-construction roosting bat survey, consisting of a nighttime exit count and acoustic data collection, should be conducted during the bat maternity season (April 1 through August 31) well in advance of construction in order to provide adequate time for potential mitigation planning. To the greatest extent feasible, tree trimming/removal activities should be conducted outside the bat maternity season, which occurs from April 1 through August 31, to avoid direct impacts to nonvolant (flightless) young that may roost in trees within and adjacent to the Project site. If trimming or removal of trees during the bat maternity season (April 1 through August 31) cannot be avoided, a qualified biologist should monitor the tree removal or trimming activities.	Construction Contractor and Project Biologist	Pre-construction and during construction
BIO-3 Construction Lighting. No nighttime construction work should occur within 200 ft of Serrano Creek, and no construction lighting should be placed within 200 ft of Serrano Creek unless a qualified biologist confirms that the lighting does not illuminate Serrano Creek.	Construction Contractor and Project Biologist	During construction
BIO-4 Invasive Shot Hole Borers (ISHBs). A designated biologist familiar with the signs of ISHBs should survey trees on the Project site that are designated for removal or trimming. Surveys should be conducted at	Project Biologist	Pre-construction and during construction

Table 5.A: Mitigation and Monitoring Reporting Program

Mitigation Measures	Responsible Party	Timing for Mitigation Measure
<p>least 30 days prior to removal or trimming activities. If any tree is determined to be infested/infected by ISHBs, a control plan should be prepared and submitted to CDFW for review and approval. At a minimum, the control plan should include methods of control, removal, and appropriate disposal techniques to prevent the spread of ISHBs.</p>		
<p>4.5 Cultural Resources</p>		
<p>CUL-1 Cultural Resources. Prior to commencement of construction activities, Irvine Ranch Water District shall verify that the Project includes requirements specifying that if archaeological resources are discovered during excavation, grading, or construction activities, work shall cease within 50 feet (ft) of the find until a qualified archaeologist from the Orange County List of Qualified Archaeologists has evaluated the find in accordance with federal, State, and local guidelines to determine whether the find constitutes a “unique archaeological resource,” as defined in Section 21083.2(g) of the California Public Resources Code (PRC). Personnel of the proposed Project shall not collect or move any archaeological materials and associated materials. Construction activity may continue unimpeded on other portions of the Project site. The found deposits shall be treated in accordance with federal, State, and local guidelines, including those set forth in PRC Section 21083.2.</p>	<p>Construction Contractor and Project Archaeologist</p>	<p>During construction</p>
<p>CUL-2 Human Remains. In the unlikely event that human remains are encountered on the Project site, California Health and Safety Code 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to California PRC Section 5097.98. The County Coroner shall be notified immediately if any human remains are found. If the remains are determined to be prehistoric, the coroner shall notify the Native American Heritage Commission, which will determine and notify the Most Likely Descendant. With the permission of Irvine Ranch Water District (IRWD) or an authorized representative, the Most Likely Descendant may inspect the site of discovery. IRWD shall meet and confer with the Most Likely Descendant regarding their recommendations prior to disturbing the site with further construction activity.</p>	<p>Construction Contractor</p>	<p>During construction</p>
<p>4.6 Energy</p>		
<p>The proposed Project would not result in significant adverse impacts related to energy. No mitigation would be required.</p>		
<p>4.7 Geology and Soils</p>		
<p>PALEO-1 Paleontological Resources. In the event that paleontological resources are encountered, work in the immediate area of the discovery shall be halted, and Irvine Ranch Water District (IRWD) shall retain a professional paleontologist who meets the qualifications established by the Society of Vertebrate Paleontology to assess the discovery. The qualified professional paleontologist shall make recommendations regarding the treatment and disposition of the discovered resources, as well as the need for subsequent paleontological mitigation, which may include, but not be limited to, paleontological monitoring; collection of observed resources; preservation, stabilization, and identification of collected resources; curation of scientifically significant resources into a museum repository, and preparation of a</p>	<p>Construction Contractor and Project Paleontologist</p>	<p>During construction</p>

Table 5.A: Mitigation and Monitoring Reporting Program

Mitigation Measures	Responsible Party	Timing for Mitigation Measure
monitoring report of findings.		
4.8 Greenhouse Gas Emissions		
The proposed Project would not result in significant adverse impacts related to greenhouse gas emissions. No mitigation would be required.		
4.9 Hazards and Hazardous Materials		
Refer to Mitigation Measure TRA-1.		
4.10 Hydrology and Water Quality		
The proposed Project would not result in significant adverse impacts related to hydrology and water quality. No mitigation would be required.		
4.11 Land Use and Planning		
The proposed Project would not result in significant adverse impacts related to land use and planning. No mitigation would be required.		
4.12 Mineral Resources		
The proposed Project would not result in significant adverse impacts related to mineral resources. No mitigation would be required.		
4.13 Noise		
<p>NOI-1 Construction Noise. Prior to commencement of construction activities, Irvine Ranch Water District (IRWD) shall verify the proposed Project includes the following requirements to ensure that the greatest distance between noise sources and sensitive receptors during construction activities has been achieved:</p> <ul style="list-style-type: none"> • Construction activities occurring as part of the Project shall be subject to the limitations and requirements of the City of Lake Forest Municipal Code, which states that construction activities are prohibited between the hours of 8:00 p.m. and 7:00 a.m. on weekdays, including Saturday, or at any time on Sunday or a legal City of Lake Forest holiday. • During all project area excavation and on-site grading, the project contractors shall equip all construction equipment, fixed or mobile, with properly operating and maintained mufflers consistent with manufacturers' standards. • To the best extent possible, the project contractor shall place all stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest the Project area. • Construction staging areas shall be located as far away from sensitive receptors as possible during all phases of construction. 	IRWD	Pre-construction and during construction
4.14 Population and Housing		
The proposed Project would not result in significant adverse impacts related to population and housing. No mitigation would be required.		
4.15 Public Services		
The proposed Project would not result in significant adverse impacts related to public services. No mitigation would be required.		
4.16 Recreation		
The proposed Project would not result in significant adverse impacts related recreation. No mitigation would be required.		
4.17 Transportation		

Table 5.A: Mitigation and Monitoring Reporting Program

Mitigation Measures	Responsible Party	Timing for Mitigation Measure
<p>TRA-1 Construction Traffic Management Plan (CTMP). Prior to commencement of grading activities, Irvine Ranch Water District (IRWD) shall prepare a CTMP and shall ensure that the plan is implemented during construction with the goal of maintaining acceptable intersection level of service (LOS) during peak traffic hours and ensuring that construction traffic does not queue on public roadways. The CTMP shall be consistent with the current California Temporary Traffic Control Handbook (CATTCH). At a minimum, the CTMP shall include, but not be limited to, the following:</p> <ul style="list-style-type: none"> ● Provisions for temporary traffic control to improve traffic flow on public roadways and ensure the safe access into and out of the site (e.g., warning signs, lights and devices, and flag person). ● Prohibiting construction-related vehicles from parking on public streets. ● Providing safety precautions for pedestrians and bicyclists through such measures as alternate routing and protection barriers. ● Obtaining the required permits for truck haul routes from the City of Lake Forest. ● All emergency access to the Project site and adjacent areas shall be kept clear and unobstructed during all phases of demolition and construction. ● The Orange County Sheriff's Department and the Orange County Fire Authority (OCFA) shall be notified a minimum of 1 week (7 days) in advance of any lane closures or roadway work so that emergency vehicles can be rerouted during construction if deemed necessary in the expert opinion of the Orange County Sheriff's Department and/or OCFA. ● The Orange County Transportation Authority (OCTA) shall be notified regarding any affected locations a minimum of 10 working days prior to construction so that transit service can be rerouted if deemed necessary in the expert opinion of OCTA. 	IRWD	Pre-construction and during construction
4.18 Tribal Cultural Resources		
<p>TCR-1 Unknown Tribal Cultural Resources. Prior to the commencement of earthwork activities in sections that are outside of a previously ground-filled area, Irvine Ranch Water District (IRWD) shall provide written notification to the Native American representatives from the Gabrieleno Band of Mission Indians – Kizh Nation (“tribal representatives”) indicating the date of the commencement of earthwork activities. The tribal representatives shall be provided reasonable access to the Project site in a manner that does not interfere with the earthwork activities. Tribal representatives, at their own expense, and in a manner that does not interfere with earthwork activities, shall be allowed to observe subsurface ground-disturbing construction activities for the proposed pump station. If any tribal cultural resources are identified during the observation and if evidence is presented that the discovery proves to be potentially significant under the California Environmental Quality Act (CEQA), as determined by a qualified archaeologist, the tribal representatives, and the qualified archaeologist, in consultation with IRWD, shall determine the</p>	IRWD	During construction

Lake Forest Zone B To C Pump Station - South Coast AQMD Air District, Annual

Lake Forest Zone B To C Pump Station
South Coast AQMD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	2.28	1000sqft	0.05	2,284.00	0
Other Asphalt Surfaces	0.26	Acre	0.26	11,325.60	0
Other Non-Asphalt Surfaces	0.11	Acre	0.11	4,791.60	0

1.2 Other Project Characteristics

Urbanization	Urban	Wind Speed (m/s)	2.2	Precipitation Freq (Days)	31
Climate Zone	8			Operational Year	2023
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	CH4 Intensity (lb/MWhr)	0.029	N2O Intensity (lb/MWhr)	0.006

1.3 User Entered Comments & Non-Default Data

Lake Forest Zone B To C Pump Station - South Coast AQMD Air District, Annual

Project Characteristics -

Land Use - Pump Facility 1,784 sf plus estimated Surge Tank Pad 500 sf = 2,284 sf. Impervious surface total 0.31-acres. Site total 0.413-acres.

Construction Phase - Demo 1: Removal and capping of existing piping onsite. Trenching: represents off-site intertie work. Demo 2: Removal of the existing decommissioned pump station adjacent reservoir. Approximate construction over 12 month period.

Off-road Equipment -

Off-road Equipment -

Off-road Equipment - Demolition 1 removal of Well No. 5 infrastructure and capping of subterranean pipes.

Off-road Equipment - Demolition 2 removal of existing pump station adjacent to IRWD Zone B East Reservoir.

Off-road Equipment -

Off-road Equipment - Intertie construction would occur off-site after the new pump station is completed. Conservative estimate approach to construction equipment for intertie site.

Off-road Equipment -

Off-road Equipment -

Trips and VMT -

Demolition - Approximately 4 Tons of debris for removal per demolition phase.

Grading - 519 cy of imported soil per site plans. 350 cy of soil removed for intertie site.

Vehicle Trips - No employees would be present during operation. Only occasional service and inspection vehicles. Conservative estimate of 5 ADT.

Energy Use - No natural gas usage.

Construction Off-road Equipment Mitigation - Water exposed area at least three times daily as fugitive dust control measure.

Area Mitigation -

Stationary Sources - Emergency Generators and Fire Pumps - One 200 kW standby emergency generator (Approx 315 bhp). Routine maintenance and use estimate of 2 hours bi-weekly.

Lake Forest Zone B To C Pump Station - South Coast AQMD Air District, Annual

1.3 User Entered Comments & Non-Default Data

Lake Forest Zone B To C Pump Station - South Coast AQMD Air District, Summer

Project Characteristics -

Land Use - Pump Facility 1,784 sf plus estimated Surge Tank Pad 500 sf = 2,284 sf. Impervious surface total 0.31-acres. Site total 0.413-acres.

Construction Phase - Demo 1: Removal and capping of existing piping onsite. Trenching: represents off-site intertie work. Demo 2: Removal of the existing decommissioned pump station adjacent reservoir. Approximate construction over 12 month period.

Off-road Equipment -

Off-road Equipment -

Off-road Equipment - Demolition 1 removal of Well No. 5 infrastructure and capping of subterranean pipes.

Off-road Equipment - Demolition 2 removal of existing pump station adjacent to IRWD Zone B East Reservoir.

Off-road Equipment -

Off-road Equipment - Intertie construction would occur off-site after the new pump station is completed. Conservative estimate approach to construction equipment for intertie site.

Off-road Equipment -

Off-road Equipment -

Trips and VMT -

Demolition - Approximately 4 Tons of debris for removal per demolition phase.

Grading - 519 cy of imported soil per site plans. 350 cy of soil removed for intertie site.

Vehicle Trips - No employees would be present during operation. Only occasional service and inspection vehicles. Conservative estimate of 5 ADT.

Energy Use - No natural gas usage.

Construction Off-road Equipment Mitigation - Water exposed area at least three times daily as fugitive dust control measure.

Area Mitigation -

Stationary Sources - Emergency Generators and Fire Pumps - One 200 kW standby emergency generator (Approx 315 bhp). Routine maintenance and use estimate of 2 hours bi-weekly.

Lake Forest Zone B To C Pump Station - South Coast AQMD Air District, Summer

1.3 User Entered Comments & Non-Default Data

Lake Forest Zone B To C Pump Station - South Coast AQMD Air District, Winter

Project Characteristics -

Land Use - Pump Facility 1,784 sf plus estimated Surge Tank Pad 500 sf = 2,284 sf. Impervious surface total 0.31-acres. Site total 0.413-acres.

Construction Phase - Demo 1: Removal and capping of existing piping onsite. Trenching: represents off-site intertie work. Demo 2: Removal of the existing decommissioned pump station adjacent reservoir. Approximate construction over 12 month period.

Off-road Equipment -

Off-road Equipment -

Off-road Equipment - Demolition 1 removal of Well No. 5 infrastructure and capping of subterranean pipes.

Off-road Equipment - Demolition 2 removal of existing pump station adjacent to IRWD Zone B East Reservoir.

Off-road Equipment -

Off-road Equipment - Intertie construction would occur off-site after the new pump station is completed. Conservative estimate approach to construction equipment for intertie site.

Off-road Equipment -

Off-road Equipment -

Trips and VMT -

Demolition - Approximately 4 Tons of debris for removal per demolition phase.

Grading - 519 cy of imported soil per site plans. 350 cy of soil removed for intertie site.

Vehicle Trips - No employees would be present during operation. Only occasional service and inspection vehicles. Conservative estimate of 5 ADT.

Energy Use - No natural gas usage.

Construction Off-road Equipment Mitigation - Water exposed area at least three times daily as fugitive dust control measure.

Area Mitigation -

Stationary Sources - Emergency Generators and Fire Pumps - One 200 kW standby emergency generator (Approx 315 bhp). Routine maintenance and use estimate of 2 hours bi-weekly.

Lake Forest Zone B To C Pump Station - South Coast AQMD Air District, Winter

Subject: Biological Resources Assessment for the Lake Forest Zone B to C Pump Station Project

Dear Ms. Corey:

LSA has prepared this general assessment of the existing biological resources associated with the approximately 0.4-acre (ac) parcel (Assessor's Parcel Number 612-031-15) located between 20381 and 20411 Lake Forest Drive in Lake Forest, California. This biological resources assessment has been conducted to provide technical support as part of the environmental analysis and documentation for the proposed Lake Forest Zone B to C Pump Station Project (Project).

The Project site ranges in elevation from approximately 710 to 720 feet (ft) above mean sea level and is located at the site of the previous Irvine Ranch Water District (IRWD) Lake Forest Well No. 5. Adjacent land uses to the Project site include existing commercial/business park buildings and associated parking lots to the west and east, regional park/open space (i.e., Serrano Creek Trail) to the north, and a transportation corridor (i.e., Lake Forest Drive) to the south. The Project site is located in Section 12 of Township 6 South and Range 8 West on the 7.5-minute series United States Geological Survey (USGS) *El Toro, California* quadrangle (see Figure 1; all figures provided in Attachment B).

PROJECT OVERVIEW

IRWD proposes to construct a new pump station located between 20381 Lake Forest Drive and 20411 Lake Forest Drive at the previous Lake Forest Well No. 5 site in Lake Forest. The purpose of the proposed Project is to improve the water quality within IRWD's Zone B to C recycled water system by constructing a new recycled water pump station. In addition to the construction of the new Zone B to C Recycled Water Pump Station, the Project would include decommissioning the existing Zone B to C Pump Station, which is located adjacent to the existing IRWD Zone B East Reservoir. The proposed Project would also involve developing a new proposed intertie between the Upper Oso Reservoir and the Lake Forest Zone C distribution system. The new proposed intertie would provide the ability to isolate Upper Oso Reservoir from IRWD's recycled water distribution system.

METHODS

An LSA biologist reviewed key biological database records from the most current versions of the California Department of Fish and Wildlife (CDFW) California Natural Diversity Data Base (CNDDB), the California Native Plant Society (CNPS) Online Inventory of Rare and Endangered Vascular Plants

of California, and the United States Fish and Wildlife Service (USFWS) Information for Planning and Consultation (IPaC) database. LSA also reviewed the prior biological technical studies (GLA 2019) and environmental documentation (LSA 2019) pertaining to the Nakase Property Project located nearby on the other side of Serrano Creek. This technical information along with LSA's extensive experience in the vicinity of the proposed Project were used to assist in determining the existence or potential occurrence of any special-status plant and animal species¹ or sensitive natural communities in or immediately adjacent to the Project site.

During a site visit on December 7, 2020, LSA senior biologist Jim Harrison conducted a general assessment of the existing biological resources associated with the approximately 0.4 ac proposed Project site. The primary focus was to identify and document the occurrence of any biological resources (i.e., species and/or habitats) of particular interest or concern or the potential for occurrence of such resources that may not be detectable at the time of the site survey. This biological site survey was conducted on foot and included vegetation mapping. During the site assessment, existing plant and animal species were noted, and habitat was mapped and designated based on the Orange County Habitat Classification System (OCHCS) (Dames & Moore et al., 1992; Jones & Stokes Associates 1993). An aerial photograph showing the Project area was used in the field for orientation and mapping purposes. On-site conditions were cool and overcast with no wind and conducive to detection and observation of biological resources.

FINDINGS

Vegetation/Habitat

LSA identified three vegetation, or habitat, communities within the Project limits. These vegetation types include Disturbed/Barren (0.25 ac), Disturbed Eucalyptus Woodland (0.02 ac), and Ruderal (0.13 ac) (see Figure 2). There is no native habitat on site, although various individual native plants, including toyon (*Heteromeles arbutifolia*), laurel sumac (*Malosma laurina*), and coyote brush (*Baccharis pilularis* ssp. *consaguinea*) are scattered about the Project site. No sensitive natural communities occur within or adjoining the Project limits.

The Project site is composed of 0.25 ac of Disturbed/Barren area. These areas consist primarily of bare ground or cleared dirt pads. The previous IRWD well site, which is enclosed by a chain-link fence, is located within the Disturbed/Barren area. Also observed within this disturbed area was a pile of rocks, a utility box, a portable toilet, some orange snow fencing along a portion of the perimeter, and a track-out minimization grate at the entrance to the site. The area is essentially unvegetated, although Japanese honeysuckle (*Lonicera japonica*) grows on the chain-link fence, one laurel sumac and one toyon occur along the perimeter, and a small patch of Bermuda grass (*Cynodon dactylon*) is along the street parkway at the entrance to the site.

Ruderal vegetation types are shown on Figure 2 and consist primarily of annual, nonnative grasses and forbs, including wild oats (*Avena* spp.), bromes (*Bromus* spp.), smilo grass (*Piptatherum*

¹ "Special-status species" are those plants or animals that are federally and/or State listed, that are proposed for listing, or that have some other special designation from a resource agency or a recognized conservation organization (e.g., CNPS).

miliaceum), sweet clover (*Melilotus* sp.), blue periwinkle (*Vinca major*), telegraph weed (*Heterotheca grandiflora*), and scattered individuals of toyon, laurel sumac, coyote brush and various small ornamental shrub/subshrubs. Trash and debris was observed in the Ruderal habitat, primarily along the chain-link fence.

A small quantity (0.02 ac) of Disturbed Eucalyptus Woodland is located along the northern edge of the Project site (see Figure 2). This habitat type consists primarily of an overstory dominated by red river gum (*Eucalyptus camaldulensis*) with a Ruderal understory. Most of the bird activity on site was associated with the eucalyptus trees.

Wildlife

The wildlife observed on site during the site survey consist of species typically found in developed residential and commercial areas and well adapted to human disturbances. Animal species observed included American crow (*Corvus brachyrhynchos*), house finch (*Haemorhous mexicanus*), lesser goldfinch (*Spinus psaltria*), bushtit (*Psaltriparus minimus*), black-chinned hummingbird (*Archilochus alexandri*), Anna's hummingbird (*Calypte anna*), and white-crowned sparrow (*Zonotrichia leucophrys*). A Cooper's hawk (*Accipiter cooperii*) was observed flying across Lake Forest Drive and over the adjacent commercial business park to the north in the direction of Serrano Creek. A solitary coyote (*Canis latrans*) was observed off site walking nearby along the Serrano Creek Trail. It is not uncommon to see both Cooper's hawk and coyote in developed residential and commercial areas.

Serrano Creek is approximately 100 ft northwest of the Project site, and Serrano Creek Trail, which is located between Serrano Creek and the Project site, is approximately 50 ft from the site. The creek and the associated trail support wildlife movement, as would be expected and is typical in these situations. This was evident during the site survey when a coyote was observed walking along Serrano Creek Trail before running into the creek when a man walking his dog on the trail approached the coyote. However, the Project site, being bracketed on three sides by existing development, is not expected to support wildlife movement.

While the Project site has trees, shrubs, and sufficient ground cover suitable for nesting birds, most birds, particularly raptor species, are more likely to nest in the more densely forested areas associated with the nearby creek and trail. No active nesting by birds was observed on site or in the adjacent habitat. However, vegetated areas on site along with the habitat associated with Serrano Creek and the Serrano Creek Trail are suitable for foraging birds. The same is expected to be true for any bats present in the vicinity of the Project. Bat species may forage on site and in surrounding areas, particularly Serrano Creek, but bats are more likely to roost and possibly even breed in the trees associated with the creek.

Special-Status Species

Although several special-status plant species were identified in the records searches and literature review as occurring or potentially occurring in the Project vicinity and surrounding areas, there are no special-status plant species within or adjoining the Project limits.

Of the special-status animal species identified in the records searches and literature review, none were observed on site at the time of the site survey. However, while it is more likely that certain

special-status bats (i.e., western mastiff bat [*Eumops perotis californicus*] and western red bat [*Lasiurus blossevillii*]) and raptors (i.e., Cooper's hawk and white-tailed kite [*Elanus leucurus*]) may roost/nest in the more densely forested areas of the nearby Serrano Creek and Serrano Creek Trail, these species could potentially forage within the vegetated areas on site. However, since the existing conditions associated with the Project site are highly disturbed and degraded and the quantity of impacts small, the loss of potential foraging habitat would not be considered substantial.

In 2017, Glenn Lukos Associates detected willow flycatcher (*Empidonax traillii*), which is State listed as Endangered, and yellow warbler (*Setophaga petechia*), a State Species of Special Concern, in Serrano Creek, and Cooper's hawk and red-tailed hawk (*Buteo jamaicensis*) are reported to have previously nested in Serrano Creek (GLA 2019). Neither willow flycatcher nor yellow warbler are expected to nest on site.

POTENTIAL PROJECT IMPACTS

No special-status plant species are present within the project site limits. Since the project would not result in impacts to such resources, no mitigation would therefore be required. However, while some bat species (e.g., western mastiff bat and western red bat) and raptors (e.g., Cooper's hawk) may potentially forage on site, the loss of this small quantity of disturbed habitat is not likely to result in a substantial adverse impact to these species. Therefore, the proposed project would not result in a direct significant impact to any special-status species and/or habitat supporting any special-status species, and any potential indirect impacts to such resources occurring off site is expected to be less than significant.

Riparian habitat associated with Serrano Creek is located adjacent to the project site. However, the project would not result in the removal of, or other direct impacts to, this riparian habitat or any other sensitive natural communities. Therefore, no mitigation would be required. Indirect impacts due to noise and vibration disturbances during construction work could potential disrupt or otherwise impact bat roosting and/or bird nesting activities in adjacent habitat associated with Serrano Creek, which is approximately 100 ft from the Project site. However, implementation of the bat and nesting bird measures identified in the Recommendations section below would reduce potential impacts to roosting bats and/or nesting birds to less than significant levels.

Although Serrano Creek is located approximately 100 ft from the project site, there are no jurisdictional wetlands or other State and/or federally regulated waterbodies within or adjoining the Project site. As a result, the project would not impact any jurisdictional waterbodies, including wetlands. Therefore, no mitigation would be required.

While wildlife do use Serrano Creek and the Serrano Creek Trail for movement purposes, the project would not substantially interfere with wildlife movement in the vicinity of the project site. Artificial lighting during construction activities could potentially impede or alter wildlife movement activities; however, with implementation of the measure provided in the Recommendation section below, impacts to wildlife movement would be reduced to less than significant levels.

The proposed project is not expected to conflict with any local policies or ordinances protecting biological resources. In compliance with the Lake Forest Municipal Code (Section 6.20.025), if any

eucalyptus trees on the Project site are to be removed or trimmed between April 1 and November 1, the Project applicant/developer must first obtain a permit from the City of Lake Forest (City) for the transportation of any logs, branches, or trunks to an off-site location for disposal. In addition, the removal and/or trimming of trees could inadvertently result in the spread of Invasive Shot Hole Borers (ISHBs), if present in the trees to be removed or trimmed. However, implementation of the measure identified below under Recommendations would reduce the potential impact to a less than significant level.

The project site is not within or adjacent to any designated Natural Community Conservation Plan (NCCP) or other Habitat Conservation Plan (HCP) area, and the project would not adversely affect any conservation plan areas in the region. Therefore, no mitigation would be required.

The City of Lake Forest is a participant in the Orange County Central and Coastal NCCP/HCP. Although the Project site is located within the NCCP/HCP Planning Area, the site is located outside the boundaries of the NCCP/HCP Reserve System. The Project site is approximately 0.8 mile from the closest NCCP/HCP Reserve boundary; however, it is located in an area identified in the NCCP/HCP as urbanized and designated for development. Development of the proposed Project would not result in the removal of any sensitive habitat identified in the NCCP/HCP and would not conflict with the adopted NCCP/HCP or any other approved local, regional, or State HCP. Therefore, the proposed Project would not adversely affect any conservation plan areas in the region, and no mitigation would be required.

RECOMMENDATIONS

Potential direct and indirect impacts to biological resources associated with Project construction and/or operation would be reduced to levels that are less than significant with implementation of the following recommended measures:

- In the event that any construction, vegetation clearing, or grading activities (including disking and demolition) should occur between February 1 and September 1, a qualified biologist should conduct a nesting bird survey within 3 days of commencement of construction activities to confirm the absence of nesting birds. If active nesting of birds is observed within 500 ft of the designated construction area during surveys, the biologist will determine suitable buffers around the active nests (e.g., a minimum of 50 ft for passerines and 250 ft for raptors). The buffer areas must be avoided until the nests are no longer occupied and the juvenile birds can survive independently from the nests. Prior to commencement of grading activities, the City's Director of Community Development, or designee, should verify that all Project grading and construction plans include specific documentation of compliance with the Migratory Bird Treaty Act (MBTA) and California Fish and Game Code Section 3503. This would include completion of pre-construction survey reports that have been reviewed by staff, and verification that appropriate buffers (if needed) have been noted on the plans and established in the field using orange snow fencing.
- A qualified bat biologist should conduct a pre-construction roosting bat survey of the Project site and adjacent habitat to determine if any bats are present and to identify the need for any appropriate protective measures. This pre-construction roosting bat survey, consisting of a

nighttime exit count and acoustic data collection, should be conducted during the bat maternity season (April 1 through August 31) and well in advance of construction in order to provide adequate time for potential mitigation planning. To the greatest extent feasible, tree trimming/removal activities should be conducted outside the bat maternity season, which occurs from April 1 through August 31, to avoid direct impacts to nonvolant (flightless) young that may roost in trees within and adjacent to the Project site. This period also occurs within the bird nesting season (February 1 to September 1). If trimming or removal of trees during the bat maternity season (April 1 through August 31) cannot be avoided, a qualified biologist should monitor the tree removal or trimming activities.

- A designated biologist familiar with the signs of ISHBs should survey trees on the Project site that are designated for removal or trimming. Surveys should be conducted at least 30 days prior to removal or trimming activities. If any tree is determined to be infested/infected by ISHBs, a control plan should be prepared and submitted to the CDFW for review and approval. At a minimum, the control plan should include methods of control, removal, and appropriate disposal techniques to prevent the spread of ISHBs. The results of the tree survey, and if warranted, a copy of the CDFW-approved control plan should be submitted to the City of Lake Forest Director of Community Development, or designee, prior to issuance of grading permits.
- No nighttime construction work should occur within 200 ft of Serrano Creek, and no construction lighting should be placed within 200 ft of Serrano Creek unless a qualified biologist confirms that the lighting does not illuminate Serrano Creek. This would help avoid impacts to nocturnal wildlife using Serrano Creek and the Serrano Creek Trail during nighttime hours.

Should you have any questions regarding the contents of this biological resources assessment report, please contact me at (949) 535-2217 or jim.harrison@lsa.net.

Sincerely,

APPENDIX C

CULTURAL RESOURCES STUDY FOR THE LAKE FOREST ZONE B TO C PUMP STATION PROJECT IN LAKE FOREST, ORANGE COUNTY, CALIFORNIA

This page intentionally left blank

MEMORANDUM

DATE: December 14, 2020

To: Irvine Ranch Water District

FROM: Kerrie Collison, RPA, Associate/Senior Cultural Resources Manager, LSA

SUBJECT: Cultural Resources Study for the Lake Forest Zone B to C Pump Station Project in Lake Forest, Orange County, California (LSA Project No. IRW2001.01)

This memorandum presents the results of the cultural resources study for the proposed Lake Forest Zone B to C Pump Station Project (project) in Lake Forest, Orange County, California. The study consisted of a record search and field survey. The record search was conducted to do the following: (1) establish the status and extent of previously recorded sites, surveys, and excavations in and adjacent to the project site; and (2) note what site types might be expected to occur within the project site based on the existing data from archaeological sites located within 0.25 mile (mi) of the project site. All work has been completed per the requirements of the California Environmental Quality Act of 1970 (CEQA). The Irvine Ranch Water District (IRWD) is the Lead Agency for CEQA compliance.

PROJECT DESCRIPTION AND LOCATION

The proposed project's purpose is to improve the water quality within IRWD's Zone B to C recycled water system by constructing a new recycled water pump station. In addition to the construction of the new Zone B to C Recycled Water Pump Station, the proposed project would decommission the existing Zone B to C Pump Station, located adjacent to the existing IRWD Zone B East Reservoir. The proposed project would also develop a proposed new intertie between the Upper Oso Reservoir and the Lake Forest Zone C distribution system. The proposed new intertie would provide the ability to isolate the Upper Oso Reservoir from IRWD's recycled water distribution system.

The proposed new pump station would be located on a 0.413-acre site (Assessor's Parcel No. 612-031-15) between 20411 and 20381 Lake Forest Drive. The existing pump station is located off a paved road running north from Regency Lane, and the proposed new intertie is located along the southbound side of Portola Parkway just north of its intersection with El Toro Road. The proposed project is depicted on the *El Toro, California* 7.5-minute United States Geological Survey (USGS) topographic quadrangle map in unsectioned land of the Los Alisos Land Grant in Township 6 South, Range 7 West and Range 8 West, San Bernardino Baseline and Meridian (USGS 1982; Attachment B).

Ground-disturbance for the proposed new pump station would extend to a depth of approximately 3 feet (ft) for the footings for the building and the retaining wall. Activities associated with the removal of the existing pump station would not involve excavation. Excavation for the proposed new intertie would extend to a depth of approximately 6.5 ft and involve the removal of approximately 370 cubic yards (cy) of material (personal communication, Stantec Consulting Services, Inc. [Stantec] November 2020).

RECORD SEARCH

On December 4, 2020, Michelle Galaz, Assistant Coordinator at the South Central Coastal Information Center (SCCIC), conducted a record search at the SCCIC of the California Historical Resources Information System (CHRIS) at California State University, Fullerton. The SCCIC, an affiliate of the California Office of Historic Preservation (OHP), is the official repository of cultural resources records and reports for Orange County. The record search included a review of all recorded historic-period and prehistoric cultural resources within a 0.25 mi radius of the project site, as well as a review of known cultural resources surveys and excavation reports. The record search also included a review of the following State and federal inventories:

- Built Environment Resources Directory (BERD)
- California Historical Landmarks (OHP 1996)
- California Points of Historical Interest (OHP 1992)
- *Five Views: An Ethnic Historic Site Survey for California* (OHP 1988)
- California Inventory of Historic Resources (OHP 1976)

Record Search Results

The record search results (Attachment C) indicate that eight previous cultural resources studies have included the project site. The eight studies include archaeological survey (4), literature search (1), archaeological testing (1), and monitoring (2). The two project component locations with proposed ground disturbance (the proposed new pump station and proposed intertie locations) have been monitored for archaeological resources during previous ground-disturbing activities with negative findings for cultural resources (Brock 1991; Gust 1999). There have been 20 additional studies conducted within 0.25 mi of the project site. These 20 studies have included surveys (15), archaeological excavation (1), monitoring (3), and a record search (1).

The record search was negative for cultural resources within the project site. There have been 11 precontact archaeological resources previously recorded within 0.25 mi of the project site.

ARCHAEOLOGICAL FIELD SURVEY

On December 7, 2020, LSA Archaeologist Aaron McCann conducted a pedestrian survey of the project site. The survey focused on the proposed pump station and the intertie locations. The existing pump station location was not surveyed because the work area is paved and no excavation is proposed. The proposed pump station location is situated between two existing commercial developments to the north and south, Lake Forest Drive to the east, and Serrano Creek Trail to the west. The eastern two-thirds of this location exhibited 100 percent ground visibility and consisted of a graded pad with compacted fill and gravel. The other portion of the proposed pump station location had less than 10 percent ground visibility and was a landscaped slope with no native sediments visible. The intertie location was situated in a landscaped portion of a shopping center that is bordered by Portola Parkway to the west. Ground visibility at the intertie location was less than 10 percent, and no native sediment was visible due to landscaping. No archaeological resources were identified during the field survey.

SUMMARY AND RECOMMENDATIONS

The cultural resources study, consisting of a record search and a field survey, did not identify archaeological cultural resources within the project site. There have been 11 precontact archaeological resources previously recorded within 0.25 mi of the project site; however, the two project component locations with proposed ground disturbance (i.e., the proposed new pump station and proposed intertie locations) have been monitored for archaeological resources during previous ground-disturbing activities with negative findings for cultural resources (Brock 1991; Gust 1999). Given the previous disturbance of the project site and the negative findings during archaeological monitoring of the previous ground disturbance, the likelihood of encountering subsurface archaeological cultural resources during ground-disturbing construction activities is low.

No additional cultural resource studies are recommended for the proposed project. In the unlikely event that cultural resources are encountered during project activities, contractors should stop work within 50 ft of the find and contact a qualified professional archaeologist (such as a Registered Professional Archaeologist) to assess the nature and significance of the find and determine if future monitoring is appropriate. If deemed appropriate, monitoring should continue until excavation is complete, or until the qualified archaeologist, based on field observations, is satisfied there is no likelihood of encountering intact archaeological deposits. Upon completion of any monitoring activities, the archaeologist should prepare a report to document the methods and results of monitoring activities. This report should be submitted to the SCCIC.

If human remains are encountered, the regulatory process outlined in Health and Safety Code Section 7050.5 must be followed, which involves coordination with the Native American Heritage Commission and a Native American Most Likely Descendant.

If you have any questions concerning the content or the intent of this memorandum, please contact me at kerrie.collison@lsa.net or (805) 782-0745.

APPENDIX D

PALEONTOLOGICAL ANALYSIS OF THE LAKE FOREST ZONE B TO C PUMP STATION PROJECT

This page intentionally left blank

MEMORANDUM

DATE: December 11, 2020

To: Nicole Dubois, Principal, LSA

FROM: Sarah Rieboldt, Ph.D., Associate/Senior Paleontologist, LSA

SUBJECT: Paleontological Analysis of the Lake Forest Zone B to C Pump Station Project, Lake Forest, Orange County, California

INTRODUCTION

This memorandum was prepared to ensure that the proposed Lake Forest Zone B to C Pump Station Project (Project) in Lake Forest, Orange County, California, is in compliance with all applicable State and City of Lake Forest (City) regulations and requirements regarding paleontological resources, as well as the standards of the Society of Vertebrate Paleontology (SVP, 2010). The applicable regulations and requirements include the California Environmental Quality Act (CEQA): Public Resources Code (PRC) Division 13, Chapter 2.6; the *State CEQA Guidelines*: California Code of Regulations, Title 14, Chapter 3, Appendix G; PRC §5097.5; and the City General Plan, Policy RR-3 (City of Lake Forest, 2020). This memorandum addresses the potential for the proposed Project to impact paleontological resources and includes mitigation measures and other recommendations to minimize these impacts, if needed. The Irvine Ranch Water District (IRWD) is the Lead Agency for CEQA compliance.

PROJECT DESCRIPTION AND LOCATION

The purpose of the proposed Project is to improve the water quality within IRWD’s Zone B to C recycled water system by constructing a new recycled water pump station. In addition to the construction of the new Zone B to C Recycled Water Pump Station, the proposed Project would decommission the existing Zone B to C Pump Station, located adjacent to the existing IRWD Zone B East Reservoir. The proposed Project would also develop a proposed new intertie between the Upper Oso Reservoir and the Lake Forest Zone C distribution system. The proposed new intertie would provide the ability to isolate Upper Oso Reservoir from IRWD’s recycled water distribution system.

The proposed new pump station would be located on a 0.413-acre site (Assessor’s Parcel No. 612-031-15) between 20411 and 20381 Lake Forest Drive. The existing pump station is located off a paved road running north from Regency Lane, and the proposed new intertie is located along the southbound side of Portola Parkway just north of its intersection with El Toro Road. Figure 1 (Attachment B) depicts the location of all three components of the proposed Project on the *El Toro*

7.5-minute United States Geological Survey (USGS) topographic quadrangle map in unsectioned land of the Los Alisos Land Grant (USGS, 1982).

Proposed Facilities

New Lake Forest Zone B to C Pump Station

The proposed new Lake Forest Zone B to C Pump Station would be located on the site where Lake Forest Well No. 5 was previously located and would be designed to supply Zone B recycled water to Zone C as a closed-loop system. The proposed pump station would have a maximum capacity of 2,250 gallons per minute (gpm) at 124 feet (ft) of total dynamic head. The proposed pump station would include variable-speed pumps with a pumping range from essentially 0 gpm to the full flow of 2,250 gpm, a magnetic flow meter, a pressure relief valve, a motor control center, variable-frequency drives, instrumentation and controls, a standby emergency generator, and related equipment. The proposed pumping facilities would be operated on a minimum pressure requirement of 110 pounds per square inch (psi) at the pump station discharge and engage parallel pumps in series to meet system flow demands.

Demolition of Existing Lake Forest Zone B to C Pump Station

The demolition of the existing Lake Forest Zone B to C Pump Station would occur after the construction of the new pump station. The items to be demolished include the majority of the exposed piping, valves, fittings, gauges, sensors, pumps, bases, and pipe stands. The pump bases and any other raised concrete surfaces would be left in place. The Zone B suction piping from the existing Zone B East Reservoir would be cut back and equipped with a flushout. The Zone C discharge piping would be cut back and equipped with a blind flange and an air and vacuum relief valve. The motor control center (MCC) and remote terminal unit (RTU) cabinets would be protected in place until the relocation of the equipment critical to the Zone B East Reservoir has been completed. The existing retaining wall and fence would be protected in place.

Santa Margarita Water District Intertie

Currently, IRWD's Zone C recycled water system is floated on the Santa Margarita Water District (SMWD) Upper Oso Reservoir to maintain operational pressure. After the construction of the proposed new pump station, Zone C would typically be isolated from the Upper Oso Reservoir and operate as a closed-loop system. IRWD would maintain an operational connection with the Oso Reservoir and construct a new meter located along Portola Parkway, between El Toro Road and Saddleback Parkway. The proposed intertie would be closed during normal operations but is available to augment recycled water supplies into the IRWD Lake Forest Zone C system during maintenance operations of the IRWD system or in response to a call from SMWD for IRWD to provide recycled water flows into the Upper Oso Reservoir. The proposed intertie would also be used by IRWD to deliver excess recycled water flow to SMWD during low demand periods.

Excavation Parameters

Excavation for the proposed new pump station would extend to a depth of approximately 3 ft for the footings for the building and the retaining wall (Stantec, 2020). Activities associated with the removal of the existing pump station would not involve excavation (Stantec, 2020). Excavation for

the proposed new intertie would extend to a depth of approximately 6.5 ft (IRWD, 2020) and involve the removal of approximately 370 cubic yards (cy) of material (Stantec, 2020).

METHODS

LSA examined geologic maps of the Project site and reviewed relevant geological and paleontological literature to determine which geologic units are present in the Project site and whether fossils have been recovered in the Project site or from similar geologic units elsewhere in the region. A search for known fossil localities was also conducted through the Natural History Museum of Los Angeles County (NHMLA) in order to determine the status and extent of previously recorded paleontological resources within and surrounding the Project site. On December 7, 2020, a pedestrian field survey of the new pump station and the intertie portions of the Project site was conducted. As the portion of the Project site that includes the existing pump station is completely paved, a survey of that portion was not warranted or conducted.

RESULTS

Literature Review

The Project site is in the northern Peninsular Ranges Geomorphic Province, a 900-mile (mi) long northwest–southeast trending structural block that extends from the Transverse Ranges in the north to the tip of Baja California in the south and includes the Los Angeles Basin (California Geological Survey, 2002; Norris and Webb, 1976). The total width of this province is 225 mi, extending from the Colorado Desert in the east, across the continental shelf, to the Southern Channel Islands (Santa Barbara, San Nicolas, Santa Catalina, and San Clemente) in the west (Sharp, 1976). This province is characterized by a series of mountain ranges and valleys that trend in a northwest–southeast direction roughly parallel to the San Andreas Fault Zone (Norris and Webb, 1976; Sharp, 1976). It contains extensive pre-Cenozoic (more than 66 million years ago [Ma]) igneous and metamorphic rocks covered by a veneer of Cenozoic (66 Ma to Present) sedimentary deposits (Norris and Webb, 1976).

Geologic mapping by Morton and Miller (2006) indicates that the Project site contains Young Alluvial Fan Deposits, Very Old Axial Channel Deposits, and the Capistrano Formation (Figure 2). The draft geotechnical report prepared for this proposed Project also noted Artificial Fill in the Project site where the proposed new pump station would be located (Kleinfelder, 2020). Moreover, Artificial Fill is likely present in the portion of the Project site where the existing pump station is located as this area is previously developed and paved. These geologic units and their relative paleontological sensitivities are described in more detail below. The dates for the geologic time intervals are based on the International Chronostratigraphic Chart prepared by the International Commission on Stratigraphy (Cohen et al., 2020).

Artificial Fill

Artificial Fill consists of sediments that have been removed from one location and transported to another by human activity rather than by natural means. The transportation distance can vary from a few feet to many miles, and composition is dependent on the source and purpose. Artificial Fill will sometimes contain modern debris such as asphalt, wood, bricks, concrete, metal, glass, plastic, and

even plant material. While Artificial Fill may contain fossils, these fossils have been removed from their original location and are thus out of stratigraphic context. Therefore, they are not considered important for scientific study, and Artificial Fill has no paleontological sensitivity. In borings conducted for the draft geotechnical report for this proposed Project, Kleinfelder (2020) noted Artificial Fill in the area of the new pump station extending from the surface to depths of 4 to 6 ft. Artificial Fill was noted during the field survey at the location of the proposed new pump station and at the location of the proposed new intertie.

Young Alluvial Fan Deposits

The Young Alluvial Fan Deposits are Holocene to late Pleistocene in age (less than 129,000 years ago) and consist of unconsolidated silt, sand, and gravel (Morton and Miller, 2006). Cobble- and boulder-size clasts are also present and become more abundant closer to the hills and mountains (Morton and Miller, 2006). These sediments were eroded from higher elevations, carried by flooding streams and debris flows, and deposited in a fan or lobe shape at the base of the hills. They show slight to moderate dissection by erosional gullies (Morton and Miller, 2006). In one boring for the draft geotechnical report prepared for this proposed Project, the Young Alluvial Fan Deposits were noted beneath Artificial Fill beginning at a depth of approximately 6 ft in the northeastern portion of the area where the new pump station will be constructed (Kleinfelder, 2020).

Although Holocene (Present to 11,700 years ago) deposits can contain remains of plants and animals, only those from the middle to early Holocene (4,200 to 11,700 years ago) are considered scientifically important (SVP, 2010), and fossils from this time interval are not very common. However, the older, Pleistocene deposits in these geologic units have produced scientifically important fossils elsewhere in the region (Jefferson 1991a, 1991b; Miller 1971; Reynolds and Reynolds 1991; Springer et al. 2009). These older, Pleistocene deposits span the end of the Rancholabrean North American Land Mammal Age (NALMA), which dates from 11,000 to 240,000 years ago (Sanders et al., 2009) and was named for the Rancho La Brea fossil site in central Los Angeles. The presence of *Bison* defines the beginning of the Rancholabrean NALMA (Bell et al. 2004), but fossils from this time also include other large and small mammals, reptiles, fish, invertebrates, and plants (Jefferson 1991a, 1991b; Miller 1971; Reynolds and Reynolds 1991; Springer et al. 2009). There is a potential to find these types of fossils in the older sediments of this geologic unit, which may be encountered below a depth of approximately 10 ft. Therefore, these geologic units are assigned a low paleontological sensitivity above a depth of 10 ft and a high sensitivity below that mark.

Very Old Axial Channel Deposits

The Very Old Axial Channel Deposits formed during the middle to early Pleistocene (129,000 years ago–2.58 Ma) (Morton and Miller, 2006) from sediment carried by rivers and streams down the mountains. These deposits are reddish-brown in color and predominantly composed of sand with local layers of gravel, pebbles, silt, and clay (Morton and Miller, 2006). They are moderately to well consolidated and have been dissected by erosional gullies (Morton and Miller, 2006). In one boring for the draft geotechnical report prepared for this proposed Project, the Very Old Axial Channel Deposits were noted beneath Artificial Fill beginning at a depth of approximately 4 ft in the southwestern portion of the area where the new pump station will be constructed (Kleinfelder, 2020).

These deposits formed during an interval that spans three NALMAs: the Rancholabrean, the Irvingtonian, and the Blancan and (Bell et al., 2004; Sanders et al., 2009). Fossils are known in similar Rancholabrean, Irvingtonian, and Blancan deposits from excavations for roads, housing developments, and quarries, as well as scientific investigations within the Southern California area (Bell et al., 2004; Miller, 1971; Pajak et al., 1996). These fossils include mammoths, mastodons, horses, camels, saber-toothed cats, coyotes, deer, peccaries, and sloths, as well as smaller animals like rodents, rabbits, birds, reptiles, and fish. As such, these deposits are considered to have high paleontological sensitivity.

Capistrano Formation, Oso Member

The marine Capistrano Formation in this area has two facies: (1) a sandstone facies formally named the Oso Member; and (2) a siltstone facies (Morton and Miller, 2006). The two facies are laterally equivalent and represent deposition in different environments: the siltstone member in deeper water farther offshore, and the Oso Member in shallower water closer to shore. Only the Oso Member is mapped within the Project site in the area of the existing pump station.

The Oso Member has been dated to the early late Hemphillian NALMA (5.8–6.6 Ma) (Barboza et al., 2017) and consists of white to pale yellowish-gray, friable, crudely bedded to massive, medium- to coarse-grained, feldspathic sandstone (Morton and Miller, 2006; Schoellhamer et al., 1981). In places, scattered matrix-supported pebbles and cobbles and shaly silt interbeds are present (Morton et al., 1976; Schoellhamer et al., 1981).

Schoellhamer et al. (1981) report that the Oso Member has produced whale bones, shark teeth, and echinoderms. During excavation for the Foothill Ranch Project in the foothills of the Santa Ana Mountains, a variety of scientifically important vertebrate fossils were recovered, including a rare partial skeleton of dolphin, as well as mollusc, bryozoan, echinoderm, shrimp, crocodile, whale, sea lion, bony fish, and rhinoceros remains (Sundberg, 1991). Another development project in the Santa Ana foothills produced a rare, nearly complete skull of the extant blue marlin, *Makaira nigricans* (Fierstine, 2008). And construction of two segments of State Route 241, between Bake Parkway and El Toro Road and from Bake Parkway to Portola Parkway North, produced some of the most diverse and important fossils (Minch and Hull, 1993; Minch and Leslie, 1994). Finds from these projects included algae, leaves and wood fragments from several plant genera, bivalves, gastropods, echinoids, sharks and rays, bony fish, sea turtles, toothed and baleen whales, sea cows, seals and/or sea lions, walrus, dolphins, horses, camels, elephants, and birds. These collections include one of the most complete specimens of an extinct walrus (Minch and Leslie, 1994). Based on the quality, quantity, and variety of fossils recovered from the Oso Member of the Capistrano Formation, this geologic unit has high paleontological sensitivity.

Fossil Locality Search

The fossil locality search through the NHMLA indicated that no fossil localities are present within the boundaries of the Project site. However, this search noted multiple fossil localities near the Project site from the Capistrano Formation. Fossils found from these localities include seals (including Otariidae and Imagitariinae), whales (Cetacea, Mysticeti, and *Herpetocetus*), dolphins (Pontoporiidae), and horse (*Equus*), as well as fish (Osteichthyes) and various marine invertebrates. A copy of the fossil locality search results through the NHMLA is included in Attachment C.

Field Survey

The location for the proposed new pump station consists of a flat, rectangular lot with a dirt parking lot in the southeastern portion, overgrown vegetation in the northwestern portion, and a fenced and gated area with an exposed water pipe in the central portion. Visibility was excellent (approximately 95 percent) in the southeastern and central portions, where a few areas were obscured by piles of gravel, trash, a plastic tarp, and minor vegetation. In the northwestern portion, the substantial grasses, weeds, and overgrown trees and shrubs completely obscured the ground surface. Where visible, the sediments consisted of light gray, tan, and light reddish-brown silty sand intermixed with gravel, indicative of Artificial Fill.

The intertie location consists of a flat, rectangular area with substantial landscaping and one exposed pipe. Visibility was extremely poor at approximately 1 percent due to the presence of vegetation, mulch, and the sidewalk. Where visible, sediments consisted of light gray to tan silty sand with sparse gravel, indicative of Artificial Fill.

No paleontological resources were noted at either the location of the proposed new pump station or the proposed new intertie.

CONCLUSIONS AND RECOMMENDATIONS

The Project site contains Artificial Fill, which has no paleontological sensitivity; Young Alluvial Fan Deposits, which have low paleontological sensitivity from the surface to a depth of 10 ft and high paleontological sensitivity below that mark; and Very Old Axial Channel Deposits and the Oso Member of the Capistrano Formation, both of which have high paleontological sensitivity. However, excavation for this proposed Project is expected to be limited in terms of location, as well as vertical and horizontal extent. At the existing pump station, which is the only place where the Oso Member of the Capistrano Formation is mapped, there will be no excavation. At the proposed new intertie location, excavation is expected to extend to a depth of 6.5 ft and remove only 370 cy. At the proposed new pump station, excavation for the building and retaining wall will extend to a depth of 3 ft, but those facilities appear to be located in the area mapped with Young Alluvial Fan Deposits. Therefore, the only activity that has the potential to impact paleontological resources is in the area of the intertie; however, as noted above, this activity is limited in depth and extent, making the potential for paleontological resources to be present and impacted by Project development very low. As such, LSA recommends the following mitigation measure in the unlikely event that paleontological resources are noted during the course of Project development:

PALEO-1 In the event that paleontological resources are encountered, work in the immediate area of the discovery shall be halted, and the Irvine Ranch Water District (IRWD) shall retain a professional paleontologist who meets the qualifications established by the Society of Vertebrate Paleontology to assess the discovery. The qualified professional paleontologist shall make recommendations regarding the treatment and disposition of the discovered resources, as well as the need for subsequent paleontological mitigation, which may include, but not be limited to, paleontological monitoring; collection of observed resources; preservation, stabilization, and

identification of collected resources; curation of scientifically significant resources into a museum repository, and preparation of a monitoring report of findings.

Implementation of Mitigation Measure PALEO-1 will ensure that Project impacts on paleontological resources will be reduced to a level that is less than significant.

LSA Associates, Inc
Attn: Sarah Rieboldt

re: Paleontological resources for the Lake Forest Zone B to C Pump Station Project (IRW2001.01)

Dear Sarah:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for proposed development at the Lake Forest Zone B to C Pump Station project area as outlined on the portion of the El Toro USGS topographic quadrangle map that you sent to me via e-mail on November 4, 2020. We do not have any fossil localities that lie directly within the proposed project area, but we do have fossil localities nearby from the same sedimentary deposits that occur in the proposed project area, either at the surface or at depth.

The following table shows the closest known localities in the collection of the Natural History Museum of Los Angeles County.

Locality Number	Location	Formation	Taxa	Depth
LACM VP 5500	east of Lake Forest Drive between Vintage Road on the north & Pittsford Drive on the south	Capistrano Fm	Seals (Pinnipedia)	unknown
LACM VP 7370 - 7372	Foothill Gateway; NW of the intersection of Portola Pkwy & El Toro Rd	Capistrano Formation (fine to coarse grained white sandstone)	Baleen whales (<i>Mysticeti</i> and <i>Herpetocetus</i>); horse (<i>Equus</i>); unidentified mammal (Mammalia); fish (Osteichthyes)	Unknown (collected during grading for Foothill Gateway development)
LACM IP 4987	Along the bank of Aliso Creek, near the intersection of El Torro Rd and Hwy 241	Capistrano Formation (concretionary gray siltstone)	Marine invertebrates	surface
LACM VP 4177	Along tributary stream of Aliso	Capistrano Formation (slightly	Unidentified mammals (Mammalia)	in creek bank

	Creek		indurated; gray; coarse sandstone with pebble lenses)	
LACM VP 7546-7547	N. side of Blake Parkway, W. of state highway 241	Capistrano Fm	Dolphin (Pontoporiidae), seal (Imagotariinae)	unknown
LACM VP 4666-4668	West of El Toro Road & north of Trabuco Road	Capistrano Formation, Oso Sand Member (cobble bed in sand)	Mammals, including eared seals (Otariidae), cetaceans (Cetacea)	22 ft bgs

VP, Vertebrate Paleontology; IP, Invertebrate Paleontology; bgs, below ground surface

This records search covers only the records of the Natural History Museum of Los Angeles County (“NHMLA”). It is not intended as a paleontological assessment of the project area for the purposes of CEQA or NEPA. Potentially fossil-bearing units are present in the project area, either at the surface or in the subsurface. As such, NHMLA recommends that a full paleontological assessment of the project area be conducted by a paleontologist meeting Bureau of Land Management or Society of Vertebrate Paleontology standards.

Sincerely,

Alyssa Bell, Ph.D.
Natural History Museum of Los Angeles County

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/15/2020 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<i>SADDLE BACK VALLEY O</i> EPA ID:: CAR000146894	<i>26891 VISTA TERRACE</i>	<i>E 1/8 - 1/4 (0.209 mi.)</i>	<i>F30</i>	<i>296</i>

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2020 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 4 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 4 UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

A review of the CERS HAZ WASTE list, as provided by EDR, and dated 07/20/2020 has revealed that there are 10 CERS HAZ WASTE sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 3 SWEEPS UST sites within approximately 0.25 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 11 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

Site Name: POLY FREEZE INC
Violation Date: 12/17/2015
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Not reported
Violation Division: Orange County Environmental Health
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-24-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct hazardous materials chemical inventory and business emergency plan inspection. I walked through the facility and inspected hazardous material storage areas. There has been changes in types of the hazardous material stored on site since last inspection. Business does not store 55 gallons of VM& P Naphtha anymore. Facility has the following hazardous materials that meet required disclosure quantities: - Acetone - 50% IPA/50% Water - IPA - 43 gallons liquid nitrogen Hazardous materials management training is provided annually in safety meetings. A copy of emergency plan is available on site. I assisted owner with correcting inventory forms, completed emergency plan, updated site map with evacuation area. All HMBP documents were submitted to CERS during inspection.
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 12-17-2015
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: Inspector Comments: Orange County Environmental Health as the Certified Unified Program Agency (OC CUPA) is the administrating agency for the Hazardous Materials Disclosure and Business Emergency Plan programs (HMD/BEP) previously administered by the Orange County Fire Authority. During on an onsite inspection conducted on 5/26/15, this Agency requested that you electronically submit HMD/BEP forms. Electronic submission of these forms is a legal requirement. Failure to submit HMD/BEP forms is in violation of the California Health & Safety Code Chapter 6.95. According to our records there is no electronic submission for this facility. Please go to www.esubmit.ocgov.com to request a username and password and submit the following HMD/BEP forms within the next 30 days: - Business Activities form - Owner/Operator Identification form - Hazardous Material Chemical Inventory forms - Facility Site Map - Business Emergency Plan Businesses may also submit forms via [Truncated]

Eval Date: 05-26-2015
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Inspector Comments: On site to conduct hazardous materials chemical inventory and business emergency plan inspection. Bruce and Matt Rocheleau assisted with the inspection. I walked through the facility and inspected hazardous materials storage area. The facility has the following hazardous materials that meet the required disclosure quantities: - 55 gallons of acetone - 110 gallons of 50% IPA - 55 gallons of VM& P Naphtha - 55 gallons of IPA - 165 liters liquid nitrogen Facility is required and has been notified to electronically submit the following documents within 30 days of this inspection: - Business Activities form - Owner/Operator Identification form - Hazardous Material Chemical Inventory forms - Facility Site Map - Business Emergency Plan Username and password was obtained during the inspection. I explained each component that needs to be uploaded with Bruce Rocheleau.

Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 05-09-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Documents submitted to CERS on 4/24/17 were reviewed and not accepted with the following considerations: Acetone form must be revised as follows: - Fire Code Hazard Classes must be changed to G Flammable Liquid - Class I-B.G - This material was stored in a 55 gallon drum during onsite inspection conducted by this agency on 5/26/15. Please verify and change Inventory Storage Information to G Steel DrumG if it is still stored in a drum rather than a G Tank Inside Building.G - Storage Pressure and Storage Temperature must be listed. Isopropyl Alcohol: Fire Code Hazard Classes must be changed to G Flammable Liquid - Class I-B.G Isopropyl Alcohol 50% DI Water: CAS# listed in Chemical Identification & Physical Properties should be deleted since this is not a pure material. Also, 110 gallons of this material was observed during onsite inspection conducted by this agency on 5/26/15. Please verify total volume of this material stored on site and update if [Truncated]

Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 08-23-2016
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Went to facility to assist business owner with uploading HMBP documents. There were issues with CERS when trying to sign in. I assisted owner in drawing map but could not upload anything since CERS support did not respond while I was on site.

Eval Date: 08-16-2016
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Inspector Comments: Went to site to assist business owner in submitting HMBP documents. Owner was not in site. I discussed outstanding violation regarding failure to submit HMBP documents electronically with employee, Matthew Rocheleau. He stated he thought that documents were already submitted. I let him know that E-submit is not in operation and that CERS is now the portal to be used. He stated that he will have business owner contact me.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Evaluation:
 Eval General Type: Other/Unknown
 Eval Date: 05-16-2017
 Violations Found: No
 Eval Type: Other, not routine, done by local agency
 Eval Notes: Reviewed two Facility information documents submitted to CERS on 4/21/17. Did not accept first one (submitted at 2:44 PM) due to incorrect billing address. Accepted the second one (submitted at 3:03 PM) and added comment regarding assuming "Canada" listed under Owner Address is a mistake and to delete it next submission. Updated new contact information in EC.

Eval Notes: I received two emails from Eric Quach, regarding reportable volumes for helium, nitrogen and argon gases. He also wanted to know the units that refrigerant (404A) must be reported. I responded to both emails.

Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 01-26-2015
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Documents submitted to E-submit on 1/16/15 were reviewed and declined with the following considerations: Documents for Building A & C submitted under this address must be removed and submitted separately. Refrigerant (Genetron R404A) must be removed since total volume stored on site is below new reportable quantity of 1000 cubic feet (effective January 2015). Site map titled G Lake Forest G Hazardous MaterialsG cannot be opened. Submittal of evacuation maps for each floor is not required. The last page of the evacuation maps titled G Emergency Exit Assembly AreaG is the only map that should be submitted.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-31-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Alcon Research, LLC Bldg. B On site to conduct new hazardous materials chemical inventory and business emergency plan inspection due to change in ownership, business is no longer part of Novartis Corporation. Eric Quach granted consent to conduct inspection. I walked through the facility and perimeter inspected hazardous material storage areas. There has been no changes in types and/or volumes of the hazardous material stored on site since last inspection or previous reporting period. Facility stores diesel 900 gallons diesel (inside backup generator) on site. Spill kit and fire extinguisher were observed in backup generator enclosure. Hazardous materials management training is provided annually and training records are available electronically. Emergency contact information is posted on the hazardous waste storage room door. Security personnel in reception area has a copy of emergency plan and employees are trained to contact security in event of [Truncated]

CERS ID: 10594003
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 28025
Site Name: Elite Automotive Services, LLC
Violation Date: 7/24/2017
Citation: 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 09/18/2017. Drums and 5 gallon buckets storing used oil filters are not closed since they are overfilled. Please be advised that used filter drum must be stored closed unless in active use. Lid must be obtained for the used oil filter drums/buckets within 30 days of this inspection.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-23-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Elite Automotive Services 26801 Vista Terrace Lake Forest, CA 92630 (949) 454-1000 On site to conduct new hazardous waste inspection. Ziaid Traieh granted consent to conduct inspection. Business moved into this facility in 5/2014. EPA ID# for this business is CAL000396671. I walked through the facility, perimeter and inspected waste storage area. I did not observe any hazardous waste in trash cans. Waste oil (3) and waste antifreeze (1) aboveground tanks are stored closed and labeled. Four waste oil filters drums are stored closed and labeled. There are no manifests to review since business is new. An emergency card was provided to be filled out and posted.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-24-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site to conduct hazardous materials chemical inventory and business emergency plan inspection. Eddie Yau granted consent to conduct inspection. I walked through the facility and inspected hazardous material storage areas. There has been no changes in types of the hazardous material stored but there has been changes in volume of waste antifreeze on site since last inspection or previous reporting period. Facility now has 110 gallons of waste antifreeze stored on site. Material shown on site map by the ramp in middle of the shop are no longer stored in that area. Please update waste antifreeze volume and site map in CERS within 30 days of this inspection. Hazardous materials management training is provided annually. Employee training records are not available on site. Please obtain training records and submit a copy to this agency within 30 days of this inspection. Emergency card is posted at the front entrance in a glass covered bulletin board.

Eval Notes: On site to conduct new hazardous materials chemical inventory and business emergency plan inspection. I walked through the facility and inspected hazardous materials storage area. Facility has hazardous materials that meet required disclosure quantities. Facility has requested username and password from this Agency and will be electronically submitting the following documents within 60 days of this inspection: - Business Activities form - Owner/Operator Identification form - Hazardous Material Chemical Inventory forms - Facility Site Map - Business Emergency Plan
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 11-25-2013
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct routine hazardous waste inspection. Khoder Doaifi granted consent to conduct inspection. The business has not been using PERC for sixteen months. The facility uses Green Earth and petroleum distillate solutions for dry cleaning. I walked through the facility and inspected waste storage area. All waste drums are stored closed and labeled. The "accumulation start date" on the labels is the date when the last waste pick up occurred. Please be advised that the "accumulation start date" should be written on the labels when 27 gallons of waste is stored on site, then have all waste hauled off site by a registered transporter for proper disposal within 180 days of that date. Manifests were reviewed. The hauler, American Industrial Services, has been listing the "Green Earth" waste as PERC on some of the consolidated manifests. Please be advised must submit a manifest correction letter (MCL) to DTSC, Generator Information Services Section. P. O. Box [Truncated]

the following considerations: Pyratex and Stree Tan are not reportable materials since the total volume of each chemical stored on site is not equal to or greater than 55 gallons. It not clear whether the reported K4 Solvent and Aliphatic hydrocarbon are waste or new material. If the reported material are waste, then the G pureG boxes must be changed to G wasteG and correct G state waste codeG , not facility EPA ID# as listed currently, be added to the form. In addition, the CAS#s should be moved from beneath the G Common NameG to the G Hazardous ComponentG section. If the material is new then the G pureG must be checked, the G annual waste amountG and G state waste codeG must be removed. The site map does not show the storm drain, show new material or waste drums separately or include a legend/key describing the symbols.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, - 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 02/14/2019. Overfill Prevention Equipment Inspection was not conducted by October 13, 2018. This inspection must be conducted and test results be submitted to this agency within 30 days of this inspection report.

Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 07/07/2017. Drum storing water contaminated with fuel was 2/3 full (contained more than 27 gallons of waste) before test water from today's test was poured in it. Accumulation time for this waste has been exceeded. This waste must be properly disposed of within 30 days of this inspection and copy of manifest be submitted to this agency.

Eval Notes: Captain Lopez from OCFA called OC Health at 5:30 to notify that a tanker truck has overflowed (aprox 5 gallons per cashier). A concerned citizen called 911. As Fire arrived on scene cashier was washing tank pad down with water. Approximately 30 gallons of water per fire. Fire bermed up gas/water mixture before it hit the storm drain. Fire informed owner that a clean up company needs to be called for proper clean up. Arrived on scene fire had already left. Arrived to witness the cashier (Max Yavavi) rolling up water hose. Gas/water mixture has traveled off site but did not hit the storm drain. Pictures taken on this date. Interviewed Max, he indicated that the there was an overfill and was told by trucking company to wash down tank pad. Asked cashier if OES has been notified. He indicated that he did not know who that was. He called the owner to come down and meet us. Owner Adam Nick arrived on scene and interviewed, he indicated that he also did not call [Truncated]

Eval Type: Routine done by local agency
Eval Notes:

On site to witness monitoring system certification testing activities and to conduct routine UST inspection. The turbine sump sensors alarmed properly (visual and audible) and shut down respective turbine when submerged in water. The fill sump sensors are not programmed to shut down the turbines and functioned properly (visual and audible) when submerged in water. The 87 Main, 91 and diesel annular sensors could not be tested due to ripped strings. The 87 auxiliary annular sensor alarmed properly (visual and audible) and shut down the turbine when submerged in water. The strings were replaced during the inspection and passed when retested. The UDCs have Bravo boxes with float and chain mechanism. Water was poured in all UDCs and all float and chains functioned properly. Fail-safe and sensor were tested and passed. Line leak detectors were tested and passed. All ATGs were tested and passed test with the enunciator functioning properly. Spill buckets [Truncated]

Eval Division: Orange County Environmental Health
Eval Program: UST
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 06-15-2016
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: Inspector Comments: Please be advised that this Agency has reviewed the file for this facility. The last monitoring system certification testing for this facility was conducted on 6/9/15. Monitoring system certification test must be conducted annually. Monitoring system certification test must be scheduled and conducted by 6/28/16 to correct the violation listed above and avoid any enforcement action.

Eval Type: Routine done by local agency
Eval Notes: On site to witness monitoring system certification activities and conduct routine UST inspection. Annular and turbine sump sensors alarmed properly (visual and audible) and shut down respective turbine when submerged in water. The annular sensor in 87 auxiliary tank was replaced, like for like, during inspection since turbine would not start when sensor was placed back into tank. New sensor was tested and functioned properly. Fill sump sensors are not programmed to shut down the turbines and functioned properly, visual and audible alarm, when submerged in water. UDCs have Bravo boxes with float and chain mechanism. Water was poured in all UDCs with floats. A float in UDC 7/8 did not function properly due to loose chain. Chain was tightened and passed when retested. Fail-safe and sensor out were tested and passed. Overfill Prevention Equipment Inspection was conducted at the site on 1/22/19 Line leak detectors testing was not witnessed by this [Truncated]

Violations:
Site ID: 413349
Site Name: GENERAL MONITORS
Violation Date: 6/9/2014
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 06/09/2014. The solder dross drum in the solder flow room and satellite container storing paste jars/wipes in the Surface Mount Technology area were not labeled. The drum and container were labeled during the inspection. This violation was corrected during the inspection.
Violation Division: Orange County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 413349
Site Name: GENERAL MONITORS
Violation Date: 6/9/2014
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for three years.
Violation Notes: Returned to compliance on 05/27/2015. Bills of lading for universal waste are not available for review. Please obtain copies of bills of lading for the universal waste.
Violation Division: Orange County Environmental Health
Violation Program: HW
Violation Source: CERS

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 02-27-2015
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Documents submitted to E-submit on 2/17/15 have been reviewed and declined with the following considerations: Carbon Monoxide in Air: This material is reported as a G mixture. G However 100% Carbon Monoxide in Air is listed as the Hazardous Component section. This appears incorrect since the material is a mixture of carbon monoxide and air. Therefore at a minimum, %WT and CAS# (630-08-8) for carbon monoxide must be listed in the Hazardous Component section at the bottom of the form. Ethylene in Nitrogen: CAS# listed for nitrogen (7727-37-974-85-1) in Hazardous Component section is incorrect and must be changed to 7727-37-9.

Eval Notes: Documents submitted have been reviewed and declined due to error made by this Agency in last review. Please correct/change CAS# for Carbon Monoxide on Carbon Monoxide in Air form, from 630-08-8 to 630-08-0.

Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-09-2014
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site to conduct routine hazardous waste inspection. Kenn Ramas granted consent to conduct inspection. I walked through the facility, perimeter and inspected waste storage areas. I did not observe any hazardous waste in trash cans or municipal trash. The recovery still unit that generated solder flux waste is not in use since the facility has purchased a new wave solder machine that does not generate solder flux waste. Solder paste jars/wipes drum is stored closed and labeled. The solder waste drum in the flow solder room is stored closed and was labeled during inspection. Waste ink containers in the ampoule room and storage shed are stored closed and labeled. The satellite container storing paste jars/wipes in the Surface Mount Technology area was labeled during the inspection. Manifests for the hazardous waste were reviewed. Bills of lading for universal waste are not available for review. Please obtain copies of bills of lading for the universal waste. [Truncated]

CERS:

Name: SADDLEBACK VLY ORANAMENTAL IRON INC
Address: 26881 VISTA TERRACE
City,State,Zip: LAKE FOREST, CA 92630
Site ID: 413612
CERS ID: 10717657
CERS Description: Chemical Storage Facilities

Evaluation:

Eval General Type: Other/Unknown
Eval Date: 02-24-2016
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Accepted annual certification documents submitted to E-submit on 2/18/16.
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-23-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Saddleback Vly Ornamental Iron Inc. 26881 Vista Terrace Lake Forest, CA 92630 (949) 830-9153 On site to conduct new hazardous materials chemical inventory and business emergency plan inspection. I walked through the facility and inspected hazardous materials storage area. The facility has the hazardous materials that meet the required disclosure quantities. Facility conducts employee training and maintains records of topics covered and employees trained. Records are maintained at 26891 Vista Terrace. All required documents have been electronically submitted to E-submit and will be reviewed for approval by this Agency.

Eval Date: 07-25-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct hazardous materials chemical inventory and business emergency plan inspection. Tom Buchanan granted consent to conduct inspection. I walked through the facility and inspected hazardous material storage areas inside building. Propane cylinders are chained to wall and oxygen cylinders are in an cage/enclosure. There has been no changes in types and/or volumes of the hazardous material stored on site since last inspection or previous reporting period. Updated site map showing hazardous waste drums/boxes inside building was submitted to CERS during inspection. Business Emergency Plan and disclosure information is available electronically. Inventory forms were corrected during inspection. Hazardous materials management training is provided annually. Employee training records with topics covered are available for review. Site map with evacuation routes are posted throughout facility. Emergency contact information is posted on a board [Truncated]
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 01-03-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Received email from facility contact, Tom Buchanan indicating that two CERS ID#s with same address are assigned to his businesses. I looked in CERS. CERS ID#s were for different addresses. I emailed a copy of Business Activities form for CERS ID# 10540471 with this site's address to him. I also mentioned that the Fire Code Hazard Classes were not transferred from E-submit and for him to add them to inventory forms.
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 07-25-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Reviewed and accepted documents submitted to CERS on 7/25/17 that included updated map showing location of hazardous waste inside building.
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval Type: Other, not routine, done by local agency
Eval Notes: Reviewed and accepted revised documents submitted to E-submit on 3/23/16.
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-21-2016
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Inspector Comments: On site to conduct hazardous materials chemical inventory and business emergency plan inspection. Craig Welence and Joel Azpuru assisted in conducting inspection. I inspected hazardous materials storage area in a lab. All required HMBP documents have been submitted to E-submit and reported material/inventory was verified. Facility has neon/fluorine gas cylinders at reportable volume. Employees are trained in hazardous material management and evacuation procedures. Training records are maintained are available electronically. Business emergency plan is available online.

Eval General Type: Other/Unknown
Eval Date: 11-21-2016
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Submitted RUR to change status of site from "04" to "01."
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 07-31-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Alcon Research, LLC Bldg. C On site to conduct new hazardous materials chemical inventory and business emergency plan inspection due to change in ownership, business is no longer part of Novartis Corporation. Eric Quach granted consent to conduct inspection. I walked through the facility and perimeter inspected hazardous material storage areas. There has been no changes in types of hazardous material stored on site since last inspection or previous reporting period. Facility is now storing nitrogen gas in addition to fluorine/neon gas mixture. Hazardous materials management training is provided annually and training records are available electronically.

Site ID: 541454
CERS ID: 841678
CERS Description: Industrial Facility Storm Water

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-09-2016
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: Regional Board staff (staff) conducted a No Exposure Certification (NEC) inspection of the above facility on August 08, 2016. The facility had exposed industrial material and untarped scrap metal 40 yard roll off. Mr. Buchanan stated that the facility was constructing an awning for the industrial material and required time. The facility must correct these issues by August 30, 2016. On August 30, 2016, the facility corrected the issues by constructing the awning and tarping the scrap metal 40 yard roll off. No other industrial activity was exposed to storm water and thus the facility meets the requirements of the NEC as defined in the Industrial General Permit. No further action is required.

Site ID: 413613
CERS ID: 10540471
CERS Description: Chemical Storage Facilities

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 01-03-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Received email from facility contact, Tom Buchanan indicating that two CERS ID#s with same address are assigned to his businesses. I looked in CERS. CERS ID#s were for different addresses. I emailed a copy of Business Activities form for CERS ID# 10540471 with this site's address to him. I also mentioned that the Fire Code Hazard Classes were not transferred from E-submit and for him to add them to inventory forms.

Violation Notes: leak.
Returned to compliance on 05/17/2017. Used oil filter drum does not have a lid. Please be advised that used filter drum must be stored closed unless in active use. A lid must be obtained for the used oil filter drum within 30 days of this inspection.

Violation Division: Orange County Environmental Health
Violation Program: HW
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-03-2017
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site to conduct routine hazardous waste inspection. Glenn Larson granted consent to conduct inspection. I walked through the shop, perimeter and inspected waste storage areas. I did not observe any hazardous waste in trash cans. Waste oil tanks, stored outside building in an enclosure is kept closed and labeled. Waste antifreeze drum is stored closed and labeled. Used oil filter drum is labeled but does not have a lid. Hauler did not provide a lid. Please be advised that used filter drum must be stored closed unless in active use. A lid must be obtained for the used oil filter drum. Manifests were reviewed. Emergency card is posted in the office on a file cabinet.

Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 05-17-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: On site for follow up inspection to correct outstanding violation I617, regarding failure to properly close hazardous waste containers when not in use, cited during routine inspection conducted on 4/3/17. Used oil filter drum has a lid and stored closed. Violation has been corrected.

Eval Division: Orange County Environmental Health
Eval Program: HW
Eval Source: CERS

Eval General Type: Other/Unknown
Eval Date: 05-18-2017

Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 05-14-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct hazardous materials chemical inventory and business emergency plan inspection. Glenn Larsen granted consent to conduct inspection. I walked through facility and inspected hazardous material storage areas inside and outside facility. There has been changes in volumes and locations of the hazardous material stored on site since last inspection or previous reporting period. Volume of new antifreeze stored on site has decreased from 110 gallons to 55 gallons. Also, location of waste and new antifreeze has changed. Facility stores the following hazardous materials at disclosure threshold: - 55 gallons of new antifreeze - 55 gallons of waste antifreeze - 240 gallons of waste oil - 324 gallons of new motor oil Hazardous materials management training is provided annually and records are available for review. New Emergency Response Notification & Contingency Plan Card was filled out to be posted in the shop. I assisted business with [Truncated]

Eval Type: Routine done by local agency
Eval Notes: On site to conduct routine hazardous waste inspection. Glenn Larsen granted consent to conduct inspectioN. I walked through shop, perimeter and inspected waste storage areas inside and outside facility. I did not observe any hazardous waste in trash cans or municipal trash. Waste oil tank, stored outside building in a cement enclosure, is kept closed and labeled. Waste antifreeze (1) and used oil filter (1) drums are stored closed and labeled. Manifests were reviewed. Emergency card is posted in the office on a file cabinet. New Emergency Response Notification & Contingency Plan Card was filled out to be posted in the shop.

Eval Type: Routine done by local agency
Eval Notes: Onsite to conduct a routine hazardous waste inspection. Met with Glenn Larsen. Inspected used oil, drained used oil/fuel filters, hot tank, and waste antifreeze. Drums and tanks were provided with a lid, stored in a secure manner and appear to be in good condition. The operator completes a maintenance inspection on the drums and tanks on a weekly basis. A Hazardous Waste label was noted on all drums and tanks with the required identification. Municipal dumpster area does not appear to contain any hazardous waste. Perimeter of facility inspected - did not observe any water runoff or staining at this time. Hazardous Waste Emergency Response plan was available for review. Manifests and bills of lading for all hazardous waste streams were reviewed today. Ensure all hazardous waste manifests/disposal documents are maintained on site for at least three years from the date of transport and are available for review during normal business hours. Eval Notes: On site to conduct hazardous materials chemical inventory and business emergency plan inspection. Glenn Larsen granted consent to conduct inspection. I walked through the facility and inspected hazardous material storage areas. There has been changes in types and/or volumes and locations of the hazardous material stored on site since last inspection or previous reporting period. Facility has the following hazardous materials that meet the required disclosure quantities: - 324 gallons of new oil - 240 gallons of waste oil - 110 gallons of new

Eval Notes: HMBEP declined in E-Submit. The following notes were included in the review: "Provide CAS#G s for all pure materials and waste/mixture components. Provide percent weights for all mixture components. You have waste in you chemical inventory, but have not provided an EPA ID# on the business activities page. Please check the box next to G generate hazardous wasteG and provide an EPA ID#. Complete all parts of the emergency plan section. The question regarding an emergency response team should only be answered if it applies to your facility."

Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Aesthetic impairment would include nuisance from a waste treatment facility.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Description: Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 09/26/2016. Please be advised that in the inspection report dated 8/23/13, this Agency requested electronic submittal of the hazardous materials inventory and business emergency plan within 30 days of that date. To date, the required documents have not been submitted. The following documents must be submitted: - Business Activities form - Owner/Operator Identification form - Hazardous Material Chemical Inventory forms - Facility Site Map - Business Emergency Plan

Violation Division: Orange County Environmental Health
Violation Program: HMRRP

Eval Notes: Nakase Brothers Nursery 20621 Lake Forest Dr. Lake Forest, CA 92630
Inspector Comments: On site to conduct new aboveground petroleum storage tank (APST) inspection since facility has between 1,320 and 9,999 gallons of regulated petroleum products stored on site. Eliazar Najera granted consent to conduct inspection. Facility has the following APSTs: - 240 gallons of gasoline - 1600 gallons of diesel - 220 gallons of new oils (including hydraulic and gear oil) - 110 gallons of waste oil APSTs (tanks and drums) are exempt from requirement to prepare a spill prevention control and countermeasure (SPCC) plan since containers are located and operated by a nursery.

Submission. Email sent to contact smnakase@nakasebros.com: - NOV was
hand delivered by HCA/Fard on 5-18-2015 _____ Good Morning, If you are
receiving this email, you have started to complete the Hazardous
Materials Disclosure and Business Emergency Plan (HMD/BEP) on the
eSubmit Portal for OC CUPA in response to a Notice of Violation (NOV)
issued to your associated facility in March of 2015 via Certified
Mail. The letter states that the HMD/BEP needed to be complete by May
1, 2015, or the violations issued in October of 2014 will be elevated
to Class I, which will require formal Enforcement by this Agency which
includes a mandatory financial penalty. In reviewing the facilities
that received the NOV, your facility still shows as G Not SubmittedG .
However, in reviewing from the admin side of the portal, it appears
that all, none or most [Truncated]

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/28/2020	Source: EPA
Date Data Arrived at EDR: 11/05/2020	Telephone: N/A
Date Made Active in Reports: 11/25/2020	Last EDR Contact: 12/02/2020
Number of Days to Update: 20	Next Scheduled EDR Contact: 01/11/2021
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/28/2020	Source: EPA
Date Data Arrived at EDR: 11/05/2020	Telephone: N/A
Date Made Active in Reports: 11/25/2020	Last EDR Contact: 12/02/2020
Number of Days to Update: 20	Next Scheduled EDR Contact: 01/11/2021
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/28/2020

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 10/28/2020	Source: EPA
Date Data Arrived at EDR: 11/05/2020	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/15/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/22/2020	Telephone: (415) 495-8895
Date Made Active in Reports: 09/18/2020	Last EDR Contact: 09/22/2020

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/22/2020	Telephone: (415) 495-8895
Date Made Active in Reports: 09/18/2020	Last EDR Contact: 09/22/2020
Number of Days to Update: 88	Next Scheduled EDR Contact: 01/04/2021

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/15/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/22/2020	Telephone: (415) 495-8895

Number of Days to Update: 88	Next Scheduled EDR Contact: 01/04/2021
	Data Release Frequency: Quarterly

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/15/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 06/22/2020	Telephone: (415) 495-8895

Federal institutional controls / engineering controls registries

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 08/06/2020	Source: Department of the Navy
Date Data Arrived at EDR: 08/21/2020	Telephone: 843-820-7326
Date Made Active in Reports: 11/11/2020	Last EDR Contact: 11/05/2020
Number of Days to Update: 82	Next Scheduled EDR Contact: 02/22/2021
	Data Release Frequency: Varies

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 10/28/2020	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/05/2020	Telephone: 703-603-0695
Date Made Active in Reports: 11/18/2020	Last EDR Contact: 11/05/2020
Number of Days to Update: 13	Next Scheduled EDR Contact: 03/08/2021
	Data Release Frequency: Varies

US INST CONTROLS: Institutional Controls Sites List

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 10/28/2020	Source: Environmental Protection Agency

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Number of Days to Update: 74	Next Scheduled EDR Contact: 01/04/2021
	Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 03/18/2020
Date Data Arrived at EDR: 03/19/2020

Number of Days to Update: 20	Next Scheduled EDR Contact: 01/11/2021
	Data Release Frequency: Semi-Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 08/31/2020	Source: DTSC and SWRCB

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 617-520-3000

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Elevation:	729 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5636489 EL TORO, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: YORBA

Soil Surface Texture: cobbly sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	cobbly sandy loam	Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 5.1
2	7 inches	35 inches	very gravelly clay loam	Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 5.1
3	35 inches	62 inches	very gravelly sandy loam	Not reported	Not reported	Max: 14 Min: 4	Max: 8.4 Min: 5.1

Soil Map ID: 2

Soil Component Name: RIVERWASH

Soil Surface Texture: sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 31 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	5 inches	sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: Min:
2	5 inches	59 inches	stratified coarse sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: Min:

Soil Map ID: 3

Soil Component Name: CIENEBA

Soil Surface Texture: sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558

Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRRA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.
